Chapter 1	Correlation Functions in Dipolar Absorption–Dispersion By C. Brot	1
1	Introduction	1
2	Macroscopic Applications of the Fluctuation–Dissipation Theorem	2
	Response of a Dielectric Sample and ‘External Field Susceptibility’	2
	Decreasing Step Function, <i>i.e.</i> Removal of a Constant Field	4
	Alternating Fields	4
	Relations with the Electric Permittivity	5
	Kramers–Krönig Relations and the Macroscopic Sum Rule	7
	Autocorrelation for a Sphere and Correlation with an Embedded Permanent Dipole	8
3	Proposed Relations between Macroscopic and Molecular Correlation Functions	11
	Correlation of the Dipole with a Sphere in which it is Immersed	12
	Hypothesis of Glarum and Cole	13
	Fatuzzo and Mason’s Approach	14
	Autocorrelation of the Dipole: Dynamical Extensions of the Onsager Model	14
	Cole’s Hypothesis	16
	Klug <i>et al.</i> and Rivail’s Result	16
	Molecular Intercorrelations	17
	Cole-type Hypothesis	20
	Fatuzzo-type Hypothesis	21
	Use of the Multimolecular Correlation Function $g(t)$	21
	Low-polarity Limit	22
4	Short-time Behaviour	22
	Macroscopic Recall	23
	Approximate Relation with Vibrational Lineshape	23
	The Multimolecular CF for Rotational Velocity and its Relation with the Absorption per Unit Length	24

Properties of the CF for Rotational Velocity: The	
Microscopic Sum Rule	25
Very Frequent Perturbation	28
Quantum Correction	28
5 Relations with Other Descriptive Formalisms	29
Distribution of Exponential Processes	29
The Memory Function Formalism	30
6 Models	31
Free Rotation	32
‘Extended Diffusion’ or Instant Collision Models	34
Rotational Diffusion by Small Steps	35
The Itinerant Oscillator Model	39
The Multi-site Models	41
Structure-limited Trapping	43
Environmental Fluctuations	43
Numerical Molecular Dynamics	46
7 Conclusions	47
Chapter 2 Light Scattering and Intensity Fluctuation	
Spectroscopy	48
<i>By P. N. Pusey and J. M. Vaughan</i>	
1 Introduction	48
2 Spectroscopy in the Time and Frequency Domains	50
Classical Spectroscopy	50
Time and Frequency Domains	51
Intensity Fluctuations in Time and Space	53
Correlation Functions of the Field	54
Light Detection	55
Construction of the Intensity Correlation Function	57
Correlation Functions	60
Conclusions	61
3 Scattering Theory, Statistics, Spatial and Temporal	
Coherence	62
Scattering Theory	62
Scattering from Macromolecules: An Example	64
Statistics of the Scattered Light Field	66
Coherence Area	67
Monochromaticity Conditions	69

4 Instrumental Considerations	70
Modes of Operation, Spectrum Analysis, and Correlation	70
Lasers, Scattering Spectrometers, and Detectors	72
Temperature Control	74
Angular Definition	74
Stray Light	74
Coherence Area	74
Statistical Considerations and Errors	76
Counting Rate	76
Sample Time	76
Detector Area	76
Clip Level	77
A Typical Correlation Experiment	77
Comparison with Classical Spectroscopy	79
5 Applications	80
Macromolecules	80
Macromolecules Small Compared with $1/K$	81
Monodisperse, Non-interacting Macromolecules	81
Polydisperse, Non-interacting Macromolecules	83
Monodisperse, Interacting Macromolecules	85
Monodisperse, Non-interacting Macromolecules Comparable or Large Compared with $1/K$	87
Conclusions	88
Motility	88
Non-Gaussian Effects	91
Microscopic Excitations	92
Simple Pure Fluids	92
Critical Phenomena	93
Mixtures	94
Chemical Reactions	94
Viscous Liquids	96
Other Applications	97
Electrophoresis	97
Liquid Crystals	98
Plastic Crystals and Solids	99
6 Appendix I: Relationship between Photocount and Intensity Correlation Functions	99
7 Appendix II: IFS using Thermal Light Sources	100
8 Appendix III: Dependence of Errors in PCS on Mean Count Rate	103

