

Contents

Chapter 1	Synthetic Materials in Medicine	1
1	Introduction	1
2	Surgical Uses of Biomaterials	3
	Orthopaedic Joint Replacement	4
	Tendons and Ligaments	9
	Cardiovascular Implants	10
	Ophthalmic Implants	12
	Dentistry	15
	Wound Dressings and Artificial Skin	17
	Facial Implants	19
	Breast Implants	20
	Ear Ossicles	20
3	Conclusions	21
4	References	22
Chapter 2	Polymers	25
1	Polyethylene	25
	Calcium Stearate in UHMWPE	26
	Polyethylene for Orthopaedics	27
	Processing of UHMWPE for Use in Orthopaedics	31
	Sterilisation of UHMWPE	33
	Wear of UHMWPE	34
	Clinical and Biological Effects of Wear	36
	Crosslinked UHMWPE	38
	Hydroxyapatite-filled Polyethylene	40
2	Acrylic Bone Cements	41
	Acrylic Bone Cements Containing Other Monomers	44
	Reinforced Bone Cements	45
3	Degradable Polymers	46
	Reinforced Degradable Polymers	48
4	Polyurethanes	49

5	Hydrogels	50
	Hydrogels and Other Polymers in Ophthalmology	51
	Prosthetic Ligaments and Tendons	54
6	Silicone-based Implants	55
7	References	56
 Chapter 3 Ceramics		63
1	Introduction	63
2	Ceramics in Medicine	64
3	Calcium Phosphates	65
	Chemistry	65
	Hydrolysis	67
	Reactions between TCCP and Other Calcium Phosphates	68
	Reactions of Mixtures with Ca:P <1.67	69
	Reactions Forming OCP	69
	Reactions Forming DCPD	70
	Mechanical Properties of Calcium Phosphate Cements	70
	Calcium Phosphates in the Body	71
	Gypsum-containing Calcium Phosphates	71
	Gel-like and DCPD Cements	72
	CDHA and CA Cements	72
	HA Cements	73
	Apatite Chemistry	73
	Polymer-modified Calcium Phosphate Cements	74
	Summary of Calcium Phosphate Cements	76
	Calcium Phosphate Coatings	76
	Spraying Techniques	76
	Wet Techniques	78
	Sputter Techniques	79
	Biological Interactions of Calcium Phosphate Coatings	80
4	Porous Hydroxyapatite Implants	82
5	Dense Hydroxyapatite Implants	84
	Interaction of Dense Hydroxyapatite with the Body	86
6	Bioactive Glasses	86
	The Chemistry of the Bone–Bioactive Glass Interaction	88
	Tissue Response to Bioactive Glasses	91
	Clinical Applications of Bioactive Glasses	91
7	Apatite/Wollastonite Glass-ceramics	92
8	Alumina	95
9	Zirconia	96
10	Pyrolytic Carbon	98
11	References	100

Chapter 4	Metals	107
1	Introduction	107
2	Metal Ions in the Body	110
3	Cobalt–Chromium Alloys	112
	Biocompatibility of Cobalt–Chromium Alloys	113
4	Stainless Steel	115
	Biocompatibility of Stainless Steel	117
5	Titanium and its Alloys	118
	Surface Chemistry of Titanium and its Alloys	120
	Wear Behaviour of Titanium and its Alloys	122
	Surface Modification of Titanium and its Alloys	124
	Biocompatibility of Titanium and its Alloys	125
	Clinical Applications of Titanium and its Alloys	129
	Effect of Titanium Release in the Body	129
	Use of Titanium and its Alloys as Dental Prostheses	131
	Handling of Titanium-based Implant Devices	132
6	Precious Metals and their Alloys	133
7	Dental Amalgam	136
	Dental Amalgams and Health	139
8	References	140
Chapter 5	Dental Materials	148
1	Introduction	148
2	Composite Resins	149
	Curing of Composites	150
	Fillers	152
	Pigments	154
	Bonding of Composite Resins to the Tooth	154
	Clinical Performance of Composite Resins	157
3	Cements	158
	Basic Types and Uses	158
	Cements Based on Zinc Oxide	158
	Zinc Phosphate	158
	Zinc Oxide–Eugenol	159
	Zinc Polycarbonate	159
4	Glass-ionomers	161
	Ion-release from Glass-ionomers Cements	166
	Biocompatibility	169
	Clinical Performance	169
	Resin-modified Glass-ionomers	170
	Adhesion to Dentine and Enamel by	
	Glass-ionomer Cements	172
	Metal-containing Glass-ionomers	174

5	Polyacid-modified Composite Resins	175
6	Aesthetic Dental Restoratives: General Considerations	176
7	Prosthetic Materials	177
8	Endodontic Materials	178
9	Orthodontic Materials	179
10	References	179
Chapter 6 Biological Interactions with Materials		186
1	Introduction	186
2	Biocompatibility	186
3	Toxicity	190
4	Cytotoxicity	191
5	Hypersensitivity	193
6	Carcinogenicity	195
7	Interaction of Materials with Soft Tissues	198
	Inflammation	198
	Granulation Tissue Formation	200
	Foreign Body Reaction	200
	Fibrosis	201
8	Interaction with Blood	201
	Modification of Blood–Biomaterial Interactions by Heparin	207
9	Interactions with Proteins	208
	The Vroman Effect	210
10	Cell Adhesion	212
	Adhesion of Osteoblasts	213
11	Interactions with Hard Tissues	214
	Osseointegration	217
	Fibrous Capsule Formation	218
12	Safety Testing of Biomaterials	218
13	References	221
Chapter 7 Tissue Engineering		227
1	Introduction	227
	Scope of Tissue Engineering	227
2	Tissue Engineering of Skin	228
3	Tissue Engineering of Articular Cartilage	229
4	Tissue Engineering of Bone	230
5	Bibliography	231
6	References	231
Subject Index		234
