CHAPTER 1	Organic Radicals in Solution	1
	<i>By B.J. Tabner</i>	
1	Introduction	1
2	Carbon-centred Radicals	3
2.1	Nonconjugated Carbon-centred Radicals	3
2.1.1	Alkyl Radicals	3
2.1.2	Cyclic Alkyl Radicals	6
2.1.3	σ -Electronic Carbon Radicals	9
2.2	Radicals with Conjugated π -Systems	10
3	Nitrogen-centred Radicals	13
4	Oxygen-centred Radicals	15
5	Nitroxyl Radicals	17
6	Sulphur-centred Radicals	22
7	Radical Cations	23
7.1	Radical Cations Formed by Ionising Radiation	23
7.2	Radical Cations Formed by Chemical or Electrochemical Methods	30
8	Radical Anions	37
9	CIDEP	46
	References	50
CHAPTER 2	Triplets and Biradicals	60
	<i>By A. Hudson</i>	
1	Introduction	60
2	Ground and Thermally Excited Triplets, and States of Higher Multiplicity	60
3	Photoexcited Triplet States	66
	References	71

CHAPTER 3	Spin Labels: Biological Systems	74
	<i>By Ching-San Lai</i>	
1	Introduction	74
2	Proteins	74
2.1	Membranes	74
2.2	Blood	77
2.3	Enzymes	79
2.4	Muscle	79
2.5	Others	80
3	Nucleic Acids	80
4	Properties of Model and Biological Membranes	80
4.1	Lateral Diffusion	80
4.2	Lipid Translocation	81
4.3	Interdigitation	83
4.4	Others	83
5	Lipid-Protein Interaction	84
5.1	Specific Interaction	85
5.2	Boundary Lipid	87
6	Cellular Membrane Dynamics	88
6.1	Proliferating Cells	88
6.2	Nonproliferating Cells	88
6.3	Cellular Dynamics	89
7	Modification of Membrane Functions	90
7.1	Anesthetics	90
7.2	Others	90
8	Methods	93
9	Nitroxide Reduction	94
10	Synthesis	95
	References	97
CHAPTER 4	Applications of E.S.R. in Polymer Chemistry	104
	<i>By D.J.T. Hill, J.H. O'Donnell, and P.J. Pomery</i>	
1	Introduction	104
2	Polymer Degradation	104
2.1	Ionizing Radiation	104
2.1.1	Polyolefins	105
2.1.2	Fluorinated Polymers	106
2.1.3	Vinyl Polymers	106
2.1.4	Cellulose	107
2.1.5	Other Polymers	107
2.1.6	Electron Beam Resists	107

2.2	Photodegradation	108
2.2.1	Polyolefins	108
2.2.2	Vinyl Polymers	108
2.2.3	Polyamides and Polyimides	109
2.2.4	Surface Coatings	109
2.2.5	Other Polymers	110
2.2.6	Mechanisms	110
2.3	Mechano-chemical Degradation	110
2.3.1	Polyolefins and Vinyl Polymers	110
2.3.2	Other Polymers	111
2.4	Thermal Degradation	111
2.4.1	Polyolefins and Vinyl Polymers	111
2.4.2	Aromatic and Network Polymers	111
2.4.3	Cellulose	112
2.5	Biological Degradation	112
3	Polymerization	112
3.1	Initiation of Polymerization	112
3.2	Homogeneous Chain Growth	113
3.2.1	Solid State Polymerization	113
3.2.2	Liquid State Polymerization	114
3.2.3	Resins and Composites	116
3.3	Heterogeneous Chain Growth	117
3.3.1	Emulsion Polymerization	117
3.3.2	Grafting and Crosslinking	117
3.3.3	Plasma Polymerization	118
3.4	Polymerization Catalysts	119
4	Polymer Structure	120
4.1	Spin Probes and Spin Labels	120
4.1.1	Networks	120
4.1.2	Interfaces	121
4.1.3	Membranes and Colloids	122
4.1.4	Solutions and Polyelectrolytes	122
4.1.5	Blends	122
4.1.6	Polymers in the Solid State	123
4.1.7	Other Aspects	124
5	Conducting Polymers	124
	References	126
CHAPTER 5	Free Radical Studies in Biology and Medicine	136
	<i>By N.J.F. Dodd</i>	
1	Introduction	136
2	Tissues	136
2.1	Soft Tissues	136
2.2	Melanin	141
2.3	Hard Tissues	141
3	Radiation Effects in Biological Molecules	143
3.1	Ionising Radiation	143
3.1.1	DNA and Related Bases	143
3.1.2	Proteins and Amino Acids	145
3.1.3	Other Biochemicals	145

3.2	Ultrasound	146
3.3	Photolysis	147
4	Radical Reactions of Drugs and Toxic Chemicals	150
4.1	Antitumour Agents	150
4.2	Other Therapeutic Drugs	154
4.3	Vitamins and Other Natural Products	156
4.4	Carcinogens	158
4.5	Other Toxic Chemicals and Pollutants	159
5	Enzymes	162
6	Oxygen Radicals	164
7	Other Systems	167
	References	168
