Chapter 1 Introduction

1.1	What is ESR Spectroscopy?	1
1.2	The ESR Experiment	3
1.2.1	Sensitivity	4
1.2.2	Saturation	5
1.2.3	Nuclear Hyperfine Interaction	5
1.3	Operation of an ESR Spectrometer	7
1.4	Optimization of Operating Parameters	11
1.4.1	Microwave Frequency	11
1.4.2	Microwave Power	12
1.4.3	Center Field, Sweep Width and Field Offset	13
1.4.4	Sweep Time	14
1.4.5	Modulation Frequency	14
1.4.6	Second Harmonic Detection	15
1.4.7	Modulation Amplitude	15
1.4.8	Modulation Phase	15
1.4.9	Signal Gain	16
1.4.10	Filter Time Constant	16
1.5	Applications of ESR Spectroscopy	17
1.5.1	Electronic Structure Determination	17
1.5.2	Analytical Applications	17
1.5.3	Determination of Rates	18
	References	18

Chapter 2 Isotropic ESR Spectra of Organic Radicals

2.1	Isotropic ESR Spectra	21
2.1.1	Line Positions in Isotropic Spectra	21
2.1.2	Hyperfine Coupling Patterns	22
2.1.3	Second-order Splittings	25
2.1.4	Spin Hamiltonian Parameters from Spectra	26

2.2	Interpretation of Isotropic Parameters	27
2.3	Line Widths in Isotropic Spectra	29
2.3.1	Incomplete Averaging of Anisotropies	29
2.3.2	Rates of Fluxionality from Line Widths	30
2.4	Organic Radical Reactions	32
2.5	Analysis of Isotropic ESR Spectra	32
2.5.1	Preliminary Examination of the Spectrum	33
2.5.2	What do you Expect to See?	33
2.5.3	Are the Gross Features of the Spectrum Consistent with the Model?	34
2.5.4	An Example	34
2.5.5	Detailed Analysis for Determination of Parameters	36
2.5.6	Computation of Multiplet Intensity Ratios	37
2.5.7	Multiplet Patterns due to Isotopomers	38
2.5.8	Second-order Shifts in Line Positions	39
2.6	Related Techniques (ENDOR)	41
	References	42

Chapter 3 Isotropic Spectra of Organometallic Radicals

3.1	Second-order Effects on Line Positions	44
3.2	Understanding the Variation in Line Widths	47
3.3	Puzzling Line Shapes	48
3.4	Use of ESR Spectra to Determine Formation Constants	49
	References	51

Chapter 4 Anisotropic ESR Spectra

4.1	Introduction	52
4.2	Solid-state ESR Spectra	53
4.2.1	Spectra of Dilute Single Crystals	54
4.2.2	Analysis of Frozen Solution Spectra	55
4.3	Interpretation of the g -Matrix	59
4.4	Interpretation of the Hyperfine Matrix	60
4.5	Organometallic Examples	63
4.5.1	A Low-spin Manganese(II) Complex	63
4.5.2	Some Cobalt(0) Radical Anions	66
4.6	Organic Examples of Solid-state ESR Spectra	69
4.6.1	Irradiated Single Crystal of Glycylglycine	69
4.6.2	X-irradiated Single Crystal of Methylene Diphosphonic Acid	70
4.7	Non-coincident Matrix Axes	71

4.7.1	Symmetry Considerations	71
4.7.2	Experimental Determination of Matrix Axis Orientations	72
4.8	Organometallic Examples of Non-coincident Matrix Axes	73
4.8.1	A Chromium Nitrosyl Complex	73
4.8.2	Iron Pentacarbonyl Ions	74
4.8.3	Another Low-spin Manganese(II) Complex	76
4.8.4	Chromium(I) Piano-stool Complex	77
4.8.5	$[(RCCR')Co_2(CO)_6]^-$ and $[SFeCo_2(CO)_9]^-$	79
4.8.6	(<i>o</i> -Xylylene)-Mn(dmpe) ₂	81
4.8.7	Cobalt Dithiolene Complexes	86
4.9	“g-Strain”	87
	References	89
Chapter 5 ESR Kinetic Studies		
5.1	Bloch’s Phenomenological Model	92
5.1.1	Derivation of the Bloch Equations	94
5.1.2	Steady-state Solution	95
5.2	Chemical Exchange - The Modified Bloch Equations	98
5.3	Further Discussion of Line Shapes	102
5.4	Applications of the Modified Bloch Equations	102
5.5	Alternating Line Width Effects	107
5.6	Spin Labels	108
	References	110
Chapter 6 ESR Spectra of Biradicals, Triplet States, and other $S > 1/2$ Systems		
6.1	Biradicals	112
6.1.1	Exchange Coupling	113
6.2	Organic Triplet State Molecules and the Dipolar Interaction	117
6.2.1	Organic Triplet State Molecules	122
6.3	Transition Metal Complexes with $S > 1/2$	122
6.3.1	Spin–Orbit Coupling	122
6.3.2	High-spin Transition Metal Ions	126
6.3.3	Examples: $K_3Cr(CN)_6$ and $K_4V(CN)_6$	130
	References	132
Chapter 7 Perturbation Theory Calculations		
7.1	Second-order Perturbation Theory Treatment of Spin Hamiltonian with Non-coincident <i>g</i> - and <i>A</i> -axes	133
7.1.1	The Electron Zeeman Term	133

<i>Contents</i>		xi
7.1.2	Nuclear Hyperfine Interaction	135
7.1.3	Perturbation Theory Treatment of Hyperfine Term	138
7.1.4	Example Application of these Results	144
7.2	Quadrupole Coupling	145
7.2.1	Perturbation Theory Treatment of Quadrupole Term	146
7.2.2	Example Application of Analysis Quadrupole Effects	149
	References	152
Appendix 1	Physical Constants, Conversion Factors, and Properties of Nuclei (Tables A1.1–A1.4)	
	Example	155
	References	157
Appendix 2	Advanced ESR Methods	
A2.1	High Frequency ESR	159
A2.2	Double Resonance	161
A2.3	Pulsed Methods	162
	References	164
Subject Index		169
