Chapter 1 The Theory of the Macroscopic Properties of Isotropic Dielectrics

By B. K. P. Scaife

1 Introduction	1
2 Basic Considerations	2
3 The Relative Permittivity for Static Fields	8
4 The Relative Permittivity for Time-varying Fields	10
5 The Macroscopic Significance of $\epsilon(\omega)$	19

Chapter 2 Dielectric Relaxation and Molecular Correlation

By G. Wyllie

1 Introduction	21
2 Dielectric Response	22
Relaxation of Thermal Fluctuations	24
Relation to a Noise Current	25
3 Relaxation in some Model Systems	26
Diffusive Migration of a Charged Object, without Inertial Effects	26
Two-site Model	26
Alternative treatment	27
Asymmetric two-site model	28
Relaxation in constant field	28
Reversible dipole	29
Exponential decay	29
Three Sites in a Row	30
Two relaxation rates	30
Continuous Diffusion	30
Relaxation by rectilinear diffusion	31
Diffusion on a circular track	32
Diffusion on a spherical surface	33

Random Motion of Objects with Inertia	33
Linear Motion of a Brownian Particle	34
Undamped motion in an oscillator potential	35
Undamped thermal motion between reflecting boundaries	35
Brownian motion in an oscillator potential	36
Brownian motion between reflecting walls	37
Brownian motion on circle and sphere	38
Brownian Motion of a Rigid Body	39
Scattered rotation of a linear molecule	40
Scattered rotation of a spherical top	41
General Random Rotation in one Plane	41
Gaussian processes	43
Libration in a Constraining Potential	43
Libration in a two-well potential	44
Itinerant Oscillator	45
Simple Forms of Correlation Function	47
General Linearized Brownian Motion	49
Correlation by Computation of Molecular Dynamics	50
Relaxation of Interacting Dipoles	52
Long-range Dipole Correlations	53
Onsager model—reaction field effects	53
Onsager model with generalized mechanical behaviour	54
Relaxation in Insulating Crystals	55
Relaxation near a ferroelectric transition	56
Fluctuating Dipoles	58
Simultaneous Rotation and Fluctuation	58
Collision-induced Dipoles	59
Collisions of Polyatomic Molecules	60
Collision-induced Absorption in Liquids	61
Polymer Relaxation	62
4 Conclusion	63
5 Appendix	63
Chapter 3 Dielectric Polarization in Gases	
<i>By H. G. Sutter</i>	
1 Introduction	64
2 Theory	64
Polarizability of an Isolated Molecule	70
Multipole Moments of Isolated Molecules	71

The Pair Polarizability α_{12}	72
The Pair Dipole Moment μ_{12}	76
The Intermolecular Potential u_{12}	77
3 Measurement Techniques	79
Measurement of ϵ_r	80
Measurement of V_m	80
4 Results and Their Interpretations	83
A_e	83
B_e of Atomic Gases	83
B_e of Non-dipolar, Molecular Gases	84
B_e of Dipolar Gases	87
B_e for Mixtures	90
C_e and Higher Coefficients	94
Summary	94
Appendix	95

Chapter 4 Time Domain Methods

By A. Suggett

1 Introduction	100
2 Slow Response Techniques	101
Experimental Methods	101
Application to Polymeric Materials	104
3 Fast Response Techniques	104
Time Domain Spectroscopy	104
Basic Theory	105
Experimental Methods	106
Application to Dielectric Measurements	112
Polar Liquids	112
Water and Aqueous Solutions	114
Polymers	115
Some Theoretical Considerations	115
Future Developments	118

Chapter 5 Dielectric Properties of Water and of Aqueous Solutions

By J. B. Hasted

1 Introduction	121
2 Current Ideas on the Structure of Water	123

3	Calculations of Static Electric Permittivity	129
4	The Dielectric Properties of Water at Very High Frequencies	135
5	Static Permittivity of Aqueous Electrolyte Solutions: the Hydration Numbers of Ions	142
6	Relaxation of Electrolyte Solutions	147
7	Static Permittivity of Aqueous Solutions of Non-electrolytes	153
8	Calculation of Dipole Moments from Static Permittivities of Solutions	157
9	Relaxation of Aqueous Solutions of Non-electrolytes	159
10	Hydration Sheaths of Long Lifetime	161

