Chapter 1 Chemical Kinetics—Retrospect and Prospects	1
<i>By S. W. Benson</i>	
1 Introduction	1
2 Gas-phase Kinetics – Neutral Species	3
3 Gas-phase Kinetics – Charged Species	8
4 Symmetry Conservation	9
5 Condensed Phases	11
6 The Crystal Ball	12
Chapter 2 Reactions of Atoms in Ground and Electronically Excited States	14
<i>By R. J. Donovan and H. M. Gillespie</i>	
1 Introduction	14
2 Experimental Techniques	16
Time-resolved Atomic Absorption Spectrophotometry	16
Time-resolved Atomic Resonance Fluorescence	18
Chemical Lasers	19
Time-resolved Spontaneous Emission	21
Molecular Beams	22
Flow Systems	22
Other Techniques	23
3 Hydrogen Atoms	24
Ground State $H(1^2S_{\frac{1}{2}})$	24
Electronically Excited $H(2^3P_j)$ and $H(2^2S_{\frac{1}{2}})$	31
4 Alkali Atoms	32
Ground state ($n^2S_{\frac{1}{2}}$) Atoms	32
Electronically Excited (n^2P_j) Atoms	34
5 Alkaline Earth Atoms	35

6 Carbon Atoms	39
7 Nitrogen, Phosphorus, and Arsenic Atoms	42
8 Oxygen Atoms	49
Ground State O(2^3P_j)	49
Electronically Excited O(2^1D_2)	56
Electronically Excited O(2^1S_0)	59
9 Sulphur, Selenium, and Tellurium Atoms	60
Ground State (n^3P_2) Atoms	60
Spin-orbit Excited States ($n^3P_{1,0}$)	64
First Excited Singlet State (n^1D_2)	66
Second Excited Singlet State (n^1S_0)	69
10 Halogen Atoms	70
Fluorine	70
Chlorine	76
Bromine	77
Iodine	79
Halogen Atom Recombination	80
11 Noble Gas Atoms	82
12 Heavy Metal Atoms	85
Mercury	85
Tin	90
Lead	92
Chapter 3 Unimolecular Reactions	93
<i>By P. J. Robinson</i>	
1 Introduction	93
2 General Theoretical Aspects	93
3 Intramolecular Energy Randomization	96
Thermal Energization	97
Chemical Activation Studies	97
Hot-atom Substitution Products	103
Photoactivation	104
Crossed-beam Studies	104
Unimolecular Reactions of Ions	110
Laser Studies	112
Trajectory Calculations	112
Conclusions	113

<i>Contents</i>	vii
4 Intermolecular (Collisional) Energy Transfer	115
5 Other Chemical Activation Studies	120
Input Data for Calculation All Available	121
Studies to Determine the Critical Energy E_0	122
Studies to Determine A_∞	124
6 Thermal Unimolecular Reactions in the Fall-off Region	126
7 Thermal Unimolecular Reactions in the High-pressure Region	128
Cyclopropane and its Derivatives	132
Cyclobutane Derivatives	135
Cyclobutene Derivatives	138
Polycyclic Systems	139
Olefins	146
Heterocyclic Compounds	146
Dehydrohalogenations and other Four-centre Eliminations	150
Six-centre Eliminations	151
Isocyanides	155
Bond-fission Reactions	155
Carbene-forming Reactions	159
Reactions of Free Radicals	159
Appendix	160
Chapter 4 A Critical Survey of Rate Constants for Reactions in Gas-phase Hydrocarbon Oxidation	161
<i>By R. W. Walker</i>	
1 Introduction	161
2 Outline of Experimental Methods	164
I Direct Studies of Hydrocarbon Oxidation, Inside or Outside Cool-flame Limits	164
II Addition of Traces of Hydrocarbons to Slowly Reacting Mixtures of Hydrogen and Oxygen in Aged Boric-acid-coated Vessels at 733—773 K	165
III Direct Oxidation of Aldehydes	165
IV Kinetic Spectroscopy	166
V Chemical Shock Tubes	166
VI Photochemical Oxidation	167
VII Hydrocarbon Flames	167
VIII Very Low Pressure Pyrolysis (VLPP)	167
IX Free-radical Buffer System	168

