

Contents

Chapter 1 Archeobacterial phototaxis	1
<i>Martin Engelhard, Georg Schmies, and Ansgar A. Wegener</i>	
Chapter 2 Invertebrate rhodopsins	40
<i>Joachim Bentrup, and Reinhard Paulsen</i>	
Chapter 3 Vertebrate rhodopsin	77
<i>Oliver P. Ernst, Klaus Peter Hofmann, and Krzysztof Palczewski</i>	
Chapter 4 Rhodopsin-related proteins, Cop1, Cop2 and Chop1, in <i>Chlamydomonas reinhardtii</i>	124
<i>Markus Fuhrmann, Werner Deininger, Suneel Kateriya, and Peter Hegemann</i>	
Chapter 5 The phytochromes: spectroscopy and function	136
<i>Wolfgang Gärtner, and Silvia E. Braslavsky</i>	
Chapter 6 Phytochrome signal transduction	181
<i>Ferenc Nagy, Eva Kevei, Klaus Harter, and Eberhard Schäfer</i>	
Chapter 7 Phytochromes and phytochrome-like proteins in cyanobacteria	203
<i>Tilman Lamparter, and Jon Hughes</i>	
Chapter 8 The family of photoactive yellow proteins, the xanthopsins: from structure and mechanism of photoactivation to biological function	228
<i>Klaas J. Hellingwerf, Johnny Hendriks, Michael van der Horst, Andrea Haker, Wim Crielaard, and Thomas Gensch</i>	

Chapter 9	
Higher plant phototropins: photoreceptors not only for phototropism	272
<i>Michael Salomon</i>	
Chapter 10	
Cryptochromes and their functions in plant development	303
<i>May Santiago-Ong, and Chentao Lin</i>	
Chapter 11	
Blue light receptors in fern and moss	328
<i>Masamitsu Wada</i>	
Chapter 12	
Photoreceptors resetting the circadian clock	343
<i>Paul F. Devlin</i>	
Subject Index	369
