

Contents

Chapter 1	Overview	1
	<i>Nicholas P. Farrell</i>	
1	Introduction	1
2	Metal Ions in Disease. The Use of Chelating Agents	2
	Metalloproteins as Drug Targets	2
	Zinc and the Human Immunodeficiency Virus	4
	Zinc Fingers as Medicinal Target	4
	Matrix Metalloproteinases	4
3	Modulation of Cellular Responses by Metal-containing Drugs	6
4	Metal-based Chemotherapeutic Drugs	6
5	Metal Complexes as Diagnostic Agents	7
6	Summary and Acknowledgements	9
	References	9
Chapter 2	Biomedical Uses of Lithium	11
	<i>Nicholas J. Birch</i>	
1	Introduction	11
2	Background	11
3	New Uses of Lithium	13
4	Chemistry of Lithium	14
5	Distribution of Lithium in the Body and in Cells	15
6	Studies Using Lithium Isotopes	16
	Tissue Localisation and Transport of Lithium	16
	Cellular Localisation of Lithium	18
7	Biochemistry of Lithium	18
	Magnesium and Calcium	18
	Lithium and the Phosphoinositide Signalling System	19
8	Lithium at the Cell Periphery: A Novel Viewpoint	20
9	Conclusion	21
	References	21

Chapter 3	Gold Complexes with Anti-arthritic, Anti-tumour and Anti-HIV Activity	26
	<i>C. Frank Shaw III</i>	
1	Introduction	26
	Chrysotherapy	26
	History of Medicinal Uses	26
	Rheumatoid Arthritis and Putative Mechanisms of Action	28
2	Gold Chemistry	29
	Oxidation States	29
	Gold(I) Complexes	30
	Gold(III) Complexes	31
	Oxidation–Reduction Potentials	31
3	Gold Biochemistry and Pharmacology	32
	<i>In Vivo</i> metabolism and Ligand Displacement	32
	Cellular Chemistry – The Thiol Shuttle Model	33
	Protein Chemistry	35
	Serum Albumin	35
	Hemoglobin	37
	Aurothioneins	38
	Glutathione Peroxidase	40
	Cyanide Metabolites	42
	Oxidation States <i>In Vivo</i>	43
	Antigenic Peptides	44
4	Anti-Tumour Activity	47
	Auranofin and Analogues	47
	Bis(diphenylphosphine)ethane Gold Complexes	50
	Gold Complexes of Known Anti-Tumour Agents	51
	Cisplatin Analogues	51
	Prospects for Gold-Based Anti-Cancer Drugs	52
5	Anti-HIV Activity	52
6	Conclusions	53
	References	54
Chapter 4	Nitric Oxide in Physiology and Medicine	58
	<i>Anthony R. Butler and Peter S. Rhodes</i>	
1	Introduction	58
2	Physical Properties of NO	59
3	Measurement of NO in Biological and Chemical Systems	60
	Direct Measurement	60
	Indirect Measurement	61
4	Nitric Oxide and the Respiratory System	64
5	Nitric Oxide and the Cardiovascular System	66
6	Nitric Oxide and the Nervous System	69
	Peripheral Nervous System	69

