## 1. General Introduction

### Chapter 1 General Introduction: The Need to Protect Groundwater

*Philippe Quevauviller*

1.1	Introduction	3
1.2	The Scientific Background	4
1.2.1	The Hydrogeological Cycle	4
1.2.2	Waters in Aquifers	5
1.2.3	Groundwater Flows	6
1.2.4	Groundwater Quality	6
1.3	Groundwater Deterioration Risks	7
1.3.1	Quantitative Aspects	7
1.3.2	Links to Associated Ecosystems	9
1.3.3	Groundwater Pollution	10
1.4	Groundwater Risk Assessment: Implications for Policy	13
1.4.1	Groundwater Protection Needs	13
1.4.2	Assessment, Prevention and Control	14
1.4.3	Monitoring	16
1.5	Conclusions	18
	References	18

## 2. Science–Policy Integration Needs

### Chapter 2.1 Science–Policy Integration for Common Approaches Linked to Groundwater Management in Europe

*Philippe Quevauviller*

2.1.1	Introductory Remarks on Science–Policy Integration Needs	21
-------	--	----

2.1.2	Science Integration in the Light of Groundwater Management	24
2.1.3	Examples of Projects in Support of Groundwater Policy	25
2.1.3.1	Risk Assessment	25
2.1.3.2	Groundwater Remediation	26
2.1.3.3	Diffuse Pollution	26
2.1.3.4	Management Issues and Information Tools	26
2.1.3.5	Relevant Networks	27
2.1.4	A Project “Tailor-Made” to Support the New EU Groundwater Directive: BRIDGE	27
2.1.5	Conclusions: Some Research Needs	28
	References	29

## **Chapter 2.2 Transferring Scientific Knowledge to Societal Use: Clue from the AQUATERRA Integrated Project**

*Philippe Négrel, Dominique Darmendrail and Adriaan Slob*

2.2.1	Introduction	31
2.2.2	Overview of The AQUATERRA Project	33
2.2.3	Environmental Policies	35
2.2.3.1	Four Generations of Environmental Policies	35
2.2.3.2	Science in the Four Generations of Environmental Policies	36
2.2.4	AQUATERRA Case Studies	38
2.2.4.1	The Ebro Case Study	38
2.2.4.2	The Meuse Case Study	43
2.2.5	Discussions of the Contributions of AQUATERRA to Societal Use Related to Groundwater Resources Management	51
2.2.5.1	Stakeholder Involvement	54
2.2.5.2	Learning Approaches in Policy-Making	55
2.2.6	Conclusions	56
	References	56

## **Chapter 2.3 Groundwater Management and Planning: How Can Economics Help?**

*Jean-Daniel Rinaudo and Pierre Strosser*

2.3.1	Introduction	58
2.3.2	Economic Methodologies and Tools: Four Possible Ways of Supporting Groundwater Management and Planning	60
2.3.2.1	Economic Characterisation of Water Uses	60

2.3.2.2	Methods to Assess Environmental Costs	61
2.3.2.3	Economic Methods for Appraisal of Groundwater Projects and Policies: Cost-effectiveness and Cost–Benefit Analysis	62
2.3.2.4	Economic Behavioural Models	63
2.3.2.5	Selected Illustrations	64
2.3.3	Assessing and Simulating Current and Future Socio-Economic Impact of Groundwater Deterioration	64
2.3.4	Cost Effectiveness Analysis of Groundwater Protection Measures: Finding the Least Costly Way to Reduce Nitrate Pollution to Groundwater	66
2.3.5	Cost–Benefit Analysis of Groundwater Protection: Finding the Economically Optimal Level of Groundwater Protection	69
2.3.6	Integrating Economic and Groundwater Models for Simulating Nitrate Pollution in the Upper Rhine Valley Aquifer	71
2.3.7	Designing Economic Instruments for Groundwater Management	73
2.3.7.1	Environment Taxes and Charges	74
2.3.7.2	Tradable Groundwater Licences and Rights	76
2.3.8	Conclusions	77
	References	79

### 3. Groundwater Regulatory Framework

#### Chapter 3.1 European Union Groundwater Policy

*Philippe Quevauviller*

3.1.1	Introduction	85
3.1.2	The 1980 Groundwater Policy Framework	86
3.1.3	Preliminary Assessment (1982)	88
3.1.4	The Groundwater Action Programme (1996)	89
3.1.5	The Groundwater Policy Framework Under the WFD	91
3.1.6	The New Groundwater Directive 2006/118/EC	97
3.1.7	Policy Integration	98
3.1.7.1	Nitrates Directive	98
3.1.7.2	Urban Wastewater Treatment Directive	99
3.1.7.3	Plant Protection Products Directive	100
3.1.7.4	Biocides Directive	101
3.1.7.5	IPPC Directive	101
3.1.7.6	Landfill Directive	102
3.1.7.7	Sewage Sludge Directive	103
3.1.7.8	Other Directives	103

