

**Cover**

The crystal structure of particulate methane monooxygenase (pMMO) reveals many unexpected features including, a trimeric oligomerization state and three distinct metal centers. Image reproduced by permission of Amy Rosenzweig from *Dalton Transactions*, 2005.

Preface	7
<i>John S. Davies</i>	
<hr/>	
Amino acids	19
<i>Marta Zarandi</i>	
Introduction	19
Naturally occurring amino acids	19
Chemical synthesis and resolution of amino acids	22
Physical and stereochemical studies of amino acids	59
Chemical studies of amino acids	60
Analytical methods	63
<hr/>	
Peptide synthesis	82
<i>Donald T. Elmore</i>	
Introduction	82
Methods	82
Appendix: A list of syntheses in 2003–2004	98

Analogue and conformational studies on peptides, hormones and other biologically active peptides 131

Botond Penke, Gábor Tóth and Györgyi Váradi

Introduction	131
Peptide backbone modifications and peptide mimetics	131
Cyclic peptides	139
Biologically active peptides	141
Enzyme inhibitors	176
Phage library leads	206
Protein–protein interaction inhibitors: SH2 and SH3 domain ligands	206

Cyclic, modified and conjugated peptides 227

John S. Davies

Introduction	227
Cyclic peptides	227
Modified and conjugated peptides	257
Miscellaneous structures	271

Metal complexes of amino acids and peptides 287

E. Farkas and I. Sóvágó

Introduction	287
Amino acid complexes	288
Peptide complexes	312
