Chapter 1 Catalysis in Non-conventional Reaction Media

Marco Lombardo and Claudio Trombini

1.1	Introduction	1
1.1.1	The Context	1
1.1.2	The 12 Principles of Green Chemistry	2
1.1.3	Catalysis	3
1.1.4	Green Solvents	6
1.2	Organocatalysis in Green Solvents	8
1.2.1	Asymmetric Cross Aldol Reactions	8
1.2.2	Asymmetric Mannich Reactions	15
1.2.3	Asymmetric Michael Reactions	17
1.2.4	Organocatalytic Baylis–Hillman Reaction in Non-conventional Solvents	22
1.3	Transition Metal Catalysed Reactions in Green Solvents	25
1.3.1	Hydroformylation and Carbonylation Reactions in Aqueous Biphasic Systems	26
1.3.2	Hydroformylation and Carbonylation Reactions in Ionic Liquids	33
1.3.3	Hydroformylation Reactions in $scCO_2$ and in Ionic Liquids/ $scCO_2$ Systems	38
1.3.4	Hydroformylation and Carbonylation Reactions Promoted by SILP Catalysts	41
1.4	Olefin Metathesis Reactions	44
1.4.1	Olefin Metathesis in Aqueous Media	47
1.4.2	Olefin Metathesis in Ionic Liquids	54
1.5	Palladium-catalysed Cross Coupling Reactions in Non-conventional Solvents	57

RSC Green Chemistry Book Series

Eco-Friendly Synthesis of Fine Chemicals

Edited by Roberto Ballini

© Royal Society of Chemistry 2009

Published by the Royal Society of Chemistry, www.rsc.org

1.6	Concluding Remarks	67
	Glossary	68
	References	69
Chapter 2	The Contribution of Photochemistry to Green Chemistry	
	<i>Stefano Protti, Simone Manzini, Maurizio Fagnoni and Angelo Albini</i>	
2.1	Introduction	80
2.1.1	Photochemistry and Green Chemistry	80
2.2	Examples of Green Photochemical Reactions: Formation of a Carbon–Carbon Bond	84
2.2.1	Formation of C–C Bonds <i>via</i> Coupling Reactions	85
2.2.2	Photoinduced Alkylation of Alkenes and Alkynes by Alkanes, Alcohols and Alkyl Halides	86
2.2.3	Acylation Reactions	89
2.2.4	Aryl–Aryl and Aryl–Alkyl Bond Formation	90
2.2.5	Cyclization <i>via</i> Atom and Energy Transfer	93
2.2.6	Electrocyclic Reactions	95
2.2.7	Di- π -methane and Oxa-di- π -methane Rearrangements	96
2.2.8	Cycloaddition Reactions	96
2.3	Formation of a Carbon–Heteroatom Bond	100
2.3.1	Oxygenations	100
2.3.2	Brominations	102
2.3.3	Synthesis of Heterocycles	102
2.4	Oxidation and Reduction	104
2.4.1	Oxidation Reactions	104
2.4.2	Oxidative Cleavages	105
2.4.3	Reductions	106
2.5	Conclusions and Outlook	107
	References	108
Chapter 3	Supported Organic Bases: A Green Tool for Carbon–Carbon Bond Formation	
	<i>Giovanni Sartori, Raimondo Maggi, Chiara Oro and Laura Soldi</i>	
3.1	Introduction	112
3.2	Monofunctional Catalysts	113
3.2.1	Aldol Reactions	114

3.2.2	Michael Reactions	121
3.2.3	Knoevenagel Reactions	126
3.2.4	Other Reactions	133
3.3	Polyfunctional Catalysts	138
3.3.1	Aldol Reactions	138
3.3.2	Michael Reactions	144
3.4	Conclusions	151
	References	152

Chapter 4 Task-specific Ionic Liquids for Fine Chemicals

Cinzia Chiappe

4.1	Introduction	155
4.2	Task-specific Ionic Liquids (TSILs) in Batch Processing	158
4.2.1	TSILs in Acid- and Base-catalyzed Reactions	158
4.2.2	TSILs in Metal-catalyzed Reactions	162
4.2.3	TSILs in Supported Synthesis	165
4.2.4	Chiral ILs	170
4.3	Task-specific Ionic Liquids in Continuous Processing	171
4.3.1	Catalyst Immobilization	172
4.3.2	Microreactor Technology	178
4.4	Ionic Liquids in Biocatalysis for Fine Chemicals	179
4.5	Conclusions	180
	References	180

Chapter 5 Green Procedures for the Synthesis of Useful Molecules Avoiding Hazardous Solvents and Toxic Catalysts

