Chapter 1	Non-Equilibrium Thermodynamics for Industry	1
	<i>S. Kjelstrup, A. Røsjorde and E. Johannessen</i>	
1	What Can Non-Equilibrium Thermodynamics Offer?	1
2	Developments and Status of NET	2
3	NET Applied to Phase Transitions	2
4	NET Equations for Distillation Columns	5
5	The Second Law Optimal Path of Operation	6
6	Second Law Optimal Distillation Columns	7
7	Second Law Optimal Chemical Reactors	8
8	Conclusions	10
	Acknowledgement	10
	References	10
Chapter 2	A Modelling Technique for Non-equilibrium Metallurgical Processes Applied to the LD Converter	12
	<i>M. Modigell, A. Traebert, P. Monheim and K. Hack</i>	
1	Introduction	12
2	Process Model Development	12
3	Modelling Tool	16
4	Simulation Results	17
5	Conclusions	21
6	List of Symbols	21
	References	22
Chapter 3	Multiphase Thermodynamics of Pulp Suspensions	23
	<i>P. Koukkari, R. Pajarre and E. Räsänen</i>	
1	Introduction	23
2	Fibres in Aqueous Solution	24
3	Fibre-Ion Interactions	25
	3.1 Donnan Equilibrium	25
	3.2 Specific Interactions	26
4	Solid and Gaseous Phases	27

	5	General Gibbs Energy Model	27
	6	Discussion	31
		References	32
Chapter 4		Reactive Distillation	33
		<i>H.G. Schoenmakers and W. Arlt</i>	
	1	Introduction	33
	2	Thermodynamics	34
		2.1 Phase Equilibrium	34
		2.2 Chemical Equilibrium	36
	3	Technical Application of Reactive Distillation	38
		3.1 Introduction	38
		3.2 Process Synthesis	38
		3.3 Process Design and Optimization	39
		3.4 Limitations of the Methods for Synthesis and Design, the Scale-up Problem	39
		3.5 Choice of Equipment	40
	4	Conclusions	41
		References	42
Chapter 5		Thermodynamic Properties from Quantum Chemistry	43
		<i>S.I. Sandler</i>	
	1	Introduction	43
	2	Quantum Mechanical Computation of Force Fields for Molecular Simulation	44
	3	Approximate Quantum Mechanical Calculation of Thermodynamic Properties	53
	4	Conclusions	55
		References	55
Chapter 6		Thermodynamics of Natural Gas Clathrate Hydrates	57
		<i>E.D. Sloan</i>	
	1	Introduction	57
	2	What are Natural Gas Clathrate Hydrates?	58
	3	Development of Hydrate Thermodynamics	59
		3.1 Discovery and Academic Interest	60
		3.2 Thermodynamics Driven by Discovery in Flowlines	60
		3.3 Thermodynamics Driven by Hydrates Outside Flowlines	62
	4	Hydrate Thermodynamics	65
		4.1 The Hydrate Phase Diagram	65
		4.2 The Most Important Advance: The Statistical Thermodynamic Model	67

	5 Hydrate Challenges for the Future: Reversible and Irreversible Thermodynamics	72
	References	72
Chapter 7	Ionic Liquids in Separation Processes	76
	<i>J. Gmehling</i>	
	1 Introduction	76
	2 Thermal Separation Processes Using a Selective Solvent as Separating Agent	77
	2.1 Extractive Distillation	77
	2.2 Liquid–Liquid Extraction	78
	2.3 Absorption	79
	3 Thermodynamic Fundamentals	79
	3.1 Vapor–Liquid Equilibrium (VLE)	79
	3.2 Liquid–Liquid Equilibrium (LLE)	80
	3.3 Gas–Liquid Equilibrium (GLE)	80
	4 Selection of Selective Solvents	80
	5 Thermophysical Properties Required for Selective Solvents	81
	6 Ionic Liquids	82
	7 Results	83
	8 Conclusion	86
	Acknowledgement	87
	References	87
Chapter 8	Spectrocalorimetric Screening for Complex Process Optimization	88
	<i>F. Dan and J.-P.E. Grolier</i>	
	1 Reaction Calorimetry: General Aspects	88
	2 Instrument	89
	3 Particularities of Anionic Polymerization of Lactams in Organic Media	91
	4 Spectro-Calorimetric Investigation Under Isothermal Conditions	92
	4.1 The Manner of Contacting the Catalytic Species	92
	4.2 Effect of the Catalyst Nature	98
	4.3 Stirring Level	100
	5 Non-Isothermal Reaction Calorimetry	101
	6 Conclusion	102
	References	103
Chapter 9	Microcalorimetry for the Pharmaceutical Industry	104
	<i>A.E. Beezer</i>	
	1 Introduction	104
	2 Stability Determinations	105