3.1.8	Conclusions: The Need for Worldwide Cooperation	104
	References	105

### **Chapter 3.2 US Drinking Water Regulation: The Ground Water Rule**

*Crystal Rodgers-Jenkins*

3.2.1	Introduction	107
3.2.2	Federal Statutory Authority	108
3.2.3	Challenges in Developing the GWR	108
	3.2.3.1 US Groundwater System Demographics	109
	3.2.3.2 Occurrence Data	110
	3.2.3.3 Public Health Risks	112
3.2.4	The Risk-Targeted Approach	113
3.2.5	Conclusions	116
	Acknowledgements	116
	References	116

## **4. Stakeholder Interactions**

### **Chapter 4.1 Principles of the Common Implementation Strategy of the WFD: The Groundwater Working Group**

*Philippe Quevauviller, Johannes Grath and Andreas Scheidleder*

4.1.1	The Need for Multi-stakeholder Involvement in the Environmental Policy Development and Implementation Process	121
4.1.2	The WFD Common Implementation Strategy	122
	4.1.2.1 General Principles	122
	4.1.2.2 Supporting Activity: The Pilot River Basin Network	123
4.1.3	The CIS Working Group on Groundwater	123
	4.1.3.1 Objectives	123
	4.1.3.2 Leadership and Network	124
	4.1.3.3 Achievements from 2003 to 2006	124
	4.1.3.4 Perspectives for 2007–2009	125
4.1.4	Perspectives	127
	References	127

### **Chapter 4.2 The Pilot River Basin Network: Examples of Groundwater-related Activities**

*Lorenzo Galbiati and Giovanni Bidoglio*

4.2.1	Introduction	128
4.2.2	Science–Policy Integration in the PRB Exercise Linked to Groundwater Management	129

4.2.3	Managing Groundwater Bodies in the Shannon PRB for the Implementation of the WFD	130
4.2.3.1	Groundwater Body Delineation	131
4.2.3.2	Groundwater Management for the WFD	131
4.2.3.3	Example of Risk Assessment Methodology for Diffuse Groundwater Pollution in the Shannon PRB	131
4.2.4	Groundwater Natural Background Levels and Threshold Definition in the Tevere PRBs Under the BRIDGE Project	133
4.2.4.1	Tevere PRB: The Colli Albani Case Study	134
4.2.4.2	Groundwater Status Evaluation by Threshold Values	135
4.2.4.3	Case Study of Salone-Acque Vergini System	136
4.2.4.4	Case Study of the Protected Area of Castelporziano	136
4.2.5	Conclusions	140
	References	141

### **Chapter 4.3 The Harmoni-CA Initiative**

*Geo E. Arnold, Wim J. de Lange and Michiel W. Blind*

4.3.1	Introduction	142
4.3.2	The Harmoni-CA Initiative	143
4.3.3	Process of Bridging the Gap Between Research and Policy/Water Management	143
4.3.3.1	Harmoni-CA Forums and Conferences	144
4.3.3.2	CatchMod/Harmoni-CA Workshops	145
4.3.3.3	Conclusions and Lessons Learned from the Conferences and Workshops	145
4.3.4	Products/Tools of Harmoni-CA	146
4.3.4.1	WISE-RTD Web Portal	146
4.3.4.2	Guidance Documents, Synthesis Reports and Summaries	147
4.3.5	SPI-Water	148
4.3.6	Groundwater Directive	149
	References	149

### **Chapter 4.4 Linking Public Participation to Adaptive Management**

*Claudia Pahl-Wostl, Jens Newig and Dagmar Ridder*

4.4.1	Introduction	150
4.4.2	Adaptive Management and Public Participation	151
4.4.3	Rationales and Requirements for Effective Participation in Groundwater Management	155

4.4.3.1	Rationales and Goals for Public Participation	155
4.4.3.2	Public Participation Provisions in the WFD	157
4.4.3.3	German Experiences with Public Participation	158
4.4.3.4	Example: Regional Participation in Groundwater Protection from Agricultural Nitrate	159
4.4.4	Social Learning in Public Participation: Support for Adaptive Management	161
4.4.4.1	Appropriate Framing Conditions	162
4.4.4.2	Well-Designed Process Management	163
4.4.4.3	Well-Selected Methods and Tools	164
4.4.4.4	Leadership Issues	165
4.4.4.5	An Example of Participation-based Measures in Groundwater Management	167
4.4.5	Conclusions	169
	References	170

