Chapter 1	Structure of Active Sites of Cu-ZnO Catalysts and Selective Formation of Relevant Precursors	1
	<i>By Toshio Matsuhisa</i>	
1	Introduction	1
2	Nature of Active Sites	2
	2.1 Structure of Active Sites	2
	2.2 The Role of ZnO	3
	2.3 Relation Between Oxygen Coverage and Activity of Methanol Synthesis	4
3	Selective Formation of Precursors and Their Structures	6
	3.1 Addition Rates and Obtained Precursors	7
	3.2 Effect of Concentration of NaHCO ₃ Solution on the Distribution of Precursors	8
	3.3 Nature of Initial Intermediates and Precursors	8
	3.4 Mechanism of Precursor Formation	10
4	Prospect for the Improvement of Methanol Synthesis Catalysts	12
	4.1 Increasing Activity by Achieving Highly Dispersed Copper	13
	4.2 Effect of Support on Cu Surface Area and Methanol Synthesis Activity	15
5	Summary	18
	Acknowledgment	19
	References	20
Chapter 2	Property and Catalysis of Aluminophosphate-based Molecular Sieves	21
	<i>By Tatsumi Ishihara and Yusaku Takita</i>	
1	Introduction	21
2	Crystallite Structure of AlPO-n	22

3	Metal-aluminophosphate (MeAPO-n) and Silico-aluminophosphate (SAPO)	24
3.1	Isomorphous Substitution of AlPO with Metal Cations	24
3.2	Solid Acidity of SAPO-n and MeAPO-n	28
3.3	Ion-Exchange Sites in AlPO-n-Based Molecular Sieves	32
4	Catalysis of AlPO-n, MeAPO-n, or SAPO-n as a Solid Acid	33
5	Aluminophosphate-based Molecular Sieves as a Thermostable Catalyst	36
5.1	Thermal Stability of Aluminophosphate-based Molecular Sieves	37
5.2	Application of Aluminophosphate-based Molecular Sieves for a Thermostable Catalyst	39
5.2.1	Thermostable NO Reduction Catalyst with Hydrocarbon	40
5.2.2	Application of SAPO-5 Ion-Exchanged with Pd for Combustion Catalyst	44
6	Conclusion	49
	References	49
Chapter 3	Fischer-Tropsch Synthesis. Mechanism Studies Using Isotopes	52
	<i>By Ajoy Raje and Burtron H. Davis</i>	
1	Introduction	52
2	Is Bulk Carbide an Intermediate?	53
3	Heterogeneity of the Catalyst Surface	55
4	Irreversibility of the Chain Growth Process	56
5	Studies with Labelled Molecules	60
5.1	Dissociation of CO	60
5.2	Iron Catalysts	61
5.3	Synthesis with Co Catalysts	86
5.4	Ruthenium Catalysts	98
5.5	Other Metals	101
6	Kinetic Isotope Effect	102
7	Water-Gas Shift	109

8	Isotope Transient Kinetic Studies	115
8.1	Nature of Adsorbed Species	117
8.2	Transient Isotopic Kinetic Studies of Methanation	119
8.3	Isotopic Transient Kinetic Studies of the FTS	121
	Acknowledgment	127
	References	127
Chapter 4	Catalyst Materials for High-temperature Combustion	132
	<i>By Koichi Eguchi</i>	
1	Introduction	132
2	Reaction Characteristics for Catalytic Combustion	133
3	Catalyst Materials for High-temperature Combustion	135
3.1	Structure of Honeycomb Catalysts	135
3.2	Thermal Stability of Catalysts	136
3.3	Thermal Shock Resistance	138
4	Analysis of Sintering Behavior of Hexaaluminate	139
5	The Active Component for Combustion Reaction	141
6	Activity of Pd Catalyst for Methane Combustion	145
7	Application of Catalytic Combustion to Gas Turbines	147
8	Conclusion	150
	Acknowledgment	150
	References	150
Chapter 5	Vapor Phase Condensation Reactions Using Formaldehyde or Methanol	152
	<i>By M. Ai</i>	
1	Introduction	152
2	Acid-Base Properties of Metal Oxides	152