<i>Contents</i>	ix
Synaptic Plasticity	70
Cerebral Circulation	71
Neurodegeneration	71
7 Nitric Oxide and the Immune System	72
References	74
Chapter 5 Therapeutic Aspects of Manganese(II)-based Superoxide Dismutase Mimics	77
<i>Randy H. Weiss and Dennis P. Riley</i>	
1 Introduction	77
2 Results and Discussion	78
Therapeutic Strategy of Superoxide Dismutase Mimics	78
Stopped Flow Kinetic Analysis: A Direct Assay for Superoxide Dismutase Activity	79
Design of Manganese-based Superoxide Dismutase Mimics	79
Advantages of Superoxide Dismutase Mimics over Superoxide Dismutase Enzymes	81
Conformational Control of Superoxide Dismutase Activity and Stability	82
Inhibition of Neutrophil-Mediated Human Aortic Endothelial Cell Injury by Superoxide Dismutase Mimics	85
Lipophilicity	85
Inhibition of Myocardial Ischemia-Reperfusion Injury in the Isolated Heart	87
Protection against Myocardial Ischemia-Reperfusion Injury <i>In Vivo</i>	87
Potentiation of Nitric Oxide	88
Anti-Inflammatory Activities of Manganese(II)-based Superoxide Dismutase Mimics	88
3 Summary	90
References	90
Chapter 6 Vanadium Compounds as Possible Insulin Modifiers	93
<i>Chris Orvig, Katherine H. Thompson, Margaret C. Cam and John H. McNeil</i>	
1 Introduction	93
2 Characterization of Vanadium's Insulin-mimetic Effects	95
3 Sites of Action of Vanadium	96
4 Animal Studies and Human Trials	98
5 Toxicological Considerations	100
6 Improved Tissue Uptake with Metal Chelation	101
7 Summary	104
References	104

Chapter 7	Cisplatin-based Anticancer Agents	109
	<i>Lloyd R. Kelland</i>	
1	Introduction	109
2	Clinical Properties	109
	Cisplatin <i>versus</i> Carboplatin	110
	Iproplatin	111
	Determination of Platinum Drug Levels and Pharmacokinetics	112
3	Platinum Chemistry	113
	Mechanism of Action	114
	Structure-specific Damage-Recognition Proteins	115
4	Mechanisms of Resistance to Cisplatin/Carboplatin	116
5	Circumvention of Tumour Resistance to Cisplatin	118
	Development of New Platinum Drugs	118
	Diaminocyclohexane Platinum Complexes	118
	Orally Active Platinum Complexes: JM216	118
	Other Platinum-based Agents	119
	Dose Intensification of Cisplatin/Carboplatin	119
	Combinations with Other Anticancer Agents: Paclitaxel	120
	Modulation of Platinum Resistance Mechanisms	120
6	Summary	120
	References	120
Chapter 8	Dinuclear and Trinuclear Platinum Anticancer Agents	124
	<i>Nicholas Farrell and Silvano Spinelli</i>	
1	Introduction	124
2	Dinuclear and Trinuclear Platinum Complexes as Anticancer Agents	125
3	Biological Activity of Polynuclear Platinum Complexes. Summary and p53 Status of Human Tumors Treatable by BBR3464	126
	Biological Activity and p53 Status	126
	Comparison with Other Clinical Cross-linking Agents	127
4	Structure–Activity Relationships in Polynuclear Platinum Complexes	128
5	DNA Binding of Polynuclear Platinum Complexes	129
	Cooperative Effects in the Solution Structures of Site- specific (Pt,Pt) Interstrand Cross-links	132
6	Summary	133
	References	134

Chapter 9	Oxidation Damage by Bleomycin, Adriamycin and Other Cytotoxic Agents That Require Iron or Copper	135
	<i>David H. Petering, Jun Xiao, Sreedevi Nyayapati, Patricia Fulmer and William E. Antholine</i>	
1	Introduction	135
2	Bleomycin	136
	Clinical Use	136
	Animal and Cellular Studies on the Role of Iron in the Cytotoxicity of Bleomycin	137
	Cellular Properties of DNA Strand Scission	138
	Biochemical Mechanisms of DNA damage	138
	Characterization of DNA Damage by FeBlm	138
	Solution Properties of Metallobleomycins Related to the DNA Damage Reaction	140
	Properties of Metallobleomycins Bound to DNA	143
	Structural Properties of CoBlm Species in Solution and Bound to DNA	144
	Role of the Metal Domain in Site Selectivity	145
3	Adriamycin	146
	Aspects of Clinical Use	148
	Cytotoxic Mechanisms of Reaction of Adriamycin with Iron	149
	Biological Model Reactions of Fe(III)Adr _n	150
4	Redox Active Copper Complexes and the Design of New Drugs	150
	References	153
	Subject Index	158
