<b>Chapter 1 Microscopic Approaches to Physisorption: Theoretical and Experimental Aspects</b>	<b>1</b>
<i>By U. Landman and G. G. Kleiman</i>	
<b>1 Introduction</b>	<b>1</b>
<b>2 Theoretical Approaches for the Study of Physisorption</b>	<b>2</b>
Introduction	2
van der Waals Forces and Physical Adsorption	5
Semi-empirical Calculations	19
Fundamental Calculations of Physisorption Binding Energies	21
<b>3 Microscopic Experimental Methods for the Study of Physisorption</b>	<b>33</b>
Introduction	33
General Introductory Remarks	33
On the Use of UPS in Characterization of the Physisorption State	34
Experimental Techniques for the Study of Atomic Arrangement in Physisorption Systems	39
LEED: Background Remarks	40
LEED Studies of Physisorption Systems	43
Neutron Scattering: Background Remarks	56
The Adsorption of N <sub>2</sub> and <sup>36</sup> Ar on Graphite	60
The Study of Thermal Vibrations using LEED	62
Low Energy Molecular (Atomic) Beam Scattering (LEMS)	66
Experimental Observations. Scattering Regimes	68
Experimental Observations. Diffraction of Rare Gases from Metals	70
Experimental Observations. Selective Adsorption	74
On Interaction Potentials used in Theoretical Analysis of LEMS	77
Experimental Techniques for the Study of the Electronic Structure of Physisorbed Systems	82
Ultraviolet Photoemission Spectroscopy (UPS)	82
X-Ray Photoemission Spectroscopy (XPS)	85
Electron Energy Loss Spectroscopy (EELS)	90
Field Emission Techniques	90
Field Emission and the Probe-hole Techniques	92
Field Emission. Theoretical Considerations	94

Measurement of Adsorption Isotherms <i>via</i> Electron Spectroscopy	97
Auger Electron Emission in Adsorption Isotherm Studies	100
<b>4 Conclusion</b>	<b>103</b>
<b>Chapter 2 57-Iron Conversion Electron Mössbauer Spectroscopy</b>	<b>106</b>
<i>By M. J. Tricker</i>	
<b>1 Introduction</b>	<b>106</b>
<b>2 Principles of the Mössbauer Effect</b>	<b>106</b>
<b>3 Interaction of the Nucleus with its Environment</b>	
Chemical Isomer Shift	108
Quadrupole Interaction	109
Magnetic Interaction	109
Spectral Areas	110
<b>4 Surface Studies</b>	<b>111</b>
<b>5 Internal Conversion</b>	<b>113</b>
<b>6 Theory of the Attenuation of <sup>57</sup>Fe Conversion Electrons</b>	<b>115</b>
<b>7 <sup>57</sup>Fe CEMS Experimental Considerations</b>	<b>116</b>
<b>8 Probing Depth and Sensitivity</b>	<b>120</b>
<b>9 Applications</b>	<b>127</b>
Corrosion and Oxidation Studies	127
Surface Phase Analyses of Steels	130
Surface Stress Measurements	131
Ion Implantation Studies	131
Applications in Geochemistry	134
<b>10 Depth Selective <sup>57</sup>Fe CEMS</b>	<b>137</b>
<b>11 Conclusions</b>	<b>138</b>
<b>Chapter 3 The Interplay of Theory and Experiment in the Field of Surface Phenomena on Metals</b>	<b>139</b>
<i>By Z. Knor</i>	
<b>1 Introduction</b>	<b>139</b>
<b>2 Bare Metal Surfaces</b>	<b>139</b>
Theoretical Models of Metal Surfaces	139
Comparison of Theoretical and Experimental Results	151

<b>3 Chemisorption of Gas Molecules on Transition Metal Surfaces</b>	<b>160</b>
Model Representation of the Gas–Metal System	160
CFSO–BEBO Approach	162
The Localized Free Electron Interplay Model	163
The Comparison of Theoretical and Experimental Results	167
<b>4 Conclusion</b>	<b>178</b>
<b>Chapter 4 Angle-resolved Ultraviolet Photoelectron Spectroscopy of Clean Surfaces and Surfaces with Adsorbed Layers</b>	<b>179</b>
<i>By D. R. Lloyd, C. M. Quinn, and N. V. Richardson</i>	
<b>1 Introduction</b>	<b>179</b>
<b>2 Photoemission from Clean Surfaces</b>	<b>180</b>
Theory	180
Comparisons with Angle-resolved Spectra	189
<b>3 Angle-resolved Spectra of Adsorbed Species</b>	<b>205</b>
Theory	205
Comparison with Experiment	211
<b>Chapter 5 Point Defects in Ionic Crystals</b>	<b>218</b>
<i>By J. Corish, P. W. M. Jacobs, and S. Radhakrishna</i>	
<b>1 Introduction</b>	<b>218</b>
<b>2 Intrinsic Defect Parameters</b>	<b>219</b>
Self-diffusion	219
Ionic Conductivity	221
<b>3 Impurity Defect Parameters</b>	<b>227</b>
Diffusion of Impurities	227
Impurity–Vacancy Complexes	228
<b>4 Theoretical Calculation of the Properties of Point Defects</b>	<b>234</b>
Defect Energies: Methods	234
Defect Energies: Results	235
Defect Interactions	243
Rare Gas Diffusion in Ionic Crystals	245
Defect Entropies	245
<b>5 Fast Ion Conduction</b>	<b>246</b>
Ag <sup>+</sup> and Cu <sup>+</sup> as Fast Ion Conductors	247
Fast Conduction by Alkali Ions	249
Anionic Fast Conduction	251

