	Abbreviations	xxvi
Section A:	Reminiscences of Joseph Chatt Drawn from Conversations and from the Recollections of Co-workers	1
	A Memoir of Joseph Chatt	3
	<i>G. J. Leigh</i>	
	A Memorable Start to a Career	8
	<i>R. G. Wilkins</i>	
	Joseph Chatt and The Frythe: A Memoir of the Early 1950s	11
	<i>G. A. Gamlen</i>	
	Recollections of Life with Joseph Chatt at The Frythe, 1958–62	18
	<i>D. M. Adams</i>	
	Joseph Chatt FRS: Some Memories of his Work at The Akers Research Laboratories of Imperial Chemical Industries Ltd, The Frythe, during the 1950s	25
	<i>L. A. Duncanson</i>	
Section B:	Recent Developments in the Synthesis, Bonding Modes and Reactivity of Hydrido and Dihydrogen Complexes	29
	Hydrides, Hydrogen Bonding and Dihydrogen Activation	31
	<i>R. H. Crabtree</i>	
	1 Introduction	31
	2 Intramolecular Interactions	33
	3 The Nature of A–H···H–E Hydrogen Bonding	35
	4 Intermolecular Interactions	37
	5 Reactivity	38
	6 Intramolecular Effects of Pendant Groups	39
	7 Heterolytic H–H Activation	41
	8 Consequences of H···H Bond Formation	41
	9 Conclusion	42
	10 Acknowledgements	42

11	References and Notes	42
	Hydrides and Dihydrogen Ruthenium Complexes: a Continuation of Joe Chatt's Chemistry	45
	<i>S. Sabo-Etienne and B. Chaudret</i>	
1	Introduction	45
2	Historical Aspects	45
3	Ruthenium Hydride and Dihydrogen Complexes	47
3.1	[RuH ₂ (dppm) ₂] Dihydrogen Bonds and Proton Transfer	48
3.2	[RuH ₂ (H ₂) ₂ (PCy ₃) ₂]	48
3.3	Hydrogen Transfer and Hydrocarbon Activation	49
3.4	16-Electron Hydrido(dihydrogen) Complexes: Reactions of [RuH ₂ (H ₂)(PCy ₃) ₂] with Halocarbons and Related Reactions	49
3.5	18-Electron Hydrido(dihydrogen) Complexes, Proton Transfer and C–H Activation	50
3.6	Silane Complexes and Substitution Reactions of [RuH ₂ (H ₂)(PCy ₃) ₂]	53
4	Conclusion	56
5	Acknowledgements	57
6	References	57
	Hyrido Complexes of Group 6 Transition Metals – Formation of the Pentadentate Ligand with a P–P–Si–P–P Framework	59
	<i>T. Ito</i>	
1	Introduction	59
2	Reactions of [MH ₄ (dppe) ₂] with Primary and Secondary Silanes	60
3	Some Reactions Involving the Trihydro Complex [MoH ₃ {Ph ₂ PCH ₂ CH ₂ P(Ph)C ₆ H ₄ -o}] ₂ (Ar)Si-P,P,P,P,Si}]	63
4	References	65
Section C:	The Chemistry of Phosphines	67
	Some New Insights into the Steric Effects of Tertiary Phosphine Ligands via Data Mining	69
	<i>D. M. P. Mingos</i>	
1	Introduction	69
2	Historical Background	70
3	Discussion	72
4	Acknowledgements	77
5	References	78

Synthesis of New and Unusual Metal Complexes from the Reaction of Dihalogen Adducts of Tertiary Phosphines with Unactivated Metal Powders	79
<i>S. M. Godfrey and C. A. McAuliffe</i>	
1 Introduction	79
2 Background	80
3 Work at The University of Manchester Institute of Science and Technology (UMIST)	80
3.1 Nature of PR_3X_2 (X = Cl, Br or I)	81
3.2 The Activation of Crude Metal Powders by Reagents PR_3X_2	82
4 References	87
NMR Studies of Metal Complexes and Clusters with Carbonyls and Phosphines	89
<i>B. T. Heaton</i>	
1 Introduction	89
2 Metal Carbonyls	90
3 Mechanistic <i>in situ</i> Homogeneous Catalytic Studies on Metal–Phosphine Complexes	95
4 Acknowledgements	99
5 References	99
Section D: Transition Metal Complexes of Olefins, Acetylenes, Arenes and Related Isolobal Ligands	101
Some Notes on the Early Development of Models of Bonding in Olefin–Metal Complexes	103
<i>N. Winterton</i>	
1 Models of the Olefin–Metal Bond	103
2 Addendum	108
3 References	108
The Dewar–Chatt–Duncanson Bonding Model of Transition Metal–Olefin Complexes Examined by Modern Quantum Chemical Methods	111
<i>G. Frenking</i>	
1 Introduction	111
2 Platinum Complexes of Strained Olefins	113
3 Olefin Complexes <i>versus</i> Metallacyclopropane	115
4 Electrostatically-bound Olefin Complexes	119
5 Summary	120
6 Acknowledgements	121

