<b>Chapter 1 Strong Solid Bases for Organic Reactions</b>	<b>1</b>
<i>By Yoshio Ono and Toshihide Baba</i>	
1 Introduction	1
2 Role of Solid Base and Basic Sites as a Catalyst	2
2.1 Abstraction of Protons	2
2.2 Activation of Reactants without Proton Abstraction	2
2.3 Cooperative Action of Acidic and Basic Sites	2
3 Base Strength of Basic Sites	3
3.1 $H_-$ Acidity Function	3
3.2 Indicator Method	3
3.3 Other Methods for Determining Basic Strength	4
4 Base Strength and Catalytic Reactions	5
5 Solid Base Materials	8
5.1 Alkaline Earth Oxides	8
5.2 Alkali Metals Supported on Metal Oxides	9
5.3 Alkali Metals on $Al_2O_3$ Treated with Alkali Metal Hydroxides	10
5.4 $KNH_2/Al_2O_3$	10
5.5 Alkali Metal Compound Supported on Alumina	14
5.5.1 $KNO_3/Al_2O_3$ , $KHCO_3/Al_2O_3$ , $K_2CO_3/Al_2O_3$	14
5.5.2 $LiOH/Al_2O_3$ , $NaOH/Al_2O_3$ , $KOH/Al_2O_3$ , $RbOH/Al_2O_3$ , $CsOH/Al_2O_3$	14
5.6 Zeolites	14
5.7 Modified Zeolites	15
5.8 $Eu, Yb/Al_2O_3$	16
5.9 $KF/Al_2O_3$	16
5.10 Mixed Oxides	18
6 Reactions Catalysed by Solid Bases	20

6.1	Isomerizations	20
6.1.1	Isomerization of Alkenes	20
6.1.2	Isomerization of Alkenyl Amines	20
6.1.3	Isomerization of Allyl Ethers	21
6.1.4	Isomerization of Alk-1-yne	21
6.2	Nucleophilic Addition Reactions of Phenylacetylene	21
6.2.1	Dimerization of Phenylacetylene	21
6.2.2	Reactions of Alk-1-yne with Ketone or Aldehyde	22
6.3	Aldol-type Condensations	25
6.3.1	Aldol Condensations	25
6.3.2	Claisen–Schmidt Reactions	25
6.3.3	Knoevenagel Condensations	27
6.3.4	Michael Additions	28
6.3.5	Dehydrocondensation with Methanol	28
6.4	Nucleophilic Substitution at Silicon – Si–C Bond Formation	28
6.4.1	Metathesis of Trimethylsilylacetylene	29
6.4.2	Cross-metathesis of Alkynes	30
6.4.3	Reaction of Alk-1-yne with Silane	30
6.4.4	Reaction of Alk-1-ene with Diethylsilane	31
6.4.5	Reaction of Toluene with Diethylsilane	31
6.5	Miscellaneous Reactions	32
6.5.1	Tishchenko Reaction	32
6.5.2	Reactions of Silanes with Ketones or Aldehydes	33
6.5.3	Reaction of Aniline with Trimethylsilylacetylene	33
6.5.4	Ring Opening of Epoxides with $\text{Me}_3\text{SiCN}$	34
6.5.5	Hydrocyanation	34
6.5.6	Alkylations	34
6.5.7	Formation and Ring Transformations of Heterocycles	35
7	Concluding Remarks – Unsolved Problems	35
	<i>References</i>	36
<b>Chapter 2</b>	<b>Catalysis by Solid Bases</b>	<b>40</b>
	<i>By Eric J. Doscocil, Shailendra Bordawekar and Robert J. Davis</i>	
1	Introduction	40
2	Types of Basic Catalysts	41
2.1	Supported Alkali Metal Oxides	41

2.2	Hydrotalcites	41
2.3	Zeolites and Mesoporous Oxides	42
2.4	Alkali Metals Supported on Nanoporous Carbon	44
2.5	Basic Phosphate Oxynitride Catalysts	45
3	Characterization of Solid Base Catalysts	45
3.1	Theoretical Ranking of Solid Basicity	46
3.1.1	Sanderson Intermediate Electronegativity	46
3.1.2	Molecular Orbital Calculations	46
3.2	Experimental Ranking of Solid Basicity	47
3.2.1	Infrared Spectroscopy of Adsorbed Probe Molecules	47
3.2.2	Visible Absorption Spectroscopy of Adsorbed Iodine	50
3.2.3	Microcalorimetry of Adsorbed Probe Molecules	52
3.2.4	Temperature Programmed Desorption (TPD) of Probe Molecules	54
3.2.5	X-Ray Absorption Spectroscopy	54
3.2.6	X-Ray Photoelectron Spectroscopy	56
4	Probe Reactions over Solid Base Catalysts	57
4.1	Double-bond Isomerization	58
4.2	Alcohol Dehydrogenation	59
4.3	Hydrogenation Reactions	60
4.4	Condensation Reactions	61
4.4.1	Aldol Condensation	61
4.4.2	Knoevenagel Condensation	62
4.5	Alkylation Reactions	63
4.6	Side-chain Alkenylation of <i>o</i> -Xylene with 1,3-Butadiene	64
4.7	Miscellaneous Reactions	65
5	Conclusions	67
	Acknowledgements	67
	References	67
<b>Chapter 3</b>	<b>Solid Sorbents for Catalytic NO<sub>x</sub> Removal</b>	<b>73</b>
	<i>By Masato Machida</i>	
1	Introduction	73
2	Materials for NO <sub>x</sub> Sorption	74
2.1	Carbonaceous Solids	74
2.2	Zeolites	75

