

# *List of Tables*

Table 1:	Principles of computer validation	37
Table 2:	Misconceptions of computer validation	39
Table 3:	Validation package documentation for a CDS	46
Table 4:	Suggested contents of a user requirements specification for a CDS	80
Table 5:	How system requirements for CDS capacity can be documented	83
Table 6:	Validation plan outline format (based on IEEE Standard 1012 <sup>51</sup> )	88
Table 7:	Example of the responsibilities for one of the roles involved in a CDS validation	92
Table 8:	Selected sections in an Invitation to Tender (ITT) or Request for Proposal (RFP)	98
Table 9:	Example of an invitation to tender document	99
Table 10:	Comparison of a proposal and contract terms from an ISO 9001 certified company	105
Table 11:	Example of a remote vendor audit questionnaire and response	107
Table 12:	Example of an on-site vendor audit question and associated observations	111
Table 13:	Stages in negotiating a contract agreement for a CDS	115
Table 14:	Part of a combined risk and analysis and traceability matrix for a CDS	124
Table 15:	Differences in qualification terminology between equipment qualification and computerised system validation	129
Table 16:	Outline of a test plan (based on IEEE standard 829 <sup>65</sup> )	142
Table 17:	Linking requirements to testing in a PQ test plan	143
Table 18:	Outline of a test script (adapted from IEEE standard 829 <sup>65</sup> )	145
Table 19:	Continuum of user privileges	150
Table 20:	Defining user privileges for each user type	151
Table 21:	Test script execution instructions written for a new user of an application	154
Table 22:	Test script execution instructions written for an experienced user of an application	155
Table 23:	Test script execution instructions with an associated test log	156
Table 24:	Contents of a typical service level agreement	169
Table 25:	Contents of a CDS system description	179

Table 26: Contents of the validation summary report – adapted from IEEE Standard 1012 <sup>51</sup>	184
Table 27: Summary of PQ testing in the validation summary report	185
Table 28: Change control requirements from PIC/S guidance	200
Table 29: Data processing options available in the Macintosh MS systems	234
Table 30: Comparison peak areas from Masschrom with the same data converted and calculated by Analyst	240
Table 31: Calibration curve parameters calculated by Masschrom and Analyst	241
Table 32: Some items for safety from an LC–MS system retirement checklist	247
