## Section 1 Expression and Purification of Membrane Proteins

### Chapter 1 Refolding of G-Protein-Coupled Receptors 3

*Jean-Louis Banères*

1	Introduction	3
2	Refolding of Membrane Proteins	4
3	<i>In Vitro</i> Protein Refolding	6
4	GPCR <i>In Vitro</i> Refolding	6
4.1	Resolubilization from Inclusion Bodies	6
4.2	Refolding	7
4.3	Refolding of GPCR Fragments	8
4.4	Refolding of Intact GPCRs	9
5	Conclusion	12
	References	13

### Chapter 2 Expression of Genes Encoding Eukaryotic Membrane Proteins in Mammalian Cells 15

*Philip J. Reeves*

1	Introduction	15
2	Mammalian Cell Hosts and Gene Expression Vectors	16
3	Delivery and Maintenance of Expression Vectors in Mammalian Cells	16
3.1	Transient Transfection	17
3.2	Stable Transfection	17
3.2.1	A Procedure for Stable Transfection of HEK293S Cells	18
3.3	Stable Episomal Replication	19
3.4	Viral Infection	19
4	HEK293S Stable Cell Lines for High-Level Expression of Eukaryotic Membrane Proteins	20
4.1	Constitutive Expression	20
4.2	Tetracycline-Regulated Gene Expression	21

4.3	A Plasmid for Tetracycline-Regulated Expression of Opsin	22
4.3.1	Construction and Characterization of HEK293S Stable Cell Lines for Inducible Gene Expression	23
5	Scale Up of Culture Growth and Rhodopsin Purification	24
5.1	Growth of HEK293S Cells in Suspension Culture Using a Bioreactor	24
5.2	Immunoaffinity Purification of Rhodopsin	25
6	Preparation of Eukaryotic Membrane Proteins Containing Simple N-Glycans	25
7	Outlook for the Use of HEK293S Tetracycline-Inducible Cell Lines for Large-Scale Preparation of Other Eukaryotic Membrane Proteins	26
	References	28

### **Chapter 3 Expression of Recombinant G-Protein Coupled Receptors for Structural Biology 29**

	<i>Filippo Mancia and Wayne A. Hendrickson</i>	
1	Introduction	29
1.1	Signal Transduction through G-protein Coupled Receptors	29
1.2	Structural and Functional Characteristics of GPCRs	30
1.3	Structure Determination of GPCRs	32
2	Expression of Recombinant GPCRs	34
2.1	Overview	34
2.2	Bacteria as Hosts for the Production of Functional GPCRs	35
2.3	Production of GPCRs in Stably Transfected Mammalian Cells	39
2.4	Production of GPCRs <i>via</i> Transient Transfection or Viral Infection of Mammalian Cells	42
2.5	Production of GPCRs in Yeast	42
2.6	Production of GPCRs in Insect Cells	43
2.7	“ <i>In Vivo</i> ” Expression in the Eye	43
2.8	Extra-Membranous Expression Systems	44

<i>Contents</i>		xiii

### Section 3 New Membrane Protein Structures

#### Chapter 11 Aquaporins: Integral Membrane Channel Proteins **195**

*Robert M. Stroud, William E.C. Harries, John Lee, Shahram Khademi and David Savage*

1	Introduction	195
2	The Exclusion Barrier to Ions and Protons in Aquaporins	199
2.1	Global Orientational Tuning by the NPA Motif	199
2.2	Helix Dipole	201
2.3	Electrostatic Desolvation Penalty	201
3	Selectivity in the Aquaporin Family	201
4	Permeation of Substances Other than Water and Glycerol	203
4.1	Conductance of Other Molecules	203
5	Aquaporin Monomer Associations and their Functional Implications	204
5.1	The Eye Lens: A Brief History of Aquaporin 0 Research	204
5.2	Aquaporin 0 Monomer Structure and Organization	205
5.3	Extracellular Domain Interactions	208
	Acknowledgment	209
	References	209

#### Chapter 12 Gas Channels for Ammonia **212**

*Shahram Khademi and Robert M. Stroud*

1	Introduction	212
2	The Structure of Ammonia Channel	213

2.1	Overall Structure of AmtB: A New Family of 11-Crossing Proteins	213
2.2	A Membrane Protein with In-Plane Quasi Twofold Symmetry	217
2.3	The Ammonia Pathway	218
3	Reconstituted into Liposomes AmtB Acts as a Channel that Conducts NH <sub>3</sub>	222
4	The Mechanism of Conduction	224
4.1	pH-Dependent Effects	224
4.2	Competitive Inhibition	226
4.3	Transmembrane Potential	226
5	The Rh Proteins	227
6	Comparison with Aquaporins	228
7	Comparison with K <sup>+</sup> Channel	230
	Acknowledgment	230

<b>Chapter 18</b>	<b>Structure of Photosystems I and II</b>	<b>320</b>
	<i>Raimund Fromme, Ingo Grotjohann and Petra Fromme</i>	
1	Introduction to Oxygenic Photosynthesis	320
2	Photosystem II	324
2.1	Overview	324
2.2	The Protein subunits in Photosystem II	325
2.2.1	The Core Subunits D1 and D2 (PsbA and PsbD)	325
2.2.2	The Antenna Proteins CP47 and CP43 (PsbB and PsbC)	325
2.2.3	Cytochrome $b_{559}$ (PsbE and PsbF)	325
2.2.4	The Small Membrane-Intrinsic Subunits	327
2.2.5	The Lumenal Subunits PsbO, PsbV, and PsbU	327
2.3	The Electron Transport Chain of Photosystem II	327
2.3.1	The Acceptor Site of the Electron Transport Chain in Photosystem II	328
2.3.2	The Donor Site of the Electron Transfer Chain of Photosystem II	329

2.4	The Antenna System of Photosystem II	331
3	Photosystem I	332
3.1	Overview	332
3.2	The Protein Subunits of Photosystem I	332
3.2.1	The Core of Photosystem I: The Large Subunits PsaA and PsaB	333
3.2.2	The Small Transmembrane Subunits in Photosystem I	336
3.2.3	The Stromal Hump of PSI: PsaC, PsaD, and PsaE	338
3.3	The Electron Transfer Chain of Photosystem I	339
3.3.1	P700: The Primary Electron Donor	340
3.3.2	A: The Initial Electron Acceptor	340
3.3.3	A <sub>0</sub> : The First Stable Electron Acceptor	341
3.3.4	A <sub>1</sub> : The Phylloquinone	341
3.3.5	F <sub>X</sub> : The First FeS Cluster	342
3.3.6	F <sub>A</sub> and F <sub>B</sub> : The Terminal FeS Clusters	342
3.4	The Antenna System of Photosystem I	342
3.4.1	The Chlorophylls	343
3.4.2	The Carotenoids	343
3.4.3	The Lipids in Photosystem I	344
4	Conclusion and Outlook	344
