<b>Chapter 1 Catalytic Hydrodearomatization</b>	<b>1</b>
<i>By Mehri Sanati, Björn Harrysson, Mostafa Faghihi, Börje Gevert and Sven Järås</i>	
1 Introduction	1
2 Hydrogenation of Mono-, Di-, Tri-, Multiring and Mixtures of Aromatic Compounds	3
2.1 Reactivity in Hydrogenation Reactions	27
2.2 Thermodynamics of Hydrogenation	30
2.3 Reaction Pathways and Kinetics of Hydrogenation	31
2.3.1 Reaction Network	31
2.3.2 Reaction Order	31
2.3.3 Activation Energies	31
2.4 Catalysts and Nature of Catalytic Sites	32
3 Industrial Aspects	37
4 Summary and Conclusion	37
5 References	38
<b>Chapter 2 Heterogeneously Catalysed Oxidations for the Environmentally Friendly Synthesis of Fine and Intermediate Chemicals: Synergy between Catalyst Development and Reaction Engineering</b>	<b>43</b>
<i>By Wolfgang F. Hoelderich and Felix Kollmer</i>	
1 Introduction	43
2 Activation of the Oxidant by Noble Metal: BASF Citral Process	45
3 Activation of the Oxidant by Metal Oxide: Direct Oxidation of $\beta$ -Picoline	46

4	Activation of the Oxidant by Lewis Acid Sites: Direct Hydroxylation of Benzene	49
5	Activation of the Oxidant by H <sub>2</sub> over a Bifunctional Catalyst: Epoxidation of Propylene by a Mixture of H <sub>2</sub> and O <sub>2</sub>	52
6	Activation of the Oxidant by Immobilized Homogeneous Complexes: Stereoselective Epoxidation of Olefins	57
7	Activation of H <sub>2</sub> O <sub>2</sub> over Solid Acid Catalysts: Baeyer-Villiger Oxidation of Cyclopentanone	61
8	Summary	63
9	Acknowledgements	64
10	References	64
<b>Chapter 3</b>	<b>Catalytic Hydrogen Generation from Methanol</b>	<b>67</b>
	<i>By Johan Agrell, Bård Lindström, Lars J. Pettersson and Sven G. Järås</i>	
1	Introduction	67
1.1	Fuel Options for Hydrogen Generation	68
1.1.1	Methanol Synthesis	68
1.2	Methanol Conversion Processes	69
1.2.1	Decomposition	69
1.2.2	Steam Reforming	69
1.2.3	Partial Oxidation	70
1.2.4	Combined Reforming	71
2	Decomposition of Methanol	71
2.1	Introduction	71
2.2	Copper-based Catalysts	75
2.2.1	Reaction Pathway and By-product Formation	75
2.2.2	Reaction Mechanism	76
2.2.3	Promotional Effects	78
2.2.4	Catalyst Stability	79
2.2.5	Active Species	79
2.2.6	Calcination Temperature and Catalyst Copper Content	80
2.3	Precious Metal Catalysts	80
2.3.1	Catalyst Activity and Product Distribution	80
2.3.2	The Support	81
2.3.3	Reaction Pathway and Mechanism	83

2.4	Other Catalyst Materials	84
2.4.1	Nickel-based Catalysts	84
2.4.2	Hydrogen Storage Alloys	84
2.4.3	Other Metal Oxides	84
3	Steam Reforming of Methanol	84
3.1	Introduction	84
3.2	Copper-based Catalysts	87
3.2.1	Reaction Pathway	87
3.2.2	By-product Formation	88
3.2.3	Steam–Methanol Ratio and Water-Gas Shift	89
3.2.4	Reaction Mechanism	89
3.2.5	Kinetic Models	90
3.2.6	Catalyst Composition	91
3.3	Other Transition Metal-based Catalysts	95
3.3.1	Reaction Pathway	95
3.3.2	Catalyst Composition	95
4	Partial Oxidation of Methanol	96
4.1	Introduction	96
4.2	Copper-based Catalysts	99
4.2.1	Reaction Pathway	99
4.2.2	By-product Formation	100
4.2.3	Reaction Mechanism	100
4.2.4	Reaction Temperature	101
4.2.5	Oxygen Partial Pressure	101
4.2.6	Catalyst Composition	102
4.2.7	Catalyst Stability	103
4.2.8	The Oxidation State of Copper	103
4.2.9	Cu–ZnO Synergistic Effects	103
4.3	Palladium Catalysts	104
4.3.1	Catalytic Behaviour	104
4.3.2	PdZn Alloy	105
4.3.3	The Support	105
4.4	Combined Reforming over Copper-based Catalysts	105
4.4.1	Background	105
4.4.2	Overall Reaction	106
4.4.3	Oxygen and Steam Partial Pressures	106
4.4.4	Reaction Temperature	107
4.4.5	Catalyst Stability and the Oxidation State of Copper	107
4.4.6	By-product Formation	107
4.4.7	Kinetics	107
5	Methanol Reforming for Fuel Cell Applications	109
5.1	Introduction	109

