## Part I: The Nanotechnologist's Toolbox

<b>Chapter 1</b>	<b>How Can You 'See', 'Feel' or 'Hear' Something so Incredibly Tiny?</b>	<b>3</b>
1.1	Getting all Touchy-Feely	4
1.2	Feeling our Way Through the Nanoworld	8
1.3	Real-time Single-molecule Imaging of an Entire Chemical Reaction	11
1.4	Sucking Spaghetti Through Nanopores	13
1.5	Nanoprobes and Biosensors	15
1.6	Nanomechanical Holography can Reveal Nanoparticles inside Intact Cells	17
1.7	Direct Imaging Technology Reaches the Nanoscale	19
1.8	My corona! Novel Spectroscopic Technique could Revolutionize Chemical Analysis	21
1.9	Listening to the Music of Molecules	22
1.10	Nano-scales Weigh Atoms with Carbon Nanotubes	25
<b>Chapter 2</b>	<b>Building Nanostructures—from the Top Down and from the Bottom Up</b>	<b>28</b>
2.1	Applying a 250 Year Old Discovery to Nanofabrication	30
2.2	Single Atom Manipulation on a 3-D Surface	32
2.3	Native Protein Nanolithography that can Write, Read, and Erase	33

Published by the Royal Society of Chemistry, [www.rsc.org](http://www.rsc.org)

2.4	Playing Rubik's Cube with Nanoparticles	35
2.5	Nanofabrication Based on Inorganic Replicas of Complex Biotemplates	38
2.6	Viruses as Building Blocks for Engineers	40
2.7	Nanoassembly with Living Materials	42
<b>Chapter 3</b>	<b>Techniques and Concepts for the Nanotechnologist</b>	<b>45</b>
3.1	How to Build a Nanothermometer	46
3.2	Nanotechnology Reinvents the Wheel	48
3.3	Bronze Age Technique Works Just Fine in the 21st Century	51
3.4	Metal Forging—from Blacksmith to Nanoscientist	52
3.5	Spooky Technology	54
3.6	Shedding Light on the Nanoworld	56
3.7	Nanoantennas Lighting up Molecules	58
3.8	Cut and Paste with Single Molecules	60
3.9	Blowing Bubbles—from Clingfilm to Nanoelectronics	62
3.10	Sliding Away in the Nanoworld	64
<b>Chapter 4</b>	<b>Learning from Mother Nature</b>	<b>68</b>
4.1	Copying the Greatest Nanotechnologist of All	69
4.2	Biophysics in Reverse	71
4.3	For Super-strong Dry Adhesives Look No Further than the Gecko	73
4.4	Nature's Bottom-up Nanofabrication of Armor	74
4.5	Peacock Feathers and Butterfly Wings Inspire Biotemplated Nanomaterials	76
4.6	Modeling Molecular Force Generation in Cells	78
4.7	Nanoscale Water Pump Imitating Cell Pores	80
4.8	Living Transistors with Nanofluidic Diodes	82
4.9	Moth Eyes Inspire Self-cleaning Antireflection Coatings	85
4.10	Protein Engineering—from the Humble Spider to Next-generation Materials	87
<b>Chapter 5</b>	<b>Amazing New Materials</b>	<b>90</b>
5.1	Quantum Dots are Ready for Real-world Applications	91
5.2	Researchers go Ballistic over Graphene	93
5.3	'Cool' Graphene Might be Ideal for Thermal Management in Nanoelectronics	95
5.4	Self-Cleaning Stickies	97
5.5	Smart Nanofibers at the Flip of a Light Switch	99

5.6	Designer Protein-based Smart Materials for Nanomechanical Applications	101
5.7	Nanotechnology that will Rock You	103
5.8	Drill, Baby, Drill	105
5.9	‘Nailing’ Superlyophobic Surfaces	107
<b>Chapter 6</b>	<b>Tiny Steps Towards Tiny Machines</b>	<b>110</b>
6.1	Nanopiezotronics—a Pathway to Self-powering Nanodevices	111
6.2	Nanoelectromechanical Systems Start to Take Shape	113
6.3	The Promise of Industrial-scale Nanofabrication Techniques	115
6.4	Swimming Microrobots Propelled by Bacteria	117
6.5	On the Way to Building Nanomachinery	120
6.6	A Gripping Tale of Nanomanufacturing	123
6.7	Playing Nano-pinball in the Atomic Café	125
6.8	Plastic Motors Driven by Light Alone	126
6.9	Nanotechnology Gets a Grip	128
 <b>Part II: Nanomedicine—Death of the Slasher</b>		
<b>Chapter 7</b>	<b>The Radically Different Medicine of the Future</b>	<b>135</b>
7.1	Nanotechnology’s Medical Applications	135
7.2	Mathematical Engines of Nanomedicine	138
7.3	How Medicine can Learn from Materials Science	140
7.4	Next-Generation Tissue and Cell Engineering	142
7.5	Improving the Tools for Single-Cell Nanosurgery	144
7.6	Microbotics—Nanoparticles Hitching a Ride on Bacteria	145
7.7	The Modest Pipette Becomes a Nanosurgery Tool	147
<b>Chapter 8</b>	<b>Improved Diagnostics—Key to Effective Prevention</b>	<b>150</b>
8.1	Nanostoves for Superfast Blood Analysis and Detection of DNA Defects	151
8.2	Electronic Noses that ‘Smell’ Cancer	153
8.3	A Biosensor for <i>Salmonella</i> Detection	155
<b>Chapter 9</b>	<b>The Fight Against Cancer</b>	<b>158</b>
9.1	Carbon Nanotubes as Effective Cancer Killers	158
9.2	Boosting Cancer Drug Efficacy by Targeting Specific Sites Inside Tumor Cells	160