	3	Characterisation of Physical Form/Amorphous Content	107
	4	Drug/Receptor Studies by Titration Calorimetry (ITC)	108
	5	Multiple Miniature Calorimeters and their Potential	108
	6	Conclusions	109
		References	109
Chapter 10		Isothermal Flow-Microcalorimetry: Principles and Applications for Industry	110
		<i>M.A.A. O'neill</i>	
	1	Introduction	110
	2	Theory	111
	3	Flow Calorimeter Design	111
		3.1 Solution-Phase Flow Calorimeters	112
		3.2 Gaseous-Phase Flow Calorimeters	113
	4	Flow Calorimetric Equations	113
	5	Validation of Flow-Through Microcalorimeters	115
	6	A Simple Flow Calorimetric Experiment	116
		6.1 Experimental Protocol	117
		6.2 Determination of Thermodynamic and Kinetic Parameters from Calorimetric Data	118
	7	Further Applications of Flow Microcalorimetry	119
	8	Conclusions	119
		References	120
Chapter 11		Transport Properties and Industry	122
		<i>W.A. Wakeham and M.J. Assael</i>	
	1	Introduction	122
	2	Measurements	124
		2.1 Viscosity	125
		2.2 Thermal Conductivity	126
		2.3 Diffusion Coefficient	127
	3	Theoretical Predictions	127
	4	International Dimension	129
	5	Databases	129
	6	Future	130
		References	131
Chapter 12		Micro- and Nano-particles Production Using Supercritical Fluids	132
		<i>E. Reverchon and I. De Marco</i>	
	1	Introduction	132
	2	Experimental Apparatus for SAS Processing	133
		2.1 Experimental Procedure	133
	3	SAS Fluidodynamics, Mass Transfer and Thermodynamics	134

4	Relationship between Particles Morphology and High-Pressure VLEs	135
4.1	Experimental Evidences	135
5	System Modifications Induced by the Presence of Solute	140
6	Conclusions	142
	References	142
Chapter 13	Calorimetric Measurements of Thermophysical Properties for Industry	144
	<i>J.-P.E. Grolier and F. Dan</i>	
1	Introduction	144
2	Heat Capacities	145
2.1	Heat Capacities of Gases	145
2.2	Heat Capacities of Liquids	147
3	Bulk Thermomechanical Properties	149
3.1	In Extended Ranges of T and p	149
3.2	In the Vicinity of the Critical Point	151
4	Phase Transition Thermal Properties	152
4.1	Fusion/Crystallization	152
4.2	Glass Transition Temperature	154
5	Conclusion	157
	References	158
Chapter 14	Plastic Recycling	159
	<i>W. Arlt</i>	
1	Introduction	159
2	Cost of Recycling	160
3	Thermodynamic Considerations	160
4	Polymer Production	160
5	Recycling Schemes	162
6	Energetic Considerations	165
	References	165
Chapter 15	Industry Perspective on the Economic Value of Applied Thermodynamics and the Unmet Needs of AspenTech Clients	166
	<i>C-C. Chen, S. Watanasiri, P. Mathias and V.V. De Leeuw</i>	
1	Economic Impact of Applied Thermodynamics	166
2	Applied Thermodynamics System	167
3	Elements of an Applied Thermodynamics System	167
3.1	Calculation Engine	168
3.2	Analysis Tools	169
3.3	Programmable Interfaces	169
3.4	Deployment Tools	169