## 5. Groundwater Characterization and Risk Assessment

### Chapter 5.1 Groundwater Characterization and Risk Assessment in the Context of the EU Water Framework Directive

*Andreas Scheidleder, Johannes Grath and Philippe Quevauviller*

5.1.1	Legal Background	177
5.1.2	Groundwater Body Identification and Delineation	180
5.1.3	Initial Characterisation	182
5.1.4	Further Characterisation	183
5.1.5	Additional Requirements of the WFD	184
5.1.5.1	Transboundary Groundwater Bodies	184
5.1.5.2	Groundwater Bodies with Lower Objectives	184
5.1.5.3	Interaction with Aquatic and Terrestrial Ecosystems	184
5.1.6	Conceptual Model/Understanding	184
5.1.7	Identification of Driving Forces and Pressures	186
5.1.8	Identification of Significant Pressures	187
5.1.9	Assessing the Impacts of Pressures	188
5.1.9.1	Tools to Assist	188
5.1.9.2	Scaling Issues	189
5.1.10	Evaluating the Likelihood of Failing to Meet the Objectives	190

5.1.11 Reporting on the Characterisation and Risk Assessment	191
References	192

## **Chapter 5.2 Groundwater Quality Background Levels**

*Emilio Custodio and Marisol Manzano*

5.2.1 Introduction	193
5.2.2 Rationale to Establish the Groundwater Quality Baseline	195
5.2.3 Methods to Establish the Natural Baseline Quality of Groundwater	198
5.2.3.1 Study of Major and Trace Inorganic Component Chemistry	200
5.2.3.2 Organic Component Chemistry	202
5.2.3.3 Hydrogeochemical Modelling	206
5.2.3.4 Tracers and Temporal Scales	208
5.2.3.5 Study of Natural Baseline Trends	211
5.2.4 Conclusions	214
Acknowledgements	215
References	215

## **Chapter 5.3 Groundwater Age and Quality**

*Klaus Hinsby, Roland Purtschert and W. Mike Edmunds*

5.3.1 Introduction	217
5.3.2 Groundwater Age Estimation	219
5.3.2.1 The Definition of Groundwater Age	219
5.3.2.2 Environmental Tracers for Absolute Age Estimation	219
5.3.2.3 Geoindicators: Estimating Environmental Change and Relative Ages	223
5.3.2.4 Numerical Modelling of Groundwater Age	225
5.3.3 Groundwater Age and Water Quality and Quantity Issues	226
5.3.3.1 Groundwater Quality as a Function of Age	226
5.3.3.2 Groundwater Age and Monitoring	227
5.3.3.3 Groundwater Age and Water (Over)exploitation	228
5.3.4 Groundwater Age and the Water Framework and Groundwater Directives	228
5.3.4.1 Groundwater Age and Derivation of Natural Background Levels and Threshold Values	228

5.3.4.2	Groundwater Interaction with Dependent Ecosystems	228
5.3.5	Case Studies	229
5.3.5.1	Examples of Danish Case Studies	229
5.3.5.2	Examples of Swiss and German Case Studies	231
5.3.5.3	Example of a British Case Study	234
5.3.6	Conclusions	235
	References	236

## **Chapter 5.4 Characterisation of Groundwater Contamination and Natural Attenuation Potential at Multiple Scales**

*Thomas Ptak and Jerker Jarsjö*

5.4.1	Introduction	240
5.4.2	The Integral Groundwater Investigation Method	241
5.4.2.1	Concepts and Principles	242
5.4.2.2	The Inversion Problem	244
5.4.2.3	Application of the Integral Investigation Method	247
5.4.3	Methodology to Consider Aquifer Parameter Uncertainty and to Delimit Contaminant Source Zones Using Integral Measurements	249
5.4.3.1	Principles	249
5.4.3.2	Decision Tree Approach	255
5.4.3.3	Example of Application at an Industrial Site	258
5.4.4	Quantification of Natural Attenuation Rates Using Integral Measurements	259
5.4.4.1	Principles	259
5.4.4.2	Example of Application at a Former Gasworks Site	260
5.4.5	Multilevel Integral Investigation of Contamination	262
5.4.5.1	The Multilevel Integral Investigation Method	262
5.4.5.2	Example of Application	263
5.4.6	Conclusions	265
	Acknowledgements	266
	References	267