9.3	Inhaling Bubbles to Fight Lung Cancer	163
9.4	Nanoparticle Photodynamic Therapy for Deep Cancer Treatment	165
9.5	Highly Effective Radiofrequency Absorbers for Cancer Therapy	167
9.6	Cancer Treatment with Diamonds	170
<b>Chapter 10</b>	<b>Next-Generation Implants, Prostheses, and other Cures</b>	<b>173</b>
10.1	Improved Implant Devices	173
10.2	Diamond Ice Coatings could Improve Knee Prostheses and Solar Cells	175
10.3	Break a Bone—and Fix it with Carbon Nanotubes	177
10.4	Nanoparticles make Better Eye Drops	179
10.5	Contributing to the Fight against Alzheimer's	181
10.6	Nanotechnology-based Stem Cell Therapies for Damaged Heart Muscles	183
<b>Chapter 11</b>	<b>Concepts a Bit Further Out</b>	<b>186</b>
11.1	Cell-like Nanofactories Inside the Body	186
11.2	Nanoscale Power Plants	188
11.3	Nanotechnology Coming to a Brain Near you	190
11.4	Plugging into the Brain with Carbon Nanofibers	192
<b>Part III: Simply Green—Environmental Applications and Risk Management</b>		
<b>Chapter 12</b>	<b>Green Nanotechnology</b>	<b>197</b>
12.1	Flame Retardants with less Toxic Chemicals	198
12.2	Turning Diesel Soot into Carbon Nanotubes	200
12.3	Nanocatalyst Improves Important Reaction in the Chemical Industry	202
12.4	Golden Nanoparticles + Sunlight=Greener Chemistry	204
<b>Chapter 13</b>	<b>Dealing with Pollution</b>	<b>206</b>
13.1	Novel Nanocomposite Material to Combat White Pollution	206
13.2	Capturing and Storing Greenhouse Gases	207
13.3	Novel Material Addresses Water Pollution and Oil Spills	210

<i>Contents</i>	xiii
13.4 From Waste to Power in One Step	212
13.5 Nanotechnology and Water Treatment	214
13.6 Removing Heavy Metals from Water	216
13.7 A Solution for Radioactive Waste Cleanup	218
13.8 Self-healing Anticorrosion Coatings as an Alternative to Toxic Chromium	220
<b>Chapter 14 Energy—Renewable and Clean</b>	<b>223</b>
14.1 Catching a Rainbow—Quantum Dots Brighten the Prospects for Solar Energy	223
14.2 Improving Lithium Ion Battery Performance	226
14.3 Building Better Fuel Cells	228
14.4 Nanotechnology is Key to Improving Fuel Cell Performance	230
14.5 High-performance, Flexible Hydrogen Sensors	232
<b>Chapter 15 Nanotoxicology—Assessing the Risks</b>	<b>235</b>
15.1 Risk Assessment could Benefit from Nanoparticle Categorization Framework	236
15.2 Comparing Apples with Oranges—the Problem of Nanotube Risk Assessment	239
15.3 Biodegradation of Carbon Nanotubes could Mitigate Potential Toxic Effects	242
15.4 Nanoparticle Penetration of Human Skin—a Double-Edged Sword	244
15.5 Nanotechnology’s Complicated Risk–Benefit Dichotomy	245
15.6 Toxic Nanotechnology—a Problem that Could Result in Surprising Benefits	248
15.7 Analyzing Biocompatibility of Nanomedical Applications with Blood	250
<b>Part IV: A World of Novel Applications Awaits</b>	
<b>Chapter 16 Designing Tomorrow’s Computer</b>	<b>255</b>
16.1 Carbon Nanotubes could Buy more Time for Moore’s Law	255
16.2 A Race to the Bottom	258
16.3 To the Rescue of Overheating Computer Chips	260
16.4 Telescoping Nanotubes Promise Ultrafast Computer Memory	262

16.5	Next-generation Computer Memory made of Graphene	264
<b>Chapter 17</b>	<b>Electronics Beyond Silicon</b>	<b>266</b>
17.1	Textile Transistors to Create Truly Wearable Electronics	266
17.2	Gutenberg + Nanotechnology = Printable Electronics	268
17.3	Transparent and Flexible Electronics with Nanowire Transistors	270
17.4	Using Quantum Mechanics to Turn Molecules into Transistors	272
17.5	DNA Electronics	275
<b>Chapter 18</b>	<b>From Supermarket Shelf to Spacecraft</b>	<b>277</b>
18.1	Nanocomposite Coatings for Superior Dry Self-lubrication	277
18.2	Concrete Nanotechnology	279
18.3	Intelligent Inks—now you see them, now you don't	281
18.4	Radiation Shielding for Spacecraft	283
18.5	NASA Research into Shape-Shifting Airplanes	285
18.6	Portable, Cheap, and Fast Explosives Detector Built with Nanomaterials	287
18.7	Nano-barcodes to Quickly Identify Biological Weapons	288
18.8	Bullets Bouncing Harmlessly off T-shirts	290
	<b>Subject Index</b>	<b>293</b>
