

Contents

Chapter 1	Introduction	1
1.1	Historical	1
1.2	The Present Status of Atomic Spectrometric Methods	3
1.3	Terms and Definitions	11
1.3.1	General Terms	12
1.3.2	Terms Concerned with the Analytical Technique and Spectral Radiation	14
Chapter 2	Overview of Atomic Spectrometric Techniques	16
2.1	Theory of Atomic Spectroscopy	16
2.1.1	Atomic Absorption, Emission, and Fluorescence Spectra	16
2.1.2	Emission and Absorption of Energy	21
2.1.3	The Maxwell-Boltzmann Law	25
2.1.4	Spectral Linewidths	27
2.1.4.1	Natural Line Broadening	28
2.1.4.2	Doppler Broadening	29
2.1.4.3	Pressure Broadening	30
2.1.5	The Zeeman Effect	31
2.1.6	The Absorption Coefficient	34
2.1.7	Basic Concepts of the Plasma	36
2.2	Instrument Components	37
2.2.1	Radiation Sources	39
2.2.1.1	Hollow Cathode Lamps	39
2.2.1.2	Electrodeless Discharge Lamps (EDLs)	43
2.2.1.3	Microwave EDLs	43
2.2.1.4	Radiofrequency EDLs	44

	2.2.2	Monochromator	44
	2.2.2.1	Prism and Grating	46
	2.2.3	Detectors	47
2.3	Sample	Introduction in Atomic Spectrometry	52
	2.3.1	Solution Nebulization	53
	2.3.2	Introduction of Gaseous Samples	55
	2.3.2.1	Hydride Generation	55
	2.3.2.2	Cold Vapour Technique	63
	2.3.2.3	Generation of Other Gaseous Species	65
	2.3.3	Flow Injection Analysis	65
	2.3.3.1	FIA-FAAS	66
	2.3.3.2	FIA-Hydride Generation and FIA-Cold Vapour Techniques	66
	2.3.3.3	Amalgamation	67
2.4	Calibration		68
	2.4.1	Calibration Graph Method	68
	2.4.2	Bracketing Method	72
	2.4.3	Standard Addition Method	73
	2.4.4	Internal Standards	73
	2.4.5	Calibration Standards	74
	2.4.5.1	Standard Solutions	74
	2.4.5.2	Non-Aqueous Standards	75
	2.4.6	Precision and Accuracy	76
Chapter 3	Atomic Absorption Spectrometry		78
	3.1	Instrumentation	78
	3.1.1	Basic Features of the Atomic Absorption Spectrometers	78
	3.1.2	The Lambert-Beer Law in Atomic Absorption Spectrometry	78
	3.1.3	Scale Expansion	81
	3.1.4	Single-beam and Double-beam Instruments	82
	3.1.5	Multi-channel Instruments	83
	3.1.6	Modulation of the Signal	84
	3.1.7	Readout Devices	85
	3.1.8	Optimization of Operating Parameters	85
	3.1.9	Automation	87
	3.1.9.1	Sample Preparation	87
	3.1.9.2	Sample Dilution	87
	3.1.9.3	Sample Introduction	87
	3.1.9.4	Multi-element Analysis	88