## **Chapter 5.5 Improved Risk Assessment of Contaminant Spreading in Fractured Underground Reservoirs**

*Christos D. Tsakiroglou*

5.5.1	Introduction	269
5.5.1.1	Literature Review	270
5.5.2	Objectives and Approach of the TRACE-Fracture Project	271
5.5.3	Description of Ringe Site	272
5.5.3.1	Conceptual Fracture Network Model	273
5.5.4	Hierarchical Methods for the Determination of Transport Properties	275
5.5.4.1	Multiphase Transport Coefficients of Single Fractures and Fracture Networks	275
5.5.5	Numerical Modelling of NAPL Fate in Unsaturated and Saturated Zones	278
5.5.6	Risk Assessment of Contaminated Sites	281
5.5.6.1	Site Remediation	282
5.5.6.2	<i>In Situ</i> Stimulation/Remediation of Contaminated Sites	286
5.5.7	Socioeconomic Relevance and Policy Implications	287
	Acknowledgements	288
	References	289

## **Chapter 5.6 Groundwater Risk Assessment at Contaminated Sites (GRACOS): Test Methods and Modelling Approaches**

*Peter Grathwohl and Hans van der Sloot*

5.6.1	Introduction	291
5.6.2	Leaching Tests (Heavy Metals, Low-Volatility Organic Compounds)	293
5.6.2.1	Total Composition <i>vs.</i> Aqueous Concentrations	293
5.6.2.2	Percolation <i>vs.</i> Batch or Shaking Tests: Comparison to Field	294
5.6.2.3	Boundary Conditions Leading to Changing Release Rates	299
5.6.2.4	Release Kinetics	299
5.6.2.5	Column Tests: Standardisation and Design	302
5.6.2.6	Concluding Remarks for Leaching Tests	304
5.6.3	Groundwater Risk Assessment for Volatile Compounds	305
5.6.3.1	Vapour-phase Diffusion	305

5.6.3.2	Coupled Models for Simulation of Field Sites	306
5.6.3.3	Concluding Remarks for Risk Assessment for Volatile Compounds	307
5.6.4	Modelling for Groundwater Risk Assessment of Inorganic Constituents	309
5.6.5	Conclusions/Recommendations	312
	Acknowledgement	313
	References	313

## **Chapter 5.7 INCORE: Integrated Concept for Groundwater Remediation**

*Thomas Ertel and Hermann J. Kirchholtes*

5.7.1	Motivation and Basic Concept	316
5.7.2	Cycle I: Plume Screening	319
5.7.3	Cycle II: Source Identification	320
5.7.3.1	GC-MS Fingerprinting for Petroleum Hydrocarbons	320
5.7.3.2	Isotopic Fingerprinting for Chlorinated Hydrocarbons	329
5.7.4	Cycle III: Remediation Strategy	333
5.7.4.1	Remediation Scenarios	333
5.7.4.2	ISIRE: <i>In situ</i> Remediation Technologies—Decision Support	335
5.7.5	Implementation	337
5.7.5.1	Administrative Aspects	337
5.7.5.2	Cost Considerations	337
5.7.5.3	Implementation in Projects	340
	References	340

## **6. Groundwater Monitoring**

### **Chapter 6.1 Groundwater Monitoring in the Policy Context**

*Johannes Grath, Rob Ward and Andreas Scheidleder*

6.1.1	Introduction	345
6.1.2	Monitoring Requirements: Legal Background and Objectives	347
6.1.3	General Principles	349
6.1.3.1	Conceptual Model	349
6.1.3.2	Three-dimensional Characteristics and Variability	349
6.1.3.3	Aquifer Types	351
6.1.4	Chemical Status and Trend Monitoring	352

6.1.4.1	Overall Objectives	352
6.1.4.2	Surveillance Monitoring Programme	352
6.1.4.3	Operational Monitoring Programme	353
6.1.4.4	Selection of Representative Monitoring Sites	353
6.1.4.5	Selection of Monitoring Determinands	356
6.1.4.6	Monitoring Frequency	356
6.1.5	Quantity (Water Level) Monitoring	359
6.1.5.1	Overall Objective	359
6.1.5.2	Monitoring Parameters	360
6.1.5.3	Selection of Monitoring Density	361
6.1.5.4	Monitoring Frequency	361
6.1.6	Review and Update	362
	References	362

