

Table of Contents

Glossary	xiii
Chapter 1 Introduction	1
1.1 Importance of Anions in the Modern World	1
1.2 The Challenges of Anion Complexation	2
1.3 Anions in Biological Systems	4
1.4 Historical Overview of Synthetic Anion Receptor Chemistry	12
1.5 Measurement Methods: Caveats and Limitations	21
1.6 Summary Remarks	22
References	22
Chapter 2 Classic Charged Non-Metallic Systems	27
2.1 Polyammoniums	27
2.1.1 Acyclic Systems	27
2.1.2 Monocyclic Systems	33
2.1.3 Bicyclic Systems	48
2.1.4 Polycyclic Systems	59
2.2 Quaternary Ammoniums	60
2.2.1 Linear Systems	60
2.2.2 Monocyclic Systems	66
2.2.3 Polycyclic Systems	71
2.3 Guanidiniums	77
2.4 Amidiniums	88
2.5 Imidazoliums	103
2.5.1 Acyclic Systems	103
2.5.2 Cyclic Systems	108
2.6 Thiouronium	112
2.7 Summary Remarks	117
References	118

Chapter 3	Protonated Expanded Porphyrins and Linear Analogues	131
3.1	Introduction	131
3.2	Cyclic Systems	132
3.2.1	Tetrapyrrolic Systems	132
3.2.2	Pentapyrrolic Systems	136
3.2.3	Hexapyrrolic Systems	150
3.2.4	Oligopyrrolic Systems	154
3.2.5	Imine Linked Receptors and Other Related Systems	157
3.3	Linear Receptors	161
3.4	Summary Remarks	166
	References	166
Chapter 4	Neutral Non-Metallic Systems	171
4.1	Amide-Based Anion Receptors	171
4.1.1	Acyclic Systems	171
4.1.2	Cyclic Systems	177
4.1.3	Calixarene and Steroid-Based Systems	183
4.2	Peptide-Based Receptors	186
4.3	Urea-Based Anion Receptors	193
4.3.1	Acyclic Systems	193
4.3.2	Cyclic Systems	200
4.3.3	Receptors Based on Calixarene and Steroid Backbones	202
4.4	Alcohol-Based Anion Receptors	205
4.5	Hybrid Receptors	210
4.5.1	Amide-Urea Systems	210
4.5.2	Urea-Alcohol Systems	213
4.5.3	Alcohol-Amide Systems	214
4.5.4	Amide-Hydroxy-Urea Systems	216
4.6	Other Systems	217
4.7	Summary Remarks	220
	References	220
Chapter 5	Neutral Pyrrole Systems	227
5.1	Introduction	227
5.2	Cyclic Receptors	227
5.2.1	Extended Cavity Systems	232

5.2.2	Higher Order Systems	234
5.2.3	Strapped Systems and other Related Receptors	244
5.3	Linear Receptors	251
5.4	Summary Remarks	256
	References	256
Chapter 6	Receptors for Ion-Pairs	259
6.1	Introduction	259
6.2	Ditopic Receptors	261
6.3	Cascade Complexes	278
6.4	Receptors for Zwitterions	283
6.5	Dual-Host Extraction of Salts	287
6.6	Summary Remarks	290
	References	290
Chapter 7	Metal and Lewis Acid-Based Receptors	294
7.1	Lewis Acidic Receptors	294
7.2	Metals as Organizers	307
7.3	Other Anion Receptors Containing Metals	315
7.4	Summary Remarks	316
	References	316
Chapter 8	Sensors	320
8.1	Introduction	320
8.2	Devices that Employ Anion-Selective Membranes	320
8.3	Discrete Molecular Electrochemical-Anion Sensors	327
8.4	Discrete Molecular Optical Anion Sensors	339
8.5	Displacement Assays	356
8.6	Assays Based on Deaggregation Phenomena	360
8.7	Summary Remarks	361
	References	363
Chapter 9	Anion-Controlled Assembly and Template-Based Synthesis	370
9.1	Introduction	370
9.2	Halide-Controlled Assemblies	370
9.3	Oxyanion-Directed Assemblies	383

9.4	Polyfluoro-Anion Directed Assemblies	392
9.5	Summary Remarks	399
	References	399
Chapter 10	Afterword	402
	Subject Index	404
