Chapter 1	Food Structure for Nutrition	1
	<i>D.G. Lemay, C.J. Dillard and J.B. German</i>	
1.1	Introduction	1
1.2	Food Structure and Nutrition – Then and Now	2
1.2.1	The Past	2
1.2.2	The Present	3
1.3	Food Structure and Bioavailability	4
1.4	Models of Food Components, Food Structure, and Health	5
1.5	Milk as a Model of Food Structure and Nutrition	6
1.6	Bioactive Molecules in Milk	8
1.6.1	Milk and Glucose Bioavailability	9
1.6.2	Milk and Protein Bioavailability	9
1.6.3	Milk and Lipid Bioavailability	10
1.7	Food Structure and Nutrition – The Future	11
1.8	Conclusions	13
	References	13
PART I	Self-Assembly and Encapsulation	17
Chapter 2	Self-Assembly in Food – A New Way to Make Nutritious Products	19
	<i>M. Michel, H.J. Watzke, L. Sagalowicz, E. Kolodziejczyk and M.E. Leser</i>	
2.1	Introduction	19
2.2	Lipid Digestion – A Self-Assembly-Based Bioprocess	21
2.3	Lipases: Transformation of Lipids into Amphiphiles	22
2.4	Liquid Crystalline Phase Formation during Digestion	23
2.5	Oil Droplet Digestion	25
2.6	Emulsifier-Based Self-Assembly and Structuring of Oil Droplets	26
2.7	Addition of Guest Molecules to Mesophases	27

2.8	Phytosterol Solubilization into Mesophases	29
2.9	Colloid Science and Nutrition	29
	References	30
Chapter 3	Structure of Self-Assembled Globular Proteins	35
	<i>T. Nicolai</i>	
3.1	Introduction	35
3.2	Structure of Dilute Aggregates	38
3.3	Structure of Interacting Aggregates and Gels	43
3.4	Relationship between Structure and Linear Elasticity	51
3.5	Conclusions	53
	Acknowledgement	54
	References	54
Chapter 4	Similarities in Self-Assembly of Proteins and Surfactants: An Attempt to Bridge the Gap	57
	<i>E. van der Linden and P. Venema</i>	
4.1	Introduction	57
4.2	Surfactant Assembly	58
4.3	Spherical Protein Aggregates	61
4.4	Protein Assemblies of Arbitrary Morphology: A First Attempt	62
4.5	β -Lactoglobulin Fibrils: Equilibrium Assembly or Not?	64
	References	66
Chapter 5	Self-Assembled Liquid Particles: How to Modulate their Internal Structure	69
	<i>S. Guillot, A. Yaghmur, L. de Campo, S. Salentinig, L. Sagalowicz, M.E. Leser, M. Michel, H.J. Watzke and O. Glatter</i>	
5.1	Introduction	69
5.2	Emulsified Liquid Crystals and Microemulsions	71
5.3	Solubilization of Oils in Self-Assembled Structured Particles	75
	5.3.1 Emulsification of Microemulsions	75
	5.3.2 Micellar Cubosomes and Transformation from Hexosomes to EME	79
	5.3.3 Control of the Internal Self-Assembled Structure	82
5.4	Conclusions and Outlook	83
	References	84

Chapter 6	Synergistic Solubilization of Mixed Nutraceuticals in Modified Discontinuous Micellar Cubic Structures	87
	<i>R. Efrat, A. Aserin and N. Garti</i>	
6.1	Introduction	87
6.2	Experimental	89
6.3	Results and Discussion	91
6.3.1	Thermal Behaviour of the Q _L Phase	91
6.3.2	Systems Loaded with Phytosterols	94
6.3.3	Lycopene Solubilization	97
6.3.4	Lycopene and Phytosterol Solubilization	97
6.4	Conclusions	100
	References	101
Chapter 7	Scope and Limitations of Using Wax to Encapsulate Water-Soluble Compounds	103
	<i>M. Mellema</i>	
7.1	Introduction	103
7.2	Theory	106
7.3	Materials and Methods	106
7.3.1	Preparation of Wax Capsules	106
7.3.2	Analysis of Wax Capsules	107
7.3.3	Preparation and Analysis of Complex Coacervate Capsules	108
7.3.4	Analysis of Wax Digestibility	109
7.4	Results	110
7.4.1	Wax Capsules Prepared by Technique 1	110
7.4.2	Wax Capsules Prepared by Technique 2	110
7.4.3	Complex Coacervate Capsules	112
7.4.4	Digestibility of Wax	113
7.5	Concluding Remarks	114
	Acknowledgements	114
	References	115
Chapter 8	Self-Assembly of Starch Spherulites as Induced by Inclusion Complexation with Small Ligands	117
	<i>B. Conde-Petit, S. Handschin, C. Heinemann and F. Escher</i>	
8.1	Introduction	117
8.2	Materials and Methods	118
8.3	Results and Discussion	119
8.4	Concluding Remarks	125
	References	125