Chapter 6 Dielectric Polarization Phenomena in Biomolecular Systems

By G. Schwarz

1	Introduction	163
2	Principles and the Classical Approach	164
	Fundamentals	164
	Induced and Orientational Polarization	167
	Rotational Relaxation	170
	Application to Polar Biopolymers	170
3	Induced Polarization in Macromolecular Systems	173
	The Phenomenological Approach to Orientation	173
	Maxwell-Wagner Dispersion	175
	Effects Due to Polarization of Counterion Distribution	177
4	Dielectric Phenomena Caused by Chemical Rate Processes	182
	Thermodynamic Foundation	182
	Simple Model Processes and General Aspects	184
	Dielectric Relaxation Due to Fast Conformational Transitions	188
	The Dielectric Effect of Proton Exchange with Zwitterions	189

Chapter 7 **General Molecular Theory and Electric Field
Effects in Isotropic Dielectrics**
By S. Kielich

1 Introduction	192
Books and Monographs	193
Review Articles	198
An Outline of Non-linear Effects in Dielectrics	203
Constitutive Relations in Linear Media	203
Non-linear Electric and Magnetic Effects	205
Electric saturation in an electric field	205
Electric saturation in a magnetic field	206
Magnetic saturation in a magnetic field	206
Magnetic saturation in an electric field	206
Non-linear Electro- and Magneto-optical Effects	206
Optical saturation in an electric field	206
Optical saturation in a magnetic field	207
Electric saturation in an optical field	208
Magnetic saturation in an optical field	209
Non-linear Optical Effects	209
Optical saturation in an optical field	210
Generation of harmonic optical frequencies	211
Non-linear light scattering	212
Harmonic light scattering	213
2 Electric and Magnetic Properties of Microsystems	213
Multipolar Properties of Molecules	213
Electric (Natural) Multipoles	213
Electric monopole (net charge)	214
Electric dipole	214
Electric quadrupole	215
Electric octupole	217
Electric hexadecapole	218
Electric 2^n -poles and molecular symmetry	218
Numerical Values of Molecular Electric Multipoles	219
Magnetic (Natural) Multipoles	231
Magnetic dipole	231
Magnetic 2^n -poles	232
Electrostatics of Permanent Multipoles	232
Electric Potential	232
Point charge potential	233
Dipole potential	233
Quadrupole potential	233
Octupole potential	233
Hexadecapole potential	234

Electric Field of Multipoles	234
Higher Order Electric Fields	236
Potential Energy of Multipoles in External Fields	236
Energy of Electrostatic Interaction between Two Multipole Systems	237
Ion–Ion Interaction	239
Ion–Dipole Interaction	239
Dipole–Dipole Interaction	239
Ion–Quadrupole Interaction	240
Dipole–Quadrupole Interaction	240
Quadrupole–Quadrupole Interaction	241
Dipole–Octupole Interaction	241
Ion–Octupole Interaction	241
Ion–Hexadecapole Interaction	241
Induced Molecular Multipoles	242
Linear Dipolar Electric Polarization	242
Linear Multipolar Electric Polarizabilities	244
Non-linear Dipole Polarizabilities	247
Voigt distortion	248
Born distortion	249
Determination of non-linear polarizabilities	255
Non-linear Multipolar Polarizabilities	255
Molecular Magnetic Susceptibilities	256
Energy of Induced Multipole Interaction	257
Induced Interaction between a Multipolar System and External Fields	257
Energy of the dipole type	257
Energies of multipole type	257
Induced Interaction between Two Multipole Systems	258
Dispersional Interaction between Molecules	259
3 Statistical and Electromagnetic Properties of Dielectrics	261
Statistical Perturbation Calculus	261
Statistical Mean Value	261
Statistical Distribution for Small Perturbations	262
Unweighted Averaging	263
Averaging of Trigonometric Functions	264
Averaging of Unit Vectors	264
Molecular Correlation Functions	265
Virial Coefficient Method	268
Statistical Molecular Distribution Functions in a Static and in an Alternating Electric Field	272
Statistical Fluctuations	274