## **Chapter 6.2 Screening Methods for Groundwater Monitoring**

*Catherine Gonzalez, Anne-Marie Fouillac and  
Richard Greenwood*

6.2.1	Groundwater Monitoring Requirements and Specific Issues	363
6.2.2	Environmental Variability: Spatial and Temporal Groundwater Quality Variability	366
6.2.3	Screening Methods Towards Groundwater Monitoring Needs	368
6.2.3.1	Common Physicochemical Methods used for Groundwater Assessment	368
6.2.3.2	Emerging Screening Tools	369
6.2.3.3	Potential Uses of Emerging Tools	371
6.2.4	Screening Methods and Priority Substances	374
6.2.5	New Trends and Perspectives	375
	References	376

## **Chapter 6.3 Quality Assurance for Groundwater Monitoring**

*Philippe Quevauviller and Stéphane Roy*

6.3.1	Need for Quality Assurance for Groundwater Analysis	378
6.3.2	Within-Laboratory Quality Measures	379
6.3.3	Statistical Control	379
6.3.4	Comparison of Analytical Methods	380
6.3.5	Interlaboratory Studies	380
6.3.5.1	Introduction	380
6.3.5.2	Scope of the Groundwater Interlaboratory Programme	381

6.3.6	Certified Reference Materials	383
6.3.6.1	General Principles	383
6.3.6.2	CRMs for Major Elements in Groundwater	384
6.3.6.3	CRMs for Trace Elements in Groundwater	387
6.3.6.4	CRMs for Bromide in Groundwater	390
6.3.6.5	Conclusions: Availability of Water CRMs	391
6.3.7	Assessment of Uncertainty Linked to Groundwater Sampling. A Case Study: The METREAU Project	392
6.3.7.1	Introduction	392
6.3.7.2	Groundwater Sampling: New Devices	393
6.3.7.3	Uncertainties Associated with the Sampling Stage	397
6.3.7.4	Conclusions	399
	Acknowledgements	400
	References	401

## 7. Groundwater Pollution Prevention and Remediation

### Chapter 7.1 Prevention and Reduction of Groundwater Pollution at Contaminated Megasites: Integrated Management Strategy and its Application on Megasite Cases

*Jeroen Ter Meer, Hans Van Duijne, Rob Nieuwenhuis and Huub Rijnaarts*

7.1.1	Addressing Groundwater on Large (Former) Industrial Sites	405
7.1.2	Risk-based Approach for Contaminated Megasites	406
7.1.2.1	Integrated Management Strategy	406
7.1.2.2	Megasite Objectives	407
7.1.2.3	Concept for Megasites	407
7.1.2.4	Megasite Categories	408
7.1.2.5	Modelling and Monitoring	410
7.1.2.6	Risk Management Scenarios	410
7.1.3	Relevance of Risk-based Management of Megasites for the Groundwater Directive	412
7.1.3.1	Case Studies	412
7.1.4	Conclusions	420
	References	420

### Chapter 7.2 Forecasting Natural Attenuation as a Risk-based Groundwater Remediation Strategy

*Ryan D. Wilson, Steven F. Thornton and David N. Lerner*

7.2.1	The Nature of Groundwater Pollution from Point Sources	421
-------	--	-----

7.2.1.1	Sources and Plumes	421
7.2.1.2	Risk Assessment: Is Clean-up Required?	422
7.2.1.3	Options for Remediation	423
7.2.2	Natural Attenuation of Contaminants	424
7.2.2.1	Why Natural Attenuation is Important	424
7.2.2.2	Contributing Processes	424
7.2.2.3	Plume Development and Life Phases	427
7.2.2.4	Biodegradation in Detail	429
7.2.2.5	Hydrogeology and Heterogeneity	432
7.2.3	Current Natural Attenuation Assessment Practices	433
7.2.3.1	Establishing Whether Natural Attenuation is Occurring	435
7.2.3.2	Establishing Whether Natural Attenuation is Sufficient	437
7.2.3.3	Steps in Natural Attenuation Assessment	439
7.2.4	CORONA: A New Natural Attenuation Assessment Philosophy	442
7.2.4.1	Core and Fringe Controlled Plumes	442
7.2.4.2	Preferred CORONA Site Instrumentation	443
7.2.4.3	CoronaScreen Models	443
7.2.4.4	Output Goals	444
7.2.4.5	Model Descriptions	446
7.2.5	Recommendations	450
	Acknowledgements	451
	References	451

**Chapter 7.3 Diffuse Groundwater Quality Impacts from Agricultural Land-use: Management and Policy Implications of Scientific Realities**