Brindaban C. Ranu and Kalicharan Chattopadhyay

5.1	Introduction	186
5.2	Reaction in Aqueous Medium	187
5.2.1	Indium-mediated Reactions	187
5.2.2	Aldol Reaction	187
5.2.3	Diels–Alder Reaction	188
5.2.4	Radical Reactions	189
5.2.5	Oxidation Reactions	191
5.2.6	Claisen Rearrangement	192
5.2.7	Aza-Michael Reaction	192
5.2.8	Thia-Michael Addition	193
5.2.9	Iodination	194
5.2.10	Mannich Reaction	194

5.2.11	Cyclization Reactions	194
5.2.12	Solvent Controlled Mono- and Bis-allylation of Active Methylene Compounds	196
5.2.13	Pauson–Khand Reaction	196
5.2.14	Heck Reaction	196
5.2.15	Beckmann Rearrangement	197
5.2.16	Synthesis of 1,3-En-yne Derivatives	197
5.2.17	Hiyama Coupling	197
5.2.18	Synthesis of Benzo[<i>b</i>]furan	198
5.3	Surface-mediated Reaction	198
5.3.1	Reaction on an Al ₂ O ₃ Surface	199
5.3.2	Reaction on a SiO ₂ Surface	202
5.3.3	Reaction on the Surface of a Clay	203
5.3.4	Reaction on the Surface of a Zeolite	204
5.4	Neat Reactions	206
5.4.1	Reaction with Catalyst	206
5.4.2	Reaction without Catalyst	208
5.5	Ionic Liquids	211
5.5.1	Synthesis of Organocarbonates	211
5.5.2	Synthesis of 1,3-Dithianes	212
5.5.3	Knoevenagel Condensation	213
5.5.4	Synthesis of Conjugated Dienes	213
5.5.5	Synthesis of Dithiocarbamates	214
5.5.6	Synthesis of Highly Substituted Pyridines	214
	References	215

Chapter 6 Simple Reactions for the Synthesis of Complex Molecules

Janet L. Scott and Christopher R. Strauss

6.1	Introduction	220
6.2	A New Platform for Phenol/Formaldehyde Based Chemicals and Materials	220
6.2.1	Phenol/Formaldehyde Products	220
6.2.2	Building Block Approach	222
6.2.3	Benzaldehyde-Cyclohexanone Chemistry as a Basis	223
6.2.4	Strategy and Building Blocks	224
6.2.5	Macrocyclic Dienone [1 + 1] Products	227
6.2.6	Macrocyclic Dienone [2 + 2] Products	228
6.2.7	Trapezoidal Dienone Macrocycles	228
6.2.8	Horning-crown Macrocycles	229

6.2.9 Rod-like Molecules and Phenol/ Formaldehyde Oligomers	231
6.3 A New Cascade Reaction for Aniline Derivatives	231
6.4 Properties of Some of the Above Products	233
6.5 Conclusion	234
References	235

Chapter 7 High Pressure: a Clean Activation Method for Sustainable Organic Synthesis

Lucio Minuti

7.1 Introduction	237
7.2 Cycloadditions	238
7.2.1 Diels–Alder Reaction	238
7.2.2 [3 + 2] Cycloaddition	248
7.3 Nucleophilic Substitutions	251
7.3.1 Aliphatic Nucleophilic Substitutions	251
7.3.2 Aromatic Nucleophilic Substitution (S _N Ar)	255
7.4 Condensation Reactions	260
7.5 Miscellaneous Reactions	266
References	270

Chapter 8 Environmentally Benign Chemical Synthesis via Mechanochemical Mixing and Microwave Irradiation

Vivek Polshettiwar and Rajender S. Varma

8.1 Introduction	275
8.2 Environmentally Benign Synthesis <i>via</i> Mechanochemical Mixing	276
8.2.1 Mechanically Induced Organic Transformations in a Ball-mill	276
8.2.2 Mechanically Induced Fullerene and Carbon-nanotube Synthesis in a Ball-mill	278
8.3 Environmentally Benign Synthesis <i>via</i> Microwave (MW) Irradiation	280
8.3.1 MW-assisted Synthesis of Heterocycles	281
8.3.2 MW-assisted Synthesis of Ionic Liquids (ILs)	285
8.3.3 MW-assisted Oxidation–Reduction Reactions	286
8.3.4 MW-assisted Nucleophilic Substitution Reactions	287

8.3.5	MW-assisted Suzuki and Heck Reactions using supported Pd-catalyst	288
8.3.6	MW-assisted aza-Michael and Ritter Reaction	288
8.4	Conclusions	290
	Acknowledgment	291
	References	291
	Subject Index	293