PART II	Biopolymer Interactions	127
Chapter 9	Electrostatics in Macromolecular Solutions	129
	<i>B. Jönsson, M. Lund and F.L.B. da Silva</i>	
9.1	Introduction – The Dielectric Continuum Model	129
9.2	The Simple Electrolyte Solution	130
9.3	A Charged Macromolecule in a Salt Solution	131
9.4	Interaction of Two Charged Macromolecules	136
9.4.1	Interaction of Two Peptides	136
9.4.2	Effect of Multivalent Ions	139
9.4.3	Effect of Titrating Groups	140
9.4.4	Bridging Attraction with Polyelectrolytes	145
9.5	Protein–Polyelectrolyte Complexation	148
9.6	Conclusions	153
	References	153
Chapter 10	Casein Interactions: Does the Chemistry Really Matter?	155
	<i>D.S. Horne, J.A. Lucey and J.-W. Choi</i>	
10.1	Introduction	155
10.2	Caseins as Polymers	156
10.3	Introduction of Calcium Sequestrants	157
10.4	Casein Chemistry and its Role in Casein Micelle Structure	161
10.5	Concluding Remark	165
	References	166
Chapter 11	Electrostatic Interactions between Lactoferrin and β-Lactoglobulin in Oil-in-Water Emulsions	167
	<i>A. Ye and H. Singh</i>	
11.1	Introduction	167
11.2	Experimental	168
11.2.1	Preparation of Emulsions	168
11.2.2	Characterization of Emulsions	168
11.3	Results and Discussion	169
11.3.1	Emulsions formed with Mixture of Lactoferrin + β -Lactoglobulin	169
11.3.2	Addition of β -Lactoglobulin to Lactoferrin-Stabilized Emulsions	171
11.3.3	Addition of Lactoferrin to β -Lactoglobulin-Stabilized Emulsions	173
	Acknowledgements	175
	References	175

Chapter 12	β-Lactoglobulin Aggregates from Heating with Charged Cosolutes: Formation, Characterization and Foaming	177
	<i>G. Unterhaslberger, C. Schmitt, S. Shojaei-Rami and C. Sanchez</i>	
12.1	Introduction	177
12.2	Materials and Methods	178
12.2.1	Materials	178
12.2.2	Sample Preparation	178
12.2.3	Determination of Denaturation Kinetics by RP-HPLC	179
12.2.4	Determination of Stability Ratio	180
12.2.5	Determination of Protein Aggregate Molecular Weight and Second Virial Coefficient	180
12.2.6	Determination of Protein Aggregate Size and Electrophoretic Mobility	181
12.2.7	Determination of Protein Aggregate Interfacial Properties	182
12.2.8	Determination of Protein Aggregate Foaming and Foam-Stabilizing Properties	182
12.3	Results and Discussion	183
12.3.1	Protein Denaturation and Aggregation in Presence of Cosolutes	183
12.3.2	Physicochemical Properties of Protein Aggregates in Relation to Interfacial and Foaming Properties	188
12.4	Conclusions	192
	References	192
Chapter 13	Manipulation of Adsorption Behaviour at Liquid Interfaces by Changing Protein–Polysaccharide Electrostatic Interactions	195
	<i>R.A. Ganzevles, T. van Vliet, M.A. Cohen Stuart and H.H.J. de Jongh</i>	
13.1	Introduction	195
13.2	Experimental	198
13.3	Adsorption Kinetics	199
13.4	Surface Rheology and Structure of Adsorbed Layers	203
13.5	Concluding Remarks	206
	Acknowledgements	206
	References	206

Chapter 14	Adsorption Experiments from Mixed Protein + Surfactant Solutions	209
	<i>V.S. Alahverdjieva, D.O. Grigoriev, J.K. Ferri, V.B. Fainerman, E.V. Aksenenko, M.E. Leser, M. Michel and R. Miller</i>	
14.1	Introduction	209
14.2	Theoretical Approach	210
	14.2.1 Thermodynamic Model	210
	14.2.2 Adsorption Kinetics	212
14.3	Materials and Methods	213
14.4	Results and Discussion	214
14.5	Conclusions	223
	Acknowledgement	223
	References	223
Chapter 15	Role of Electrostatic Interactions on Molecular Self-Assembly of Protein + Phospholipid Films at the Air–Water Interface	227
	<i>A. Lucero Caro, A.R. Mackie, A.P. Gunning, P.J. Wilde, V.J. Morris, M.R. Rodríguez Niño and J.M. Rodríguez Patino</i>	
15.1	Introduction	227
15.2	Experimental	228
15.3	Results and Discussion	229
	15.3.1 Effect of pH on Electrostatic Interactions	229
	15.3.2 DPPC Monolayers	231
	15.3.3 β -Casein Monolayers	234
	15.3.4 DPPC + β -Casein Monolayers	238
15.4	Conclusions	241
	Acknowledgements	241
	References	242
Chapter 16	Theoretical Study of Phase Transition Behaviour in Mixed Biopolymer + Surfactant Interfacial Layers Using the Self-Consistent-Field Approach	245
	<i>R. Ettelaie, E. Dickinson, L. Cao and L.A. Pugnali</i>	
16.1	Introduction	245
16.2	Methodology and Model	247
	16.2.1 Self-Consistent-Field Calculations	247
	16.2.2 The Mixture Model	248
16.3	Results and Discussion	249

<i>Contents</i>		xiii
	16.3.1 Adsorption Isotherms	249
	16.3.2 Density Profiles	253
	16.4 Conclusions	254