*Stephen Foster and Lucila Candela*

7.3.1	Why is Agricultural Land-use the Greatest Challenge Facing the New EC Water Directives?	454
7.3.1.1	How Does Agricultural Land-use Impact on Groundwater Quality?	457
7.3.1.2	Are All Types of Groundwater Body Equally Threatened by Agricultural Practices?	460
7.3.1.3	What can be Done to Make Agricultural Cropping more “Groundwater Friendly”?	462
7.3.2	Guidelines on “Best Agricultural Practice”	462
7.3.3	Reducing Overall Cultivation Intensity	463
7.3.4	Constraints on Pesticide Manufacture, Sale or Use	464
7.3.5	Improving Irrigation Water Use Efficiency	465
7.3.5.1	What are the Main Policy Implications for Groundwater Body Quality Protection?	466

Acknowledgements	469
References	469

## 8. Integrated River Basin Management

### Chapter 8.1 Integrated Management Principles for Groundwater in the WFD Context

*Philippe Quevauviller*

8.1.1	Introduction	473
8.1.2	Challenges Linked to Groundwater Management	474
8.1.3	River Basin Management Principles	475
	8.1.3.1 Water and Its Environment	475
	8.1.3.2 River Basin Management Objectives	476
8.1.4	Operational Management	476
	8.1.4.1 Pollution Control	477
	8.1.4.2 Voluntary Agreements	478
	8.1.4.3 Cost Recovery	479
	8.1.4.4 Institutional Structure	479
	8.1.4.5 Infrastructure vs. Regulation, Financing and Empowerment	480
	8.1.4.6 Decentralisation	481
	8.1.4.7 Privatisation	481
8.1.5	Planning	482
	8.1.5.1 Functions of Plans and Policies	482
	8.1.5.2 The Planning Process	482
	8.1.5.3 Planning Systems	483
8.1.6	Analytical Support	483
	8.1.6.1 Analytical Support for Operational Management: Main Challenges	485
	8.1.6.2 Analytical Support and the Strategic Level: New Directions	486
8.1.7	International River Basins	487
	8.1.7.1 The Challenge	487
	8.1.7.2 International Basins at the Global Level	488
	8.1.7.3 International River Basin Organisations	488
	8.1.7.4 Interbasin Co-operation (Twinning)	489
8.1.8	Public Participation	489
	8.1.8.1 At European Level	489
	8.1.8.2 At International Level	491
8.1.9	Conclusions	491
	References	492

**Chapter 8.2 System Approach to Environmentally Acceptable Farming***Ramon Laplana and Nadine Turpin*

8.2.1	Introduction	494
8.2.2	Integrated River Basin Management with BMPs to Mitigate NPS Pollution	495
8.2.2.1	What are Best Management Practices?	495
8.2.2.2	BMP Typology	497
8.2.2.3	How to Design Acceptable BMPs ?	497
8.2.3	How to Build a Cost-effectiveness Grid of Bundles of BMPs	502
8.2.3.1	Effectiveness Assessment	502
8.2.3.2	Implementation Costs	505
8.2.3.3	Building of the Comparison Grid	507
8.2.4	Conclusions	508
	References	509

**Chapter 8.3 WATCH. Water Catchment Areas: Tools for Management and Control of Hazardous Compounds***Thomas Track, Steve Setford, Sharon Huntley, Claudine Vermot-Desroches, John Wijdenes, Damia Barceló, Monica Rosell Linares, Peter Werner, Jens Fahl, Hans-Peter Rohns, Claudia Forner, Jesper Holm, Douglas Graham, Eckard Hitsch and Josef Lintschinger*

8.3.1	Introduction	511
8.3.2	Near-infrared Fuel Leak Sensor	513
8.3.2.1	Description of Results	514
8.3.2.2	Conclusion and Perspectives	516
8.3.3	Analysis of MTBE and Related Compounds in Soil and Groundwater	517
8.3.3.1	Description of Results	517
8.3.3.2	Conclusions and Perspectives	519
8.3.4	Immunoassay for Field-based Determination of MTBE	519
8.3.4.1	Description of Results	520
8.3.4.2	Conclusion and Perspectives	523
8.3.5	Elucidation of Stimulating and Inhibiting Effects on Biodegradation	524
8.3.5.1	Description of Results	525
8.3.5.2	Conclusions and Perspectives	527
8.3.6	Development of an Early Warning and Management System for Groundwater Resources	528

8.3.6.1	Description of Results	528
8.3.6.2	Conclusions and Perspectives	531
	Acknowledgement and Further Information	532

## 9. Groundwater Status Assessment

### Chapter 9.1 Methodology for the Establishment of Groundwater Environmental Quality Standards

*Dietmar Müller and Anne-Marie Fouillac*

9.1.1	Introductory Remarks on Science–Policy Integration Needs	535
9.1.2	Towards an Integrated Management of Groundwater Resources	536
9.1.3	The Framework: An Integrated Characterisation Process	536
9.1.4	Criteria to Assess Quality and Status of Groundwater	537
9.1.4.1	Natural Background Levels	538
9.1.4.2	Generic Reference Values	538
9.1.4.3	Attenuation Criteria	540
9.1.5	Receptor-oriented Quality Standards Derived by a Tiered Approach	541
9.1.6	How to Determine a Threshold Value (Example: Surface Water)	541
9.1.7	Compliance Regime for Groundwater Quality Standards	543
9.1.8	Conclusions	543
	Acknowledgement	544
	References	544

