

Acknowledgements

We wish to express our sincere appreciation to the academic and industrial colleagues who have provided their expertise in reviewing some of the chapters of this book. They are the leading researchers in many of the areas discussed and this work owes much of its relevance to their admirable scientific effort. We particularly acknowledge the assistance of Dr Hiroshi Kimura (in Japan), Professors Gadi Rothenberg (University of Amsterdam), Shelley D Minter (Saint Louis University), Elio Santacesaria (University of Naples) and John Whittall (University of Manchester), and also Drs Katarina Klepacova (Procede Group), Paolo Forni (Grace Construction Products), Jean-Luc Dubois (Arkema) and Roger Lawrence (Davy Process Technology).

None of our research would have been possible without the crucial involvement of our collaborators, particularly Rosaria Ciriminna, Cristina della Pina and Giovanni Palmisano. We thank them for their creative ideas which have led to the development of alternative uses for glycerol and new selective conversion processes, entirely unknown prior to our joining forces. Annie Jacob and Merlin Fox of RSC Publishing were instrumental in producing this book. Finally, we warmly thank Don Sanders for his help in editing the text.

Mario Pagliaro, Michele Rossi