2.3	Alumina	76
2.4	Alkaline Solids	77
2.5	Transition Metal Oxides containing Alkaline Earths	78
2.6	NO <sub>x</sub> Intercalation Compounds	82
2.7	Non-alkaline Solid Oxides	83
2.8	Heteropoly Compounds	87
3	Regeneration of NO <sub>x</sub> Sorbent	88
3.1	Pressure Swing Process	89
3.2	Thermal (Temperature) Swing Process	90
3.3	Reduction–Oxidation Cycles	90
4	Practical Applications of NO <sub>x</sub> Sorption	90
4.1	Flue Gas Treatment for Stationary Sources	90
4.2	Automobile NO <sub>x</sub> Storage Catalysts	92
5	Conclusion	93
	<i>References</i>	93
<b>Chapter 4</b>	<b>Partial Oxidation of Light Alkanes in Short Contact Time Microreactors</b>	<b>98</b>
	<i>By P. Aghalayam, Y.K. Park and D.G. Vlachos</i>	
1	Introduction	98
2	CH <sub>4</sub> Partial Oxidation on Platinum and Rhodium Catalysts	99
2.1	Unsupported Catalysts	101
2.2	Foam and Extruded Monoliths	103
2.3	Fluidized Beds	103
2.4	The Effect of the Support and Pore Diameter	104
3	Influence of Operating Conditions	104
3.1	Temperature	104
3.2	Flow Velocity and Contact Time	104
3.3	Pressure	107
3.4	Dilution	108
3.5	Inlet Fuel Composition	108
3.6	Influence of Different Surface Coverages	109
4	Analysis of the Effect of Operating Conditions	110
4.1	Model	110
4.2	Flow Velocity	112
4.3	Temperature	113

5	Bifurcation of Methane–Oxygen Mixtures Near Catalysts	114
5.1	Influence of Fuel Composition	114
5.2	Influence of Pressure and Flow Velocity	118
5.3	The Inhibiting Role of the Catalyst in Gas-phase Ignition	118
5.4	Importance of Gas-phase Reactions	119
6	Direct <i>versus</i> Indirect Path to Syngas Formation	121
7	A Quantitative Reaction Mechanism for Oxidation of Methane	125
7.1	Currently Proposed Mechanisms	125
7.1.1	Selectivity Mechanisms	125
7.1.2	Catalytic Ignition Mechanisms	126
7.1.3	Other Proposed Reaction Pathways	126
7.2	Limitations of the Existing Detailed Surface Reaction Mechanisms	126
7.2.1	Adsorption of CH <sub>4</sub>	127
7.2.2	The Role of Adsorbed Oxygen	128
7.2.3	Adsorbate–Adsorbate Interactions	129
7.2.4	Other Limitations	129
8	Partial Oxidation of Ethane and Higher Alkanes	130
8.1	Production of Olefins from Alkanes using Pt and Rh	131
8.2	The Mechanism of Alkane Dehydrogenation	131
9	Conclusions and Outlook	133
	Acknowledgement	134
	<i>References</i>	134
<b>Chapter 5</b>	<b>Indirect Liquefaction – Where Do We Stand?</b>	<b>138</b>
	<i>By Yongqing Zhang and Burtron H. Davis</i>	
1	Introduction	138
2	Today’s Commercial Operations	139
2.1	South Africa	140
2.2	Sasol	140
2.3	Mossgas	145
2.4	Shell	145
3	Large Pilot/Demonstration Plant Operations	148
3.1	Rheinpresussen–Koppers	148
3.2	British Fuel Research Station	153

3.3	US Bureau of Mines	153
3.4	Stanolind/Carthage Hydrocol	155
4	Standard Oil Co. (New Jersey) – Exxon	156
5	Pilot Scale Operations	161
5.1	Syntroleum	161
5.2	Gulf Oil	170
5.3	Rentech	171
5.4	Chinese Studies	172
5.5	Mobil Oil	172
6	Process and Economic Evaluations	174
7	Potential Commercial Operations	175
8	Summary of Current Status	180
	Acknowledgement	182
	<i>References</i>	182
<b>Chapter 6</b>	<b>Partial Oxidation of Methane Over Silicomolybdic Acid Catalysts</b>	<b>185</b>
	<i>By Akifumi Ueno</i>	
1	Introduction	185
2	Partial Oxidation of Methane on MoO <sub>3</sub> /SiO <sub>2</sub> and Alkali Metal-doped MoO <sub>3</sub> /SiO <sub>2</sub>	186
3	Active Sites on MoO <sub>3</sub> /SiO <sub>2</sub> and Reaction Mechanism of Selective Oxidation of Methane	192
4	Characterization of Surface Species Generated on MoO <sub>3</sub> /SiO <sub>2</sub> by Heat Treatments	197
5	Catalytic Activity of SMA Generated On or Impregnated on SiO <sub>2</sub>	204
6	Other Topics Concerning Heteropoly Acid Catalysts or Partial Oxidation of Methane	208
7	Summary of the Selective Oxidation of Methane on MoO <sub>3</sub> /SiO <sub>2</sub> Catalysts	211