### Chapter 9.2 Pesticides in European Groundwaters: Biogeochemical Processes, Contamination Status and Results from a Case Study

*Christophe Mouvet*

9.2.1	Introduction	545
9.2.2	Major Processes Involved in the Transport of Pesticides from the Soil to and in Groundwater	546
9.2.2.1	Sorption and Degradation	547
9.2.2.2	Biodegradation in Microcosms with Solids from the Unsaturated Zone Below the Root Zone	548
9.2.2.3	Sorption on Solids from the Unsaturated Zone	550

9.2.2.4	Biodegradation in Microcosms with Solids and Water from the Saturated Zone	550
9.2.2.5	Sorption on Solids from the Saturated Zone	553
9.2.2.6	Field Studies Involving both Sorption and Biodegradation	553
9.2.2.7	Synthesis of Published Results on Sorption and Biodegradation below the Root Zone	555
9.2.3	Status of Groundwater Contamination by Pesticides at European Scale	555
9.2.3.1	The Waterbase Data Base of the European Environment Agency, June 2006	555
9.2.3.2	The Indicator Fact Sheet of the European Environment Agency	558
9.2.4	Status of Groundwater Contamination by Pesticides in Selected European Countries or Regions	559
9.2.4.1	Status in Italy (Adapted from Refs. 60 and 61)	559
9.2.4.2	Status in Wallony (Belgium)	561
9.2.4.3	Status in Sweden	564
9.2.4.4	Status in France	565
9.2.4.5	Status in the UK	568
9.2.4.6	Synthesis of the Data at National and Regional Scales	570
9.2.5	A Case Study: The Brévilles Spring	570
9.2.5.1	Brief Description of the System and the Methods Used	571
9.2.5.2	Main Results from the Piezometer Network	572
9.2.5.3	Main Results from the Monitoring of the Spring	573
9.2.5.4	Conclusions from the Brévilles Case Study	576
9.2.6	Conclusions and Perspectives	576
	Acknowledgements	579
	References	579

**Chapter 9.3 Evaluation of the Quantitative Status of Groundwater–Surface Water Interaction at a National Scale**

*Hans Jørgen Henriksen, Lars Trolborg, Per Nyegaard, Anker L. Højberg, Torben O. Sonnenborg and Jens Christian Refsgaard*

9.3.1	Introduction	584
9.3.2	The National Water Resource Model (DK Model)	587
9.3.2.1	Conceptual Model	587
9.3.2.2	Processes and Data	587
9.3.2.3	Model Code	589

9.3.2.4	Model Parameterisation and Calibration	589
9.3.2.5	Model Validation	591
9.3.2.6	A Few Examples of Model Results	591
9.3.3	Criteria for Sustainable Groundwater Abstraction	592
9.3.4	Model Results	596
9.3.5	Discussion and Conclusions	600
9.3.5.1	Appropriateness of Approach for the WFD	600
9.3.5.2	Linking the Modelling Approach with Monitoring	601
9.3.5.3	Strengths and Weaknesses of Approach	602
9.3.5.4	Novelty of this Work	604
	Acknowledgements	604
	References	604

## 10. Modelling

### Chapter 10.1 Conceptual Models in River Basin Management

*Antony Chapman, Jos Brils, Erik Ansink, Cécile Herivaux and Pierre Strosser*

10.1.1	Introduction	611
10.1.2	Integrated Water Resource Management	612
10.1.3	Conceptual Models in the Context of River Basin Management	613
10.1.3.1	What are Conceptual Models?	613
10.1.3.2	What Role can Conceptual Models Play?	614
10.1.3.3	From Conceptual Models to Quantitative/Computer-based Models	615
10.1.4	Building Conceptual Models in the Context of River Basin Management: Some Principles	617
10.1.4.1	The DPSIR Framework as a Guide	617
10.1.4.2	Investigating the Dynamics of River Basin Systems	618
10.1.4.3	Stakeholder Integration and Response	619
10.1.5	Experience from the Aqua terra Research Project	620
10.1.5.1	Context and Objectives	620
10.1.5.2	Identifying the Main Environmental Issues Relevant to the Case Studies	621
10.1.5.3	Integrating Stakeholders' Views	622
10.1.5.4	Developing Simplified Representations of the Systems Investigated	622
10.1.5.5	Preliminary Lessons from the Experience of INTEGRATOR	624
10.1.6	Conclusions	625

