

Acknowledgements

First of all, I should thank Simon Campbell for persuading me to take on this task and providing valuable feedback on the initial ideas for the book. As well as the authors of the various chapters, I am very grateful to Mark Murcko of Vertex and Steve Burley of Structural Genomics for commenting on the initial outline of the material to be covered in the book and to Harry Finch, Guy Dodson, Eleanor Dodson, James Murray, Martin Drysdale, Jim Brannigan and Mike Bird for thoughts and discussions as the project progressed. I should also thank all past and present members of the Structural Sciences division at what is now Vernalis. It was a great experience starting up a complete new group and sets of methods in such a supportive and enthusiastic environment and to begin to learn some of the issues in “real” drug discovery. My thanks to David Knowles and Simon Sturge for the opportunity.

Finally, I thank all the authors who have contributed to this book. One of the challenges with this type of book is that the scientists who are the most authoritative in their discipline are usually too busy with their science or “real” papers. I was therefore extremely grateful to be able to recruit such a cast-list.
