

Contents

Chapter 1 Introduction

1.1	Introduction	1
1.2	Crystal Engineering, Supramolecular Chemistry, Metallosupramolecules	4
1.3	What is a Coordination Polymer?	6
1.4	Synthetic Techniques	10
1.5	Design, Analysis, Application	12
	References	13

Chapter 2 Nets: A Tool for Description and Design

2.1	Introduction	19
2.2	Defining Networks	20
2.3	Identifying and Naming Nets	25
2.4	1D Nets	28
2.5	2D Nets	29
2.6	Common 3D Nets	36
2.6.1	3-Connected Nets	36
2.6.2	4-Connected Nets	39
2.6.3	5-Connected Nets	45
2.6.4	6-Connected Nets	46
2.6.5	Higher Connected Nets	47
2.6.6	Mixed Connectivity Nets	48
2.7	Rod Packings	52
	References	53

Chapter 3 Interpenetration

3.1	Introduction	59
3.2	Nomenclature	67
3.3	1D Interpenetration	69
3.4	2D Interpenetration	70
3.5	3D Interpenetration	77
3.6	Interpenetration of Nets of Different Composition, Topology and Dimensions	84
3.7	Self-penetration	87
3.8	Other Entangled Systems	89
	References	89

Chapter 4 Malleability of Coordination Polymers

4.1	Introduction	96
4.2	Supramolecular Isomerism	98
4.3	Malleability of Building Blocks	107
4.4	Synthetic Approach	111
4.5	Solvent Effects	115
4.6	Other Guests	119
4.7	Counterions	120
4.8	Weaker Interactions	124
4.9	Conclusion	134
	References	134

Chapter 5 Transition Metal Coordination Polymers

5.1	Introduction	144
5.2	Pseudohalide Ligands	146
5.2.1	The Cyanide Ligand	146
5.2.2	The Azide Ligand	149
5.2.3	NCX Ligands (X = O, S, Se)	152
5.2.4	Small Polynitrile Ligands (<i>e.g.</i> dca/tcm)	153
5.3	Larger Nitrile Donor Ligands	156
5.3.1	Neutral Ligands	156
5.3.2	Anionic Nitrile Ligands	158
5.4	Pyridyl Donor Ligands	159
5.4.1	2-Connecting Ligands	159
5.4.2	3-Connecting Ligands	164
5.4.3	4-Connecting Ligands	165
5.5	Five-membered Ring Nitrogen Donor Ligands	166
5.5.1	2-Connecting Ligands	167
5.5.2	3-Connecting Ligands	169
5.5.3	Other Connectors	170

5.6	<i>N</i> -Oxide Ligands	170
5.7	Carboxylate Ligands	172
5.7.1	2-Connecting Ligands	173
5.7.2	3-Connecting Ligands	175
5.7.3	4-Connecting Ligands	177
5.8	Other Ligands	178
5.9	Mixed Donor Atom Ligands	180
5.10	Mixed Ligand Coordination Polymers	181
	References	183

Chapter 6 Rare Earth Coordination Polymers

6.1	Introduction	191
6.2	Cyanide/Nitrile and Pseudohalide Ligands	192
6.3	Five-membered Ring Donors	195
6.4	Pyridyl Donor Ligands	196
6.5	<i>N</i> -Oxide Donors	196
6.6	Rare Earth–Carboxylate Polymers	202
6.6.1	Monocarboxylate Ligands	203
6.6.2	Dicarboxylate Ligands	205
6.6.3	Tricarboxylate Ligands	210
6.6.4	Tetracarboxylate Ligands	212
6.7	Other Ligands	212
6.7.1	Oxalate Coordination Polymers	212
6.7.2	Chloranilic Acid and Dihydroxybenzoquinone	215
6.7.3	Polymers with Sulfonate-containing Ligands	217
6.7.4	Amide Ligands	217
6.7.5	Pyridylcarboxylate Ligands	219
6.8	Mixed 3d/4f Coordination Polymers	221
6.8.1	Cyanide-based Bimetallic Polymers	221
6.8.2	Carboxylate-based Bimetallic Polymers	224
6.8.3	Pyridylcarboxylate Ligands	224
6.8.4	Other Mixed O/N Donor Ligands	229
6.9	Actinide Coordination Polymers	229
	References	231

Chapter 7 Organometallic Networks

7.1	Introduction	238
7.2	Large Aromatic Ligands	239
7.2.1	Cation– π Interactions in Ag(I)–PAH Systems	239
7.2.2	Cation– π Interactions with Cyclophanes	241
7.2.3	Non-aromatic Cation– π Interactions	243
7.3	Organometallic Complexes as Ligands	245
7.3.1	Metallocene Bridging Ligands	245
7.3.2	Metal–Quinone Bridging Complexes	246

7.4	Isocarbonyl Polymers	248
7.5	R ₃ Sn/R ₃ Pb Systems	251
7.5.1	Metal–Cyanide Polymers	251
7.5.2	(Triorganostannyl)tetrazole Polymers	252
	References	254
Chapter 8 Inorganic–Organic Hybrids		
8.1	Introduction	257
8.2	0D Metal–Oxide Substructures	259
8.3	1D Metal–Oxide Substructures	260
8.3.1	2D Polymers with 1D Metal–Oxide Substructures	261
8.3.2	3D Polymers with 1D Metal–Oxide Substructures	263
8.4	2D Metal–Oxide Substructures (Pillared Layers)	264
	References	271
Chapter 9 Magnetism in Coordination Polymers		
9.1	Introduction	273
9.2	Long-range Magnetic Ordering	273
9.2.1	Introduction	273
9.2.2	Molecule-based Magnets	275
9.2.3	Single-chain Magnets	293
9.3	Spin Crossover	295
9.3.1	Introduction	295
9.3.2	Five-membered Heterocyclic Ring Bridging Ligands	297
9.3.3	Six-membered Ring Bridging Ligands	301
9.3.4	Cyanide Bridges in Hofmann Phases	305
	References	307
Chapter 10 Porous Coordination Polymers		
10.1	Introduction	313
10.1.1	Terminology	313
10.2	Designing Permanent Porosity	315
10.2.1	Flexible Porosity	317
10.2.2	Rigid Porosity	322
10.3	Solvent Exchange	326
10.3.1	Flexible Guest Exchange	327
10.3.2	Rigid Guest Exchange	329
10.4	Gas Storage	330
10.4.1	Hydrogen Gas Storage	331
10.4.2	Methane Gas Storage	335

<i>Contents</i>	xiii
10.4.3 Carbon Dioxide Gas Storage	336
10.4.4 Other Gases	337
10.5 Ion Exchange	338
10.6 Multifunctional Porous Materials	338
10.7 Conclusion	340
References	341
Chapter 11 Acentric and Chiral Networks	
11.1 Introduction	345
11.2 Acentric Networks for Non-linear Optical Behaviour	346
11.3 Chiral Networks	352
11.3.1 1D Helices from Achiral Components	352
11.3.2 2D Chiral Nets from Achiral Components	354
11.3.3 3D Chiral Nets from Achiral Components	355
11.3.4 Chiral Ligands	361
11.3.5 Applications	367
References	369
Chapter 12 Reactive Coordination Polymers	
12.1 Introduction	375
12.2 Topotactic Reactions	375
12.3 Chemically Reactive Ligands	386
12.4 Catalysis	386
References	391
Chapter 13 Other Properties of Coordination Polymers	
13.1 Introduction	396
13.2 Luminescence	397
13.3 Redox Activity	399
13.4 Conductivity	401
13.5 Negative Thermal Expansion	404
13.6 Multifunctional Materials	407
References	408
Subject Index	416