4	Industrial Applications	170
4.1	Phase Equilibrium Modeling for Nylon-6 Process Simulation	170
4.2	Quickly Screen Solvents for Organic Solids	170
5	Quantitative Cost–Benefit Assessments	171
6	Unmet Needs of AspenTech Clients	172
6.1	Estimation Methods for Pure Compound Properties	172
6.2	Cubic Equations-of-State	173
6.3	Activity Coefficient Models	174
6.4	Modeling Electrolyte Systems	174
6.5	Modeling Polymer Systems	175
6.6	Data Packages	175
6.7	Equilibrium Calculations	176
6.8	Transport and Interfacial Properties	177
6.9	Model Deployment	177
7	Conclusion	177
	References	178
Chapter 16	Thermodynamics of New Materials	180
	<i>M. Schroeder and M. Martin</i>	
1	Introduction	180
2	Ceramic Membranes for Oxygen Separation and Catalytic Partial Oxidation of Hydrocarbons	180
2.1	Transport and Defect Thermodynamics in Membrane Materials	181
2.2	Oxygen Permeation	184
2.3	Stability of Membrane Materials	186
2.4	Conclusion	187
3	Solid Oxide Fuel Cells	187
3.1	Fuel Cells	187
3.2	Electrolytes for Solid Oxide Fuel Cells	189
3.3	Lanthanum Gallates	191
3	Conclusion	193
	References	194
Chapter 17	Thermodynamic Prediction of the Formation and Composition Ranges of Metastable Coating Structures in PVD Processes	197
	<i>P.J. Spencer</i>	
1	Introduction	197
2	(Ti,Al)N Coatings	198
2.1	Metastable → Stable Structural Transformation Energies for Nitride and Carbide Phases	199
3	Al ₂ O ₃ –AlN Coatings	206

<i>Contents</i>		xv
	4 Summary	208
	References	208
Chapter 18	Thermodynamics of the Nano-Sized Particles	209
	<i>T. Tanaka, J. Lee and N. Hirai</i>	
	1 Introduction	209
	2 Gibbs Energy in Small Particle Systems	210
	3 Calculation of Nano-Sized Phase Diagrams of Binary Alloys	213
	4 Concluding Remarks	217
	References	218
Chapter 19	Thermodynamics of Electrolyte Systems of Industry	219
	<i>K. Thomsen</i>	
	1 Standard States and Chemical Potentials	219
	1.1 Ionic Mean Properties	220
	2 Activity Coefficient Models	221
	3 Equilibrium Calculations	222
	3.1 Speciation Equilibrium	222
	3.2 Vapor–Liquid Equilibrium	223
	3.3 Solid–Liquid Equilibrium	223
	3.4 Liquid–Liquid Equilibrium	224
	4 Phase Diagrams	224
	5 Density	226
	6 Viscosity	228
	References	228
Chapter 20	Thermodynamics of Crystallization	230
	<i>A.S. Teja and R.W. Rousseau</i>	
	1 Introduction	230
	2 Pure Component Phase Behavior	230
	3 Binary Solid–Liquid Equilibria	231
	3.1 Systems that Form Solid Solutions	232
	3.2 Systems that Exhibit Eutectic Behavior	233
	4 Ternary Solid–Liquid Equilibria	236
	4.1 Systems that Form Solid Solutions	236
	4.2 Eutectic Systems	238
	5 Solid–Fluid Equilibria	239
	6 Kinetics of Dissolution and Crystal Growth	241
	7 Summary	242
	References	242
Chapter 21	Thermodynamics of Adsorption	243
	<i>A.L. Myers</i>	
	1 Introduction	243
	2 Adsorption Isotherm and Equation of State	244

	3	Thermodynamic Functions	246
	4	Mixtures	248
	5	Example	249
	6	Summary	253
		References	253
Chapter 22		Mesoscopic Non-equilibrium Thermodynamics of Polymer Crystallization	254
		<i>D. Reguera and J.M. Rubí</i>	
	1	Non-Equilibrium Thermodynamics and the Mesoscopic Level of Description	254
	1.1	Meso-Structures	254
	1.2	Mesoscopic Non-Equilibrium Thermodynamics (MNET)	255
	2	Polymer Crystallization	256
	3	The Mesoscopic Non-Equilibrium Thermodynamics Approach to Polymer Crystallization	257
	3.1	Mesoscopic Non-Equilibrium Thermodynamics of Activated Processes	258
	3.2	Polymer Crystallization	259
	4	Conclusions	261
		References	261
Chapter 23		Applied Thermodynamics for Petroleum Fluids in the Refining Industry	262
		<i>D. Ramjugernath and R. Sharma</i>	
	1	Introduction	262
	2	Composition of Petroleum	263
	3	Characterization of Petroleum and its Fractions	263
	3.1	Measured Data	263
	3.2	Calculated Parameters	265
	3.3	Pseudo-Components Characterization	267
	4	Thermo-Physical Property Prediction Methods	267
	4.1	Enthalpy	267
	4.2	P-V-T Relationship	269
	4.3	Vapour–Liquid Equilibria (Including Vapour Pressure)	270
	5	Codes and Data Sources	271
	6	Future Trends	271
		References	272
		Subject Index	274