3	Reaction of HCHO with Carboxylic Acids	154
3.1	Catalysts	154
3.2	Reaction of HCHO with Acetic Acid	154
3.2.1	Reaction over Base Catalysts	154
3.2.2	Reaction over Acid Catalysts	156
3.3	Reaction of HCHO with Propionic Acid	159
3.3.1	Reaction over Base Catalysts	161
3.3.2	Reaction over Acid Catalysts	161
4	Reaction of HCHO with Alkyl Esters of Carboxylic Acids	163
4.1	Catalysts	164
4.2	Reaction of HCHO with Methyl Acetate	164
4.2.1	Reaction over Base Catalysts	164
4.2.2	Reaction over Acid Catalysts	164
4.3	Reaction of HCHO with Methyl Propionate	166
4.3.1	Reaction over Base Catalysts	166
4.3.2	Reaction over Acid Catalysts	169
5	Reaction of Methanol with Acids or Esters	171
5.1	Reaction in the Presence of Oxygen	171
5.1.1	Reaction of Methyl Acetate	171
5.1.2	Reaction with Methyl Propionate	175
5.2	Reaction of Methanol in the Absence of Oxygen	175
6	Reaction with Nitriles	178
6.1	Reaction of HCHO with Nitriles	178
6.2	Reaction of Methanol with Nitriles	179
7	Reaction with Carbonyl Compounds	181
7.1	Reaction of HCHO with Aldehydes	181
7.2	Reaction of HCHO with Ketones	187
7.3	Reaction of Methanol with Carbonyl Compounds	189
8	Reaction of HCHO with Alcohols	190
9	Other Related Reactions	193
10	Conclusion	193
	References	196

Chapter 6	Electrochemical Activation of Catalysis: In Situ Controlled Promotion of Catalyst Surfaces	199
	<i>By Constantinos G. Vayenas and Stylianos G. Neophytides</i>	
1	Introduction	199
2	Solid-state Electrochemistry	200
	2.1 Solid Electrolytes	200
	2.2 Solid Electrolyte Potentiometry (SEP)	201
	2.3 Potential-Programmed Reduction (PPR)	203
	2.4 Electrocatalytic Operation of Solid Electrolyte Cells	204
	2.5 Electrocatalytic Kinetics	205
3	In Situ Controlled Promotion of Catalysis: the NEMCA Effect	212
	3.1 Experimental Setup	212
	3.1.1 The Catalyst Film	212
	3.1.2 Counter and Reference Electrodes	215
	3.2 Transient and Steady-state EP Experiments	216
	3.3 Definitions and Some Key Aspects of EP	218
	3.3.1 NEMCA Time Constant τ	218
	3.3.2 Enhancement Factor or Faradaic Efficiency Λ	218
	3.4 Spectroscopic Studies	220
	3.5 The Effective Electrochemical Double Layer in Catalysis	222
4	Purely Catalytic Aspects of In Situ Controlled Promotion	224
	4.1 Rate Enhancement Ratio ρ	224
	4.2 Promotion Index P_i	225
	4.3 Electrophobic and Electrophilic Reactions	228
	4.4 The Work Function of Catalyst Films Interfaced with Solid Electrolytes	230
	4.5 Dependence of Catalytic Rates and Activation Energies on Catalyst Work Function $e\Phi$	233
	4.6 Vocano and Inverted Volcano Plots	234
	4.7 Selectivity Modification	236
	4.8 Promotional Effects on Chemisorption	237
5	Promotional Studies Using O^{2-} Conductors	239
6	Promotional Studies Using Na^+ Conductors	243
7	Promotional Studies Using H^+ , OH^- , F^- and Mixed Conductors	244
	7.1 Proton Conductors	244
	7.2 F^- -Conductors	245
	7.3 Mixed Conductors	245
	7.4 Aqueous Electrolytes	246

8	Summary of the Theory of NEMCA	246
9	Concluding Remarks	250
	References	251
Chapter 7	Electrosorption Studies in Electrocatalysis	254
	<i>By György Horányi</i>	
1	Introduction	254
	1.1 Catalysis and Electrocatalysis	254
	1.2 The Role of Electrosorption (Adsorption Processes)	255
	1.3 The Problem of the Adsorption Equilibrium	255
2	Experimental Technique	258
3	The Main Trends	260
4	The Nature and Surface Structure of the Electrode (Electrocatalyst)	262
	4.1 Smooth and Rough Polycrystalline Surfaces	262
	4.2 Well-defined Surfaces	263
	4.2.1 Unusual Hydrogen Adsorption States on Pt(111)	263
	4.3 Polycrystalline Systems with Preferred Crystallographic Orientation	264
	4.3.1 Electrochemical Faceting	264
	4.3.2 Preparation of Electrodes with Preferred Crystallographic Orientation by Platinization	265
5	Adsorption of Inorganic Species	265
	5.1 Anion Adsorption	265
	5.1.1 The Study of the Structure and Bonding of Adsorbed Species	265
	5.1.2 Potential and Concentration Dependence	266
	5.1.3 Induced Anion Adsorption	268
	5.1.4 Strong Anion-Surface Interactions	268
	5.2 Cation Adsorption and Underpotential Deposition	270
	5.2.1 Induced Adsorption of Cations	270
	5.2.2 Formation of Adatoms (upd) and the Adsorption of Anions on the Surfaces Modified by Adatoms	271
	5.3 Electrosorption of Oxygen and Formation of Surface Oxide Layers	272
	5.4 Miscellaneous Inorganic Species	274
	5.4.1 Water Adsorption	274
	5.4.2 Nitrogen Compounds	275