3.1.10	Fault Finding	88
	3.1.10.1 Flame AAS	88
	3.1.10.2 Electrothermal AAS	89
3.2	Flame Atomization	90
3.2.1	Flames	91
	3.2.1.1 Combustion Flames	91
	3.2.1.2 Diffusion Flame	94
3.2.2	Nebulizer-Burner Systems	94
	3.2.2.1 Pneumatic Nebulizer	95
	3.2.2.2 Spray Chambers	98
	3.2.2.3 Ultrasonic Nebulizer	98
	3.2.2.4 Direct Introduction of Solid Samples	99
	3.2.2.5 Burners	100
3.2.3	Atomization Process in the Flame	101
3.2.4	Interferences in Flame Atomization	104
	3.2.4.1 Chemical Interferences	104
	3.2.4.2 Ionization Interferences	107
	3.2.4.3 Physical Interferences	107
	3.2.4.4 Spectral Interferences	108
3.3	Electrothermal Atomization	109
3.3.1	Graphite Furnace Atomizers	109
	3.3.1.1 Stabilized Temperature Platform Furnace	113
	3.3.1.2 Probe Atomization	117
3.3.2	Open Filament Atomizers	119
3.3.3	Vertical Crucible Furnace Atomizers	120
3.3.4	Graphite Cuvettes	121
	3.3.4.1 Cuvette Material	121
	3.3.4.2 Pyrolytically Coated Graphite Cuvettes	122
	3.3.4.3 Totally Pyrographite Cuvettes	123
	3.3.4.4 Graphite Cuvette Geometries	126
	3.3.4.5 Platform Cuvettes	126
	3.3.4.6 Ridged Cuvettes	128
3.3.5	Atomization Process	128
	3.3.5.1 Drying	131
	3.3.5.2 Thermal Pretreatment	131
	3.3.5.3 Atomization	132
	3.3.5.4 Platform Atomization	137
	3.3.5.5 Probe Atomization	137

3.3.6	Analysis of Solid Samples	139
3.3.7	Matrix Modification	142
3.3.8	Interferences in Graphite Furnace Atomization	147
3.3.8.1	Physical Interferences	147
3.3.8.2	Chemical Interferences	148
3.4	Background Correction	149
3.4.1	Two Line Method	150
3.4.2	Continuum Source Method	150
3.4.2.1	Continuum Radiation Sources	152
3.4.2.2	Faults in Background Correction	152
3.4.3	Smith-Hieftje Method	155
3.4.4	Methods Achieving Zeeman Effect	157
3.4.4.1	Direct Zeeman AAS	157
3.4.4.2	Inverse Zeeman AAS	158
3.5	Special Methods	169
3.5.1	Slotted Tube Atom Trap	169
3.5.2	Hydride Generation Methods	170
3.5.2.1	Atomization of the Hydrides	172
3.5.2.2	Gas-Phase Interferences	173
3.5.3	Cold Vapour Technique	174
3.5.4	Semi-Flame Methods	177
3.5.4.1	Delves Cup	177
3.5.4.2	Sampling Boat	179
3.5.5	Indirect Methods	179
3.5.6	Molecular Absorption Spectrometry with Electrothermal Vaporization (ETV-MAS)	191
Chapter 4 Flame Atomic Emission Spectrometry		200
Chapter 5 Plasma Atomic Emission Spectrometry		202
5.1	Instrumentation for Plasma Atomic Emission Spectrometry	203
5.2	Plasma Sources	203
5.2.1	Inductively Coupled Plasmas	204
5.2.1.1	Types of Inductively Coupled Plasmas	205
5.2.1.2	Radio-Frequency Generators	207
5.2.2	Direct Current Plasmas	208
5.2.3	Microwave Plasmas	211

5.3	Sample Introduction	215
5.3.1	Solutions	215
5.3.1.1	Pneumatic Nebulization	215
5.3.1.2	Ultrasonic Nebulizers	216
5.3.1.3	Grid Nebulizer	217
5.3.1.4	Spray Chambers and Desolvation System	218
5.3.1.5	Nebulizers for Low Sample Volumes	220
5.3.2	Solid Samples	221
5.3.2.1	Direct Insertion of Samples	221
5.3.2.2	Methods that Convert Solid Samples into an Aerosol or Vapour	224
5.3.3	Gaseous Samples	227
5.3.3.1	Hydride Generation Method	227
5.3.3.2	Cold Vapour Method	231
5.4	Spectrometers	231
5.4.1	Spectrometers with the Paschen-Runge Mount	231
5.4.2	Echelle Spectrometers	233
5.4.3	Spectrometers with the Ebert and Czerny-Turner Mounts	241
5.4.4	Spectrometers with the Seya-Namioka Mounts	241
5.4.5	Double Monochromators	241
5.4.6	ICP Atomic Emission Fourier Transform Spectrometers	242
5.5	Interference Effects and Background Correction	244
5.5.1	Nebulization Interferences	245
5.5.2	Chemical Interferences	246
5.5.3	Ionization Interferences	246
5.5.4	Spectral Interferences	246
5.5.4.1	Spectral Line Coincidence	247
5.5.4.2	Overlap with Nearby Broadened Line Wing	248
5.5.4.3	Spectral Continuum and Stray Light	248
5.5.5	Background Correction	251
5.6	Analytical Features of an Argon ICP	253
5.6.1	Emission Lines Employed in ICP-AES	254
5.6.2	Optimization of Instrumental Parameters	255