Chapter 3	Dielectric Relaxation Processes in Electrolyte Solutions	106
	<i>By J.-C. Lestrade, J.-P. Badiali, and H. Cachet</i>	
1	Introduction	106
2	Experimental Methods	108
	Measurements at Frequencies below 100 MHz	109
	Measurements at Frequencies above 100 MHz	110
3	Phenomenological Aspects of the Experimental Results	110
	Aqueous and Alcoholic Solutions	111
	Solutions in Other Solvents	115
	Best-fit Procedures	122
4	General Theory	124
5	Solvation	129
	Depression of the Static Permittivity and Solvation Numbers	130
	More-refined Models and Concentration Dependence of the Relaxation Time	133
6	Ionic Relaxation	134
	A New Derivation of the Debye-Falkenhagen Effect	135
	Dielectric Models: Theoretical Considerations	138
	Ion Pairs and Higher-order Aggregates	140
	A Dielectric Translational Diffusion Model	142
7	Conclusion	149
Chapter 4	Aspects of the Low-frequency Dielectric Relaxation of Supercooled Non-associated Liquids and other Viscous Liquids	151
	<i>By G. Williams</i>	
1	Introduction	151
2	Theory	155
	Frequency Dependence of Permittivity and its Correlation Function Representation	155
	Evaluation from Experimental Data	162
	Thermally Stimulated Depolarization Currents	163
3	Alkyl Halides and their Mixtures	164
4	Other Mixtures of Dipolar Liquids	169
5	Supercooled Decalin Solutions	172

<i>Contents</i>	ix
6 Supercooled <i>o</i>-Terphenyl Solutions	173
7 Related Relaxation Behaviour	180
8 Summary	182
Chapter 5 Dielectric Properties of Liquid Crystals <i>By G. Meier</i>	183
1 Introduction	183
2 Classification of Liquid Crystals	183
3 Structures and Properties of Liquid Crystals	185
Smectic Liquid Crystals	185
Nematic Liquid Crystals	185
Cholesteric Liquid Crystals	186
4 Static Dielectric Properties	187
5 Theory of Static Dielectric Polarization	191
6 Low-frequency Dielectric Relaxation in the Nematic Phase	193
7 Dielectric Properties of Nematic Liquid Crystals at Microwave Frequencies	195
Chapter 6 Non-linear Dielectric Effects <i>By G. Parry Jones</i>	198
1 Introduction	198
2 Classification of Non-linear Dielectric Effects	200
Introduction	200
Field-ordering Effects	200
Permanent Dipole	200
Induced Dipole	201
Field-induced Conformational Changes	201
Permanent Dipoles	201
Induced Dipoles	202
Electrostriction and Electrocaloric Effect	202
3 Experimental	204
Introduction	204
Steady-field Method	204
Pulsed Fields	204
Heating Problems	207
Adiabatic Heating Corrections	207

Experimental Techniques in the Presence of Heating	208
Frequency-sampling System	208
Frequency-modulation System	213
Apparatus	217
Apparatus for the Frequency-sampling Experiment	217
Frequency-modulation System	222
4 Studies of Macromolecules	223
Poly(γ -benzyl-L-glutamate)	223
Micellar Systems	231
5 Studies of Conducting Systems	232
Water	232
Water-Dioxan and Water-t-Butyl Alcohol Mixtures	235
Water-Dioxan	235
t-Butyl Alcohol-Water	240
Lower Alcohols	242
 Chapter 7 Dielectric Relaxation in Ferroelectrics of the Order-Disorder Type	 249
<i>By H. Kolodziej</i>	
1 Introduction	249
2 Experimental Results of Dielectric Relaxation	
Measurements	250
Dielectric Dispersion in Rochelle Salt	250
Dielectric Dispersion in TGS	252
Dielectric Dispersion in NaNO_2	253
Dielectric Dispersion in Alums	257
Dielectric Dispersion in $\text{Ca}_2\text{Sr}(\text{CO}_2\text{Et})_6$	260
3 The Polydispersive Character of Dielectric Relaxation in Order-Disorder Ferroelectrics	261
The Nakamura-Ishida Dispersion Relation	262
The Hill-Ichiki Dispersion Relation	263
4 Theory of the Relaxation Process in the Order-Disorder Type of Ferroelectrics	264
Semi-microscopic Model of Relaxation in Rochelle Salt	266
Dielectric Relaxation Mechanism in NaNO_2	268
The Critical Retardation Feature of Dielectric Relaxation	270
Yoshimitsu-Matsubara Treatment of Dielectric Relaxation	270

<i>Contents</i>	xi
5 Experimental Methods	276
Low-frequency Methods	276
High-frequency Methods	277
Capacitance Methods	277
Measuring Procedure	283
Reactance Method	284
Cavity Perturbation Method	285
Westphal's Method	286
Author Index	288