3 Thermochemical Aspects of Hydrocarbon Oxidation	169
4 The Initiation Process	172
5 Radical–Radical Reactions	177
Recombination of Alkyl Radicals	177
Radical–Radical Reactions not involving Recombination	181
6 Radical Decompositions and Isomerizations	184
Radical Decompositions	184
Isomerization Reactions of Alkyl Radicals	186
7 Radical Attack on Alkanes and Related Compounds	187
8 Oxidation Reactions of Alkyl Radicals	196
General Discussion	196
Oxidation Reactions of the Methyl Radical	197
Oxidation Reactions of Higher Alkyl Radicals	201
Overall Rate Constants	201
Formation of Conjugate Olefins	202
Reactions of RO_2 and $\dot{\text{Q}}\text{OOH}$ Radicals	204
Chapter 5 Kinetic Studies in Silicon Chemistry	212
<i>By I. M. T. Davidson</i>	
1 Introduction	212
2 Short-lived Molecules with $p_\pi-p_\pi$ Bonds to Silicon	212
3 Reactions of Silyl and Alkyl Radicals	214
Reactions of Alkyl Radicals with Silicon Compounds	214
Reactions of Silyl Radicals	218
4 Silylenes and Carbenes	221
Inorganic Silylenes: Non-kinetic Work	221
Inorganic Silylenes: Kinetic Work	221
Organic Silylenes	225
Carbenes	225
Reactions of Carbon and Silicon Vapour with Silanes	226
Insertion of Methylene into Silanes: Chemical Activation	227
5 Pyrolysis of Silicon Compounds	228
6 Thermochemistry	234

<i>Contents</i>	ix
7 High-energy Chemistry	235
Ion-Molecule Reactions	236
8 Rearrangements	237
9 Molecular Elimination Reactions	239
Elimination Reactions of 'Hot' Molecules	241
10 Conclusions	241
Chapter 6 Network Effects in the Dissociation and Recombination of a Diatomic Gas	243
<i>By H. O. Pritchard</i>	
1 Preface	243
2 Introduction	243
3 A Variety of Theoretical Approaches	247
Equilibrium Theories	247
Non-equilibrium Theories	253
4 The Philosophy of the Present Approach	255
5 The Diatomic Dissociation-Recombination Problem	256
6 Transition Probabilities	260
Bound-Bound Transitions	260
Bound-Unbound Transitions	264
7 Solving the Master Equation	266
8 How Disequilibrium Affects the Arrhenius Temperature Coefficient	272
9 The Emergence of Network Effects	275
10 Conclusions	281
The Nature of the Dissociation Process	282
Stumbling Blocks to Progress	286
Network Effects in Chemical Physics	289

Chapter 7 Recent Advances in the Analysis of Kinetic Data	291
<i>By A. Jones</i>	
1 Introduction	291
The Model-building Process	291
Computing Predictions from Rate Equations	293
Fitting Models to Data	294
Sensitivity Analysis	295
Confidence Limits	295
Model Discrimination	296
2 Computing Predictions for Models Represented by Ordinary	
Differential Equations	296
Integration Methods	296
Integration Step Size for Fast Processes	298
Implicit Integration Methods	299
The Phenomenon of Stiffness	300
A Multi-step Implicit Integration Method	301
3 Least-squares Fitting of Non-linear Models	303
The Taylor Series Method	305
The Steepest Descent Method	306
Marquardt's Algorithm	306
Generalized Inverses	307
 Chapter 8 Kinetics of Oscillating Reactions	 309
<i>By B. F. Gray</i>	
1 Introduction	309
2 Experimental Facts	310
The Decomposition of Hydrogen Peroxide	310
The Belousov–Zhabotinskii Reaction	312
The Sodium Dithionite Decomposition	318
The Oxidation of Carbon Monoxide	318
The Non-isothermal Oxidation of Organic Compounds	321
Biochemical Systems, Closed and Open	330
Oscillations in Open Reactions	332
3 Theory of Oscillating Reactions	333
The Basic Equations	333
Conservation of Mass	335
Detailed Balancing	336
Chemical Feasibility	338

Mathematical Techniques	339
Two-variable Systems	339
The First Method of Liapounov	341
Limit Cycles	342
Behaviour in the Large	343
Parasitic Oscillations	344
Piecewise Linear Systems	345
<i>N</i> -Variable Systems	345
Hurwitz and Similar Criteria	348
The Second Method of Liapounov	349
Closed Systems: General Results	349
Stability of Equilibrium	349
Damped Oscillations and Quasistationary States	353
Open Systems: General Results	358
4 Specific Examples of Oscillating Reactions	359
The Belousov–Zhabotinskii Reaction	359
The Catalytic Decomposition of Hydrogen Peroxide	363
The Decomposition of Sodium Dithionite	365
The Lotka Mechanism	366
The Carbon Monoxide Oscillator	368
End-product Inhibition	369
Glycolytic Oscillations	370
The Thermokinetic Oscillator of Salnikov	372
Thermokinetic Oscillations in a CSTR	373
Thermokinetic Models of Organic Oxidation Oscillations	374
‘The Brusselator’	380
Miscellaneous Oscillators	383
5 Conclusions	384
Author Index	387
