Chapter 1 Industrial Applications of Radioisotopes

By J. A. Heslop

1 Radiotracers	1
Flow Measurements	3
Leak Detection	6
Material Movement and Residence-time Distributions	6
Residence-time Distributions	7
Mass-balance and Chemical Reaction Studies	8
Wear	9
2 Sealed-source Techniques	10
γ -Ray Absorption	10
Level and Interface Measurements	11
Density and Particle-size Measurements	12
Thickness Gauges	15
3 Analytical Applications of Radiometric Instruments	17
γ -Ray Absorption	17
Radioisotope-induced X -Ray Fluorescence	17
Backscatter Analysis	20
Neutron Methods	21
Neutron Sources	21
Neutron Absorption	22
Neutron Thermalization	23
Neutron Activation Analysis	25
Well Logging	30
Radiography	31
γ -Radiography	31
Neutron Radiography	32

Chapter 2 Activation Analysis in Archaeology

By G. Harbottle

1 Introduction	33
2 Nuclear Activation of Archaeological Materials	36
3 Interpretation of Analytical Data in Provenience Studies	42
The Data Matrix and its Transformations	43
The Hypergeometric Distance Matrix	46
Cluster Analysis	49

Single Linkage	49
Complete Linkage	50
Average Linkage and Centroid	50
Size-of-Cluster Methods	50
Iterative Clustering	51
The Presentation of Cluster Analysis Results: Dendrograms	52
Correlation Effects, Group Properties, and Mahalanobis Distance	52
Principal Components Analysis	58
Computer Programs	59
Summary	60
4 Application of Nuclear Techniques to Specific Classes of Archaeological Material	60
Ceramic Provenience Studies	61
Ancient Glass and Faience	65
Obsidian	66
Precious Metals and Coins	66
Turquoise, Jade, and Amber	68
Other Stones of Archaeological Interest: Sandstone, Steatite, Sanukite, Marble, and Flint	69
Steel, Bronze, Copper, and Lead	70
5 Conclusions	71

Chapter 3 Preparation of Radiopharmaceuticals and Labeled Compounds using Short-lived Radionuclides

By D. J. Silvester

1 Introduction	73
2 Sources of Short-lived Radionuclides	74
Nuclear Reactors	75
Charged-particle Accelerators	75
Radionuclide-generator Systems	76
3 Carbon-11	76
Syntheses with $^{11}\text{CO}_2$	78
Syntheses with H^{11}CN	82
4 Nitrogen-13	82
5 Oxygen-15	85

6 Fluorine-18	85
¹⁸ F Intermediates	87
Preparation of Specific ¹⁸ F-Organic Compounds	88
7 Bromine-77	90
8 Iodine-123	91
Direct Production of ¹²³ I	91
Indirect Production of ¹²³ I	92
¹²³ I-Labelled Compounds	93
9 Astatine-211	96
10 Other Radionuclides	97
Gallium-67 and -68	98
Indium-111 and -113m	100
Technetium-99m	103
Lead-203	105
Miscellaneous Radionuclides	107

Chapter 4 Sample Preparation Procedures for Liquid Scintillation Counting

By B. W. Fox

1 Introduction	108
2 Basic Design of Instrumentation and Scintillation Vials	109
3 Solvents and Solutes in the Scintillator System	110
4 Homogeneity and Heterogeneity	112
5 Preprocessing for Homogeneous Liquid Scintillation Counting	112
6 Inorganic Ions	113
7 Combustion Methods	114
8 Solubilization Methods	115
9 Cerenkov Light Measurement	116
10 Preprocessing for Heterogeneous Liquid Scintillation Counting	117
11 Monitoring of Continuous-flow Systems	118

12 Scintillant in the Liquid Phase	118
13 Colloidal Scintillation Counting	121
14 Correction Procedures, Artefacts, and Data Processing	122
15 Chemiluminescence and Phosphorescence	125
16 Biochemical Applications	126
17 Radioimmunoassay and Related Techniques	128
18 Archaeological and Hydrological Applications	130
19 Miscellaneous Applications	131