	5.4.3 Sulfur Compounds	275
6	The Electrosorption of Organic Species	275
	6.1 Electrosorption of Species Containing One Carbon Atom	275
	6.1.1 The Electrosorption of CO	276
	6.1.2 Electrosorption and Reduction of CO ₂	278
	6.1.3 Electrosorption and Electrooxidation of Formic Acid and Formaldehyde	280
	6.1.4 Electrosorption and Oxidation of Methanol	282
	6.1.5 Other Species Containing One Carbon Atom	283
	6.2 Electrosorption of Aliphatic Organic Molecules Containing More Than One Carbon Atom	284
	6.2.1 Ethanol, Acetaldehyde, and Acetic Acid	284
	6.2.2 Ethylene Glycol and its Derivatives	285
	6.2.3 Alcohols Containing Three Carbon Atoms	287
	6.2.4 Alcohols and Their Derivatives Containing More Than Three Carbon Atoms	289
	6.2.5 Electrosorption and Reactions of Halogenated Hydrocarbons	291
	6.2.6 Unsaturated C ₂ Hydrocarbons	291
	6.2.7 Amino Compounds (Amines, Aminoacids, Polypeptides)	291
	6.3 Electrosorption of Aromatic Compounds	292
7	Concluding Remarks	295
	Acknowledgment	295
	References	295
Chapter 8	Applications of Electron Spin Resonance Spectroscopy to Catalysis in Direct Coal Liquefaction	302
	<i>By Mohindar S. Seehra and Manjula M. Ibrahim</i>	
1	Introduction	302
2	ESR Spectroscopy, Free Radicals, and Coal Structure	302
3	Free Radicals in Coal Pyrolysis	305
4	ESR Spectroscopy of Coal Liquefaction Products	308
5	In Situ ESR Spectroscopy of Catalytic Depolymerization, Hydrogenation, and Liquefaction	310
	5.1 Apparatus Development	310

5.2	Role of Sulfur	310
5.3	Iron-based Catalysts	311
5.4	Acid Catalysts	312
5.5	Coprocessing of Coal with Waste Tires	314
5.6	Hydrogenation	314
6	Electron State of DCL Catalysts	316
7	Concluding Remarks	318
	Acknowledgments	318
	References	318
Chapter 9	Theoretical Study of Some Conditions' Effect on Catalytic Reaction	321
	<i>By Shigemi Mandai</i>	
1	Introduction	321
2	Governing Equations for Calculating Catalyst and Gas Temperatures	322
2.1	Assumptions	322
2.2	Governing Equations	322
2.3	Mass Transfer Coefficient	323
2.4	Heat Transfer Coefficient	324
2.5	Pressure Drop	325
3	Results and Discussion	326
3.1	Basic Consideration	326
3.1.1	Mass Transfer Effect	326
3.1.2	Effective Area	327
3.1.3	Flow Condition	327
3.1.4	Hydrodynamic Entrance Region	328
3.2	Effects on Conversion Efficiency	329
3.2.1	Inlet Temperature Effect	329
3.2.2	Reference Velocity Effect	330
3.2.3	Pressure Effect	330
3.2.4	Cell Size Effect	331
3.3	Effects on Pressure Drop	332
3.3.1	Inlet Temperature Effect	332
3.3.2	Reference Velocity Effect	332
3.3.3	Pressure Effect	332
3.3.4	Cell Size Effect	333
3.4	Axial Distributions	333

3.5	Simulation Results	334
3.5.1	Conversion Efficiency	334
3.5.2	Maximum Temperature	334
4	Conclusion	335
	Acknowledgment	336
	Notations	336
	References	336