<b>6 Paraelectric Impurities</b>	252
Static and Dynamic Behaviour of PEC	252
Devonshire Model	253
Multi-well Potential Tunnelling Model	253
Experimental Techniques and Data	254
Electro-optical Technique	254
Electrocaloric Method	255
Specific Heat Measurements	255
Paraelectric Resonance	255
The Kerr Effect Method	255
<b>7 Molecular Impurities</b>	258
Diatomic Molecular Ions	258
Triatomic Molecular Ions	262
Planar Molecular Ions	262
Molecular Ions of Tetrahedral Symmetry	263
Complex Molecular Ions	266
<b>8 Impurity Ions with the S<sup>2</sup> Configuration</b>	269
Emission	276
<b>Chapter 6 Assessment of Crystal Perfection by   X-Ray Topography</b>	280
<i>By B. K. Tanner</i>	
<b>1 Introduction</b>	280
<b>2 Techniques of X-Ray Topography</b>	281
Laboratory X-Radiation Techniques	281
The Berg-Barrett Topography	281
The Lang Technique	282
The Double Crystal Method	284
X-Ray Topography using Synchrotron Radiation	288
Direct Viewing of X-Ray Topographs	289
<b>3 Contrast on X-Ray Topographs</b>	290
Perfect Crystal Phenomena – Pendellösung	290
Contrast of Dislocations	294
Contrast of Stacking Faults	298
Contrast of Twins and Sub-grains	300
<b>4 Applications to Crystal Defect Studies</b>	300
Crystal Growth	300
Metallurgy and Plastic Deformation	303
Mineralogy	304
Control of Electronic Devices	305
Oxidation Studies	307

<i>Contents</i>	ix
<b>Chapter 7 The Plasticity of Highly Plastic Molecular Crystals</b>	308
<i>By R. M. Hooper and J. N. Sherwood</i>	
<b>1 Introduction</b>	308
<b>2 High Temperature/Low Stress Deformation – Self-diffusion Control</b>	309
<b>3 Low Temperature/High Stress Deformation – Dislocation Slip</b>	314
Evaluation of Dislocation Energies	317
<b>4 Conclusions</b>	319
<b>Chapter 8 The Ultrastructure of Minerals as Revealed by High Resolution Electron Microscopy</b>	320
<i>By J. L. Hutchison, D. A. Jefferson, and J. M. Thomas</i>	
<b>1 Introduction</b>	320
<b>2 The Etch-decoration Technique and its Use in the Detection of Stacking Faults</b>	323
<b>3 Pyroxene Minerals</b>	326
Structures	327
Enstatite Polymorphism	328
Orthopyroxenes	330
Clinopyroxenes	331
<b>4 Pyroxenoids</b>	333
Wollastonite	333
Planar Defects in Wollastonite	334
Linear Defects and other Anomalous Features in Wollastonite	335
Other Pyroxenoids	336
<b>5 Amphiboles</b>	337
Exsolution in Amphiboles	339
<b>6 Serpentine Materials</b>	340
Chrysotile	340
Antigorite	341
Lizardite	342
Polygonal Serpentine	342
Garnierites	342
<b>7 Silicates based on the Mica Type of Layer</b>	343
Mica Group	343
Chlorite Group	346
Zussmanite	347
Stilpnomelane	348

<b>8 Orthosilicates</b>	349
Chloritoid	349
Mullite	352
<b>9 Graphite and its Intercalates</b>	353
<b>10 Sulphides</b>	354
4C Pyrrhotite	354
Intermediate ( <i>nC</i> ) Pyrrhotite	355
<i>nA</i> Pyrrhotite	356
Smythite, Fe <sub>3</sub> S <sub>4</sub>	356
Troilite, FeS	356
<b>11 Fluorocarbonates</b>	357
 Author Index	 359