Electromagnetic Field in Dielectrics	275
Maxwell's Equations	275
Semi-macroscopic Approach to Dielectrics	276
4 Electro-optical Properties of Dielectrics	278
Molar Refraction of Dense Media	278
Simple Liquids	281
Real Gases	282
Dense Mixtures	284
Kerr Effect in Gases and Liquids	285
Definition of Kerr Constants	286
Molecular Theory for a Molecular Dilute State	288
Kerr Effect in an Alternating Electric Field	290
Direct Molecular Angular Correlations	292
Non-linear Polarizability of Molecules	295
Spherical symmetry	296
Axial symmetry	296
General Theory of the Kerr Effect	297
Fundamental Formulae	297
Translational Fluctuations	300
Binary correlations	300
Ternary correlations	301
Fluctuations of the Molecular Fields	302
Quadrupolar molecules	302
Isotropic molecules	304
Other Contributions to the Kerr Constant	304
Comparison with Experiment	305
The Kerr Effect in Multicomponent Systems	305
On the Additivity of the Kerr Constant	306
Divergences from Additivity of the Kerr Constant due to Angular Correlations	308
The Role of Fluctuation Processes	310
Translational-orientational fluctuations	310
Translational fluctuations	310
Fluctuations of molecular field	311
Application to a Two-component System	311
Solution of a dipolar liquid in a quadrupolar solvent	312
Solution of a polar liquid in a solvent with isotropic molecules	313
The Kerr Effect in Polymer Solutions and Colloids	314
Electric Saturation of the Kerr Effect	314
Birefringence of Strongly Dipolar Microsystems	316
Birefringence of Non-dipolar Microsystems	317

Birefringence of Dipolar Anisotropically Polarizable Microsystems	319
Strong reorientation	319
Weak reorientation	320
5 Electric Permittivity Variations in a Strong Electric Field	321
Molar Electric Polarization of Dense Media	321
High Electric Field Effects	323
Determination of Variations in Electric Permittivity	323
Methods for the Measurement of Non-linear Electric Field Effects	325
Quadratic Permittivity Variations in Gases and Liquids	331
Gases and Dilute Dipolar Media	331
The Onsager Model in the Non-linear Electric Field Effect	333
The Models of Debye and Piekara	336
Angular Correlations between Molecules	338
Strong Correlations of Dipolar Molecules	339
Semi-macroscopic Theory of Dielectric Saturation	341
Dipolar Saturation	341
General Treatment of Fluctuational Processes	343
Atomic liquids	344
Quadrupolar molecules	344
The Role of Non-linear Polarizability	346
Atomic liquids	346
Polar liquids	346
Liquid Molecular Solutions	347
Investigation of Molecular Structure	350
Rotational isomerism	350
Internal rotation	351
Intermolecular Interaction Investigation	351
Complete Dielectric Saturation	354
Non-linear Electric Polarization	354
Strongly dipolar macromolecules	356
Non-dipolar macromolecules	358
Dipolar, anisotropically polarizable macromolecules	359
Discussion and Applications	360
Electrostriction and the Electrocaloric Effect	366
Electrostriction	366
Adiabatic Electrocaloric Effect	369
Dielectric Ellipsoid	370

6 Concluding Remarks and Recapitulation	374
Related Electric-field-induced Phenomena	374
Electric Field Dependence of Optical Rotation	374
Electrical Dichroism	375
Polarization of Fluorescence in an Electric Field	376
Electric-field-induced Spectra	376
Electric Field Effect on Light Scattering	377
Non-linear Polarizabilities of Atoms and Molecules	377
Radial and Angular Molecular Correlations	379
Radial Correlations	379
Angular Correlations	380
Weak angular correlations	381
Strong angular correlations	382
Fluctuations of Molecular Fields	383
Prospects in Electric Non-linearity Studies	385
The Kerr Effect	385
Dielectric Saturation	385
Author Index	388
