

List of Figures

Figure 1:	Outline chapter structure of this book	3
Figure 2:	Process for a CDS validation from start to go live and linked book chapters	4
Figure 3:	Maintaining the validation and system retirement mapped to the book chapters	5
Figure 4:	Outline chromatograph and CDS	10
Figure 5:	Process workflow for a typical chromatography data system with optional inter-face to a LIMS	10
Figure 6:	A typical chromatogram of an active substance separation from impurities and degradation products	14
Figure 7:	Schematic diagram of a networked chromatography data system	18
Figure 8:	Interpretation of 21 CFR 11 by existing predicate rules	23
Figure 9:	Elements of a computerised system	36
Figure 10:	Complete testing of software is impossible ³⁹	40
Figure 11:	Relationship between equipment qualification, computer system validation and analytical method validation	42
Figure 12:	A system development life cycle (SDLC) of a chromatography data system	44
Figure 13:	Modified V model for system operation and retirement	49
Figure 14:	Interpretation of regulations for computer systems via a validation policy for within an organisation	51
Figure 15:	Decision tree to determine whether to validate a CDS	54
Figure 16:	Balancing the costs of compliance and non-compliance	56
Figure 17:	Decision tree to determine the extent of validation	56
Figure 18:	The Risk Management Process from ISO 14971 ⁴⁴	59
Figure 19:	The current process highlighting the boundaries of the current version of the CDS for case study 1	67
Figure 20:	The redesigned process highlighting the extended boundaries of the new version of the CDS (case study 1)	69
Figure 21:	Existing chromatographic process for case study 2	70
Figure 22:	The existing paper based process for approving results for case study 2	71
Figure 23:	Redesigned chromatographic process with electronic signatures with the CDS	71

Figure 24:	Redesigned electronic review and approval process within the CDS	72
Figure 25:	Using the CDS to aid data review	73
Figure 26:	Electronic signature components for a result consisting of user name, password and the meaning of the signature	74
Figure 27:	Writing well-formed requirements (taken from IEEE Standard 1233)	85
Figure 28:	Outline GANTT diagram for a CDS validation project	91
Figure 29:	The overall process for on-site vendor audits	108
Figure 30:	Diagram of a CDS installation for a laboratory	118
Figure 31:	Outline plan for CDS server installation in a data centre	119
Figure 32:	Plot of prioritised functions <i>versus</i> risk assessment	125
Figure 33:	Differences between equipment qualification and computer system validation terminology (C. Burgess – personal communication)	130
Figure 34:	Differences between installation qualification and operational and performance qualification	131
Figure 35:	Principles of test design	138
Figure 36:	White box and black box testing	140
Figure 37:	System description diagram showing a LIMS interfaced to a CDS	181
Figure 38:	Basic electronic records for a chromatography data system	192
Figure 39:	System architecture and its impact on definition of electronic records	193
Figure 40:	Outline of a change control process	204
Figure 41:	Outline configuration of a networked CDS	206
Figure 42:	Generic process for data migration and system retirement	231
Figure 43:	Overview of the whole mass spectrometry validation, data migration and system retirement project	233
Figure 44:	Regression analysis of Macintosh and Analyst data showing equivalent results obtained from the data migration	241
Figure 45:	Process flow for system retirement	244
Figure 46:	Gap and plan for retrospective validation of a CDS	250