Chapter 6	Inductively Coupled Plasma Mass Spectrometry	257
6.1	Instrumentation	257
6.2	Sample Introduction	260
6.2.1	Laser Ablation	261
6.2.2	Arc Nebulization	266
6.2.3	Electrothermal Vaporization (ETV)	266
6.3	Interference Effects	267
6.3.1	Signal Enhancement and Suppression	268
6.3.2	Spectral Interferences	269
6.3.2.1	Elimination of Spectral Interferences	270
Chapter 7	Atomic Fluorescence Spectrometry	276
7.1	The Relationship Between Fluorescence and Concentration	277
7.2	Instrumentation for Atomic Fluorescence Spectrometry	278
7.2.1	Radiation Sources	279
7.2.1.1	Hollow Cathode Lamps	279
7.2.1.2	EDLs	279
7.2.1.3	Lasers	280
7.2.1.4	Plasma	280
7.2.1.5	Xenon Arc Lamp	280
7.2.2	Atomizers	281
7.2.2.1	Flames	281
7.2.2.2	Plasma	281
7.2.2.3	Electrothermal Atomizers	282
7.2.2.4	Glow Discharge Chamber	282
7.2.3	Selection of the Wavelength	282
7.2.3.1	Non-dispersive Instruments	282
7.2.3.2	Dispersive Instruments	283
7.3	Interference Effects	283
7.4	Analytical Applications of AFS	284
Chapter 8	Sample Preparation	286
8.1	Sample Collection and Storage	286
8.2	Systematic Errors: Contamination and Adsorption	287
8.3	Sample Preparation Methods	291
8.3.1	Liquid Samples	294
8.3.1.1	Aqueous Solutions	294
8.3.1.2	Non-Aqueous Solutions	295
8.3.1.3	Emulsions	298

8.3.2	Solid Samples	299
8.3.2.1	Dry Ashing	300
8.3.2.2	Wet Digestion	300
8.3.2.3	Digestion in Closed Vessels (Pressure Digestion)	301
8.3.2.4	Fusion	304
8.3.2.5	Slurries	305
8.4	Separation and Preconcentration Methods	305
8.4.1	Liquid-Liquid Extraction	306
8.4.1.1	Extraction Systems	306
8.4.1.2	Standards and Blank Samples	310
8.4.1.3	Back Extraction	311
8.4.2	Ion Exchange	311
8.4.3	Solid Phase Extraction	311
8.4.4	Precipitation	313
8.4.5	Evaporation	313
Chapter 9	Hyphenated Techniques	314
9.1	Atomic Spectrometric Detectors	315
9.2	Separation Methods	317
9.2.1	Gas Chromatography	317
9.2.2	Liquid Chromatography	320
Chapter 10	Advantages and Mutual Comparison of Atomic Spectrometric Methods	324
10.1	Detection Limits	324
10.2	Atomic Absorption	324
10.3	Plasma Atomic Emission	326
10.4	Plasma Mass Spectrometry	328
10.5	Atomic Fluorescence	328
Chapter 11	Further Reading	329
11.1	Books	329
11.2	General Journals, Specialist Journals, Abstracts, and Reviews	330
11.2.1	General journals	330
11.2.2	Specialist Journals	330
11.2.3	Abstracts and Reviews	330
Subject Index		332
