## Chapter 1 A General Overview of Atomic Spectrometric Techniques

*Alfredo Sanz-Medel, Rosario Pereiro and José Manuel Costa-Fernández*

1.1	Introduction: Basis of Analytical Atomic Spectrometric Techniques	1
1.2	Atomic Optical Spectrometry	3
1.2.1	Classification of Techniques: Absorption, Emission and Fluorescence	4
1.2.2	A Comparative View of Basic Instrumentation	9
1.2.3	Analytical Performance Characteristics and Interferences in the Different Techniques	16
1.3	Atomic Mass Spectrometry	20
1.3.1	Fundamentals and Basic Instrumentation of Inductively Coupled Plasma Mass Spectrometry	21
1.3.2	Analytical Performance Characteristics and Interferences in ICP-MS	24
1.3.3	Isotope Ratio Measurements and Their Applications	29
1.4	Flow Systems with Atomic Spectrometric Detection	32
1.4.1	Flow Injection Analysis and Atomic Spectrometry	33
1.4.2	Chromatographic Separations Coupled On-line to Atomic Spectrometry	36
1.4.3	Detection of Fast Transient Signals	39
1.5	Direct Analysis of Solids by Spectrometric Techniques	43
1.5.1	Elemental Analysis by Optical Spectrometry	44
1.5.2	Elemental Analysis by Mass Spectrometry	46
	References	47

## Chapter 2 Implementing A Robust Methodology: Experimental Design and Optimization

*Xavier Tomás Morer, Lucinio González-Sabaté,  
Laura Fernández-Ruano and María Paz Gómez-Carracedo*

2.1	Basics of Experimental Design	51
2.1.1	Objectives and Strategies	51
2.1.2	Variables and Responses: Factors, Levels, Effects and Interactions	52
2.2	Analysis of Experimental Designs	53
2.2.1	Factorial Designs	53
2.2.2	$2^f$ Factorial Designs	54
2.2.3	Algorithms: $BH^2$ and Yates	56
2.2.4	Graphical and Statistical Analysis	58
2.2.5	Blocking Experiments	62
2.2.6	Confounding: Fractional Factorial Designs	63
2.2.7	Saturated Designs: Plackett–Burman Designs. Use in Screening and Robustness Studies	64
2.3	Taguchi’s Approach to Experimental Design	66
2.3.1	Strategies for Robust Designs	66
2.3.2	Planning Experiments: Orthogonal Arrays	68
2.3.3	Robust Parameter Design: Reducing Variation	74
2.3.4	Worked Example	77
2.4	Optimisation	83
2.4.1	Experimental Optimisation	83
2.4.2	The Simplex Method	84
2.4.3	The Modified Simplex Method	89
2.5	Examples of Practical Applications	141
	References	141

## Chapter 3 Ordinary Multiple Linear Regression and Principal Components Regression

*Joan Ferré-Baldrich and Ricard Boqué-Martí*

3.1	Introduction	160
3.1.1	Multivariate Calibration in Quantitative Analysis	160
3.1.2	Notation	163
3.2	Basics of Multivariate Regression	164
3.2.1	The Multiple Linear Regression Model	164
3.2.2	Estimation of the Model Coefficients	165
3.2.3	Prediction	166
3.2.4	The Collinearity Problem in Multivariate Regression	166
3.3	Multivariate Direct Models	167
3.3.1	Classical Least Squares	167

3.4	Multivariate Inverse Models	171
3.4.1	Inverse Least Squares (ILS)	172
3.4.2	Principal Components Regression (PCR)	174
3.5	Examples of Practical Applications	178
3.6	Appendix	178
	References	179

## Chapter 4 Partial Least-Squares Regression

*Jose Manuel Andrade-Garda, Ricard Boqué-Martí, Joan Ferré-Baldrich and Alatzne Carlosena-Zubieta*

4.1	A Graphical Approach to the Basic Partial Least-squares Algorithm	181
4.2	Sample Sets	192
4.3	Data Pretreatment	194
4.3.1	Baseline Correction	195
4.3.2	Smoothing	195
4.3.3	Mean Centring and Autoscaling	197
4.3.4	Derivatives	200
4.4	Dimensionality of the Model	200
4.4.1	Cross-validation	205
4.4.2	Other Approaches to Select the Dimensionality of the PLS Model	208
4.5	Diagnostics	210
4.5.1	$t$ vs $t$ Plots	210
4.5.2	$t$ vs $u$ Plots	211
4.5.3	The $T^2$ , $h$ and $Q$ statistics	213
4.5.4	Studentised Concentration Residuals	216
4.5.5	'Predicted vs Reference' Plot	218
4.5.6	Validation	221
4.5.7	Chemical Interpretation of the Model	222
4.6	Multivariate Figures of Merit	225
4.6.1	Accuracy (Trueness and Precision)	225
4.6.2	Sample-specific Standard Error of Prediction	227
4.6.3	Sensitivity	228
4.6.4	Selectivity	229
4.6.5	Limit of Detection	229
4.6.6	Limit of Quantification	231
4.7	Examples of Practical Applications	232
4.7.1	Flame and Electrothermal Atomic Spectrometry	232
4.7.2	Inductively Coupled Plasma	234
4.7.3	Laser-induced Breakdown Spectrometry	235
4.7.4	Miscellanea	235
	References	236

**Chapter 5 Multivariate Regression using Artificial Neural Networks**

*Jose Manuel Andrade-Garda, Alatzne Carlosena-Zubieta,  
María Paz Gómez-Carracedo and Marcos Gestal-Pose*

5.1	Introduction	244
5.2	Neurons and Artificial Networks	247
5.3	Basic Elements of the Neuron	250
5.3.1	Input Function	250
5.3.2	Activation and Transfer Functions	252
5.3.3	Output Function	252
5.3.4	Raw Data Preprocessing	254
5.4	Training an Artificial Neural Network	254
5.4.1	Learning Mechanisms	256
5.4.2	Evolution of the Weights	258
5.5	Error Back-propagation Artificial Neural Networks	259
5.6	When to Stop Learning	260
5.7	Validating the Artificial Neural Network	262
5.8	Limitations of the Neural Networks	263
5.9	Relationships with Other Regression Methods	264
5.10	Worked Example	266
5.11	Examples of Practical Applications	270
5.11.1	Flame Atomic Absorption and Atomic Emission Spectrometry (FAAS and FAES)	270
5.11.2	Electrothermal Atomic Absorption Spectrometry (ETAAS)	271
5.11.3	Inductively Coupled Plasma (ICP-OES and ICP-AES)	272
5.11.4	Inductively Coupled Plasma Mass Spectrometry (ICP-MS)	273
5.11.5	X-ray Fluorescence (XRF)	274
5.11.6	Secondary Ion Mass Spectrometry (SIMS)	275
	References	276