Acknowledgements	626
References	626

**Chapter 10.2 Modelling Reactive Transport of Diffuse Contaminants: Identifying the Groundwater Contribution to Surface Water Quality**

*Hans Peter Broers, Bas van der Grift, Jasper Griffioen and Ruth Heerdink*

10.2.1 Introduction	630
10.2.2 Framing a Conceptual Model	631
10.2.3 Building a Regional Model for the Kempen Area	634
10.2.4 Verifying the Model: Setting up a Customised Monitoring System	637
10.2.5 Predictions of Groundwater Contributions to Surface Water Quality	640
10.2.5.1 Discussion	641
10.2.5.2 Policy Aspects	642
10.2.6 Conclusions	643
Acknowledgement	643
References	643

**11. Conclusions: Further Policy and Research Needs**

**Chapter 11.1 SNOWMAN: An Alternative for Transnational Research Funding**

*Jörg Frauenstein and H. Johan Van Veen*

11.1.1 Introduction	647
11.1.1.1 Transnational Research	647
11.1.1.2 Soil and Groundwater Management	649
11.1.1.3 Forerunning Projects and Significant Scientific Input	651
11.1.2 An ERA-NET Bridging the Gap Between National and European Research	654
11.1.3 The Way Forward	654
11.1.3.1 The Meaning of Cooperation	654
11.1.3.2 A Stepwise Approach Towards Cooperation	657
11.1.4 The Upcoming Coordinated Call	662
11.1.4.1 Objectives and Projects	663
11.1.4.2 The Principles of the Coordinated Call	664
11.1.5 Conclusions	668
Acknowledgements	669
References	670

## **Chapter 11.2 Incorporation of Groundwater Ecology in Environmental Policy**

*Dan L. Danielopol, Christian Griebler, Amara Gunatilaka, Hans Jürgen Hahn, Janine Gibert, F. Mermillod-Blondin, Giuseppe Messina, Jos Notenboom and Boris Sket*

11.2.1	Introduction: Groundwater Science and the New Order	671
11.2.2	The New Groundwater Ecology: Its Interest for Water Management Projects and/or Water Policy Planners	672
11.2.3	The Groundwater Ecosystem Approach as a Framework for Planning Pollution Prevention and/or Environmental Protection Strategies	674
11.2.4	Diversity of Groundwater Habitats and Organisms: Their Usefulness for Environmental Monitoring Programmes	680
11.2.5	Groundwater-Dependent Ecosystems: A Holistic Representation	683
11.2.6	Overview: The Expanded Order (Achievements and Future Needs)	684
	Acknowledgements	686
	References	686

## **Chapter 11.3 Towards a Science–Policy Interface (WISE-RTD) in Support of Groundwater Management**

*Philippe Quevauviller*

11.3.1	Introduction	690
	11.3.1.1 General Needs	691
	11.3.1.2 Different Levels of Interactions	691
11.3.2	Introduction to WISE	693
	11.3.2.1 What is WISE?	693
	11.3.2.2 Why do we Need WISE?	694
	11.3.2.3 What is the Objective of the WISE Process?	694
	11.3.2.4 Does WISE Already Exist?	695
	11.3.2.5 Who will Use WISE?	695
	11.3.2.6 What will WISE be Used for?	696
	11.3.2.7 What are the Next Steps in WISE Development?	697
11.3.3	EU RTD Funding Mechanisms	697
	11.3.3.1 FP5 Research Projects	697
	11.3.3.2 FP6 Targeted Research and Integrated Projects	698

<i>Contents</i>	xxxi
11.3.3.3 FP6 ERA-NET Projects	698
11.3.3.4 Projects Issued from the Scientific Support to Policies (SSP) Priority	699
11.3.3.5 Orientations of the 7th Framework Programme	699
11.3.3.6 LIFE: Demonstration Projects	700
11.3.4 An Operational Web Interface: WISE-RTD	700
11.3.4.1 The Harmoni-CA Initiative	700
11.3.4.2 The WISE-RTD Web Portal	701
11.3.5 Conclusions: Needs for an Overall Science–Policy Integration Framework	701
References	703
<b>Appendices</b>	
Appendix I Outline of Water Framework Directive	704
Appendix II Outline of Groundwater Directive	711
<b>Subject Index</b>	716