Cycloaddition Reactions with Metalla-1,3-Dipoles	123
<i>H.-W. Frühauf</i>	
1 Introduction	123
2 1,3-Dipolar Cycloaddition of Activated Alkyne to the Fe-N=C Fragment	124
2.1 The Reaction of [Fe(CO) ₃ (dab)] with Dimethyl Acetylenedicarboxylate	124
2.2 The Isolobal Relation of the Fe-N=C Fragment with an Azomethine Ylide	125
3 Adding Variety to the 1,3-Dipolar System	126
3.1 Changing the Metal	126
3.1.1 Reactions of [Ru(CO) ₃ (dab)]	126
3.1.2 [Mn(CO) ₃ (dab)]: A test case for the isolobal relation	127
3.2 Changing the Additional Ligands: Isocyanides for Carbon Monoxide	129
3.2.1 Reactivity of [Fe(CO) ₂ (RNC)(dab)]	129
3.2.2 Reactions of [Fe(RNC) ₃ (dab)] with dmad, olefins and heteroallenes	129
3.3 Changing the Heteroatoms	134
3.3.1 Oxygen instead of nitrogen: α -imino ketones and α -imino esters	134
3.3.2 Sulfur instead of nitrogen: dithiooxamide	136
4 Acknowledgements	137
5 References	138
A Journey in Metal-Ligand Multiple Bond Chemistry	140
<i>V. C. Gibson</i>	
1 Introduction	140
2 The Elusive [M(O)Cl ₂ Cp] Complexes of Niobium and Tantalum	141
3 Half-sandwich Imido Compounds of Niobium and Tantalum	142
4 Exploiting the Isolobal Relationship between Cyclopentadienyl and Imido Ligands	144
5 Alkyl and Alkylidene Complexes of Molybdenum: Routes to Olefin Metathesis Catalysts	147
6 Olefin Polymerisation Catalysts	148
7 Distortional Isomerism	149
8 Acknowledgements	152
9 References	152

Synthesis, Characterisation and Catalytic Activity of Heterobimetal Complexes	154
<i>M. Abou Rida and A. K. Smith</i>	
1 Introduction	154
2 Synthesis of Ruthenium–Rhodium Heterobimetal Complexes	154
3 Hydroformylation of Oct-1-ene	157
4 Conclusion	161
5 References	161
Tethered Arene Complexes of Ruthenium	163
<i>M. A. Bennett and J. R. Harper</i>	
1 Introduction	163
2 Results and Discussion	164
3 Acknowledgements	167
4 References	168
Section E: Chemistry Related to Dinitrogen Complexes	169
Chemistry at the Unit of Nitrogen Fixation	171
<i>R. L. Richards</i>	
1 Introduction: The Early Years and the Search for Dinitrogen Complexes	171
2 The Search for Reactions of Coordinated Dinitrogen	173
3 Production of Ammonia and Search for a Catalytic System	175
4 The Formation of Nitrogen–Carbon Bonds	177
5 Formation of Amines	180
6 Reduction of Alternative Substrates	180
7 Further Developments	182
8 Conclusions	183
9 References	184
Dinitrogen Activation by Early Transition Metal–Amidophosphine Complexes	187
<i>M. D. Fryzuk</i>	
1 Preamble	187
2 Background	187
3 Our First Dinitrogen Complexes	189
4 The Macrocycle	191
5 Trying to Cleave the N–N Bond	194
6 Conclusions	195
7 Acknowledgements	196
8 References	196

Metal–Dinitrogen Chemistry after Chatt	198
<i>C. Floriani</i>	
1 Introduction	198