5.2	Partial Oxidation <i>versus</i> Steam Reforming Technology	109
5.2.1	Steam Reforming	109
5.2.2	Partial Oxidation	110
5.2.3	Combined Reforming	111
5.3	CO Clean-up	111
5.3.1	Water-Gas Shift	112
5.3.2	Selective CO Oxidation	112
5.3.3	Methanation	112
5.3.4	Palladium Membranes	113
5.4	Industrial Activities	113
5.4.1	Argonne National Laboratory	114
5.4.2	Arthur D Little	114
5.4.3	Ballard	115
5.4.4	DaimlerChrysler	115
5.4.5	Ford	115
5.4.6	General Motors (GM)	116
5.4.7	Haldor Topsøe	116
5.4.8	International Fuel Cell Corporation (IFC)	116
5.4.9	Johnson Matthey	117
5.4.10	Toshiba	117
5.4.11	Toyota	117
5.4.12	Volkswagen (VW)–Süd Chemie	117
5.4.13	Volvo	118
5.4.14	Wellman–ECN	118
5.4.15	Case Study I: The Johnson Matthey HotSpot™ Reactor	118
5.4.16	Case Study II: The Argonne APOR Fuel Processor	119
6	Intellectual Property	120
7	Concluding Remarks	126
8	Acknowledgements	126
9	References	127
<b>Chapter 4</b>	<b>Reforming of CH<sub>4</sub> by CO<sub>2</sub>, O<sub>2</sub> and/or H<sub>2</sub>O</b>	<b>133</b>
	<i>By Tomoyuki Inui</i>	
1	Introduction	133
1.1	Recent Research	133
1.2	Significance of the Subject and Disadvantage to be Overcome	134
1.3	Indispensable Requisites of Catalytic Technologies for Moderating CO <sub>2</sub> Problems and/or Producing Syngas	135

2	Comparison of the Intrinsic Activity of Ni and Noble Metals Belonging to Groups 8–10	135
3	Performance of Ni Catalyst Supported on Different Kinds of Support and the Effect of Additives	137
4	Prevention of Coke Formation by Combining Alkaline-earth or Rare-earth Oxides	139
5	Attempts to Avoid Equilibrium-limited Conversion	141
6	Kinetic and Mechanistic Studies	141
7	High Ni-loading Catalyst Supported on ZrO <sub>2</sub> Prepared by a Novel Method	142
8	Towards Rapid Reforming of Methane – Catalytic Partial Oxidation of Methane to Syngas	143
9	Performance of Ni-based Composite Catalyst to Carry Out the Ultra-rapid CO <sub>2</sub> Reforming of Methane	144
10	Application to Other Reactions	148
11	Summary of the Review	148
12	Acknowledgement	150
13	References	150
<b>Chapter 5</b>	<b>Oxidative Functionalization of Ethane and Propane</b>	<b>155</b>
	<i>By Olga V. Buyevskaya and Manfred Baerns</i>	
1	Introduction	155
2	Mechanisms of Ethane and Propane Activation	155
3	Oxidative Dehydrogenation of Ethane	156
3.1	Catalyst Types and Reactor Concepts	158
3.1.1	(Mixed) Oxides or Supported Catalytic Materials Consisting of Reducible Metal Oxides	159
3.1.2	Non-reducible (Mixed) Oxides	161
3.1.3	Catalytic Materials Containing Noble Metals	163
3.2	Ethane Dehydrogenation in the Presence of CO <sub>2</sub>	166
3.3	Summary on ODE	167

4	Oxidative Dehydrogenation of Propane	168
4.1	Mixed Oxides or Supported Catalytic Materials Consisting of Reducible Metal Oxides	168
4.1.1	Catalyst Development	168
4.1.2	Mechanistic and Characterization Studies	172
4.2	Non-reducible (Mixed) Oxides	176
4.2.1	REO-based Catalysts	176
4.2.2	Boron-containing Oxide Catalysts	177
4.3	Catalytic Materials Containing Noble Metals	178
4.4	Reactor Concepts and Modes of Operation	178
5	Partial Oxidation of Ethane and Propane to Oxygenates	180
5.1	Ethane to Acetic Acid	180
5.1.1	Catalysts	180
5.1.2	Fundamentals and Kinetics	181
5.1.3	Reactor Concepts	185
5.2	Propane to Acrylic Acid and Acrolein	186
5.2.1	Direct Oxidation of Propane to Acrylic Acid	186
5.2.2	Direct Oxidation of Propane to Acrolein	190
6	Other Reactions	192
7	Summary and Outlook	193
8	Acknowledgements	193
9	References	193
<b>Chapter 6</b>	<b>Metal Halide Oxide Catalysts Active for Alkane Selective Oxidation</b>	<b>198</b>
	<i>By Wataru Ueda and Sui Wen Lin</i>	
1	Introduction	198
2	Gas-phase Seletive Oxidation in Halogen-containing Systems	200
2.1	Epoxidation	200
2.2	Redox System	202
2.3	Gas-phase Halogen Promoters	202
2.4	Oxidative Reaction of Alkanes	203
3	Catalytic Properties of Halogen-containing Metal Oxides	204
3.1	Oxidative Coupling of Methane	204
3.2	Oxidative Dehydrogenation of Ethane	206
3.3	Oxidative Dehydrogenation of C <sub>3+</sub>	209
4	Structural Design of Layered Metal Chloride Oxide Catalysts	210

4.1	Structural Background	211
4.2	Layer Structure–Activity Relationship	217
4.3	Structural Tuning in Local Chlorine Environment	220
4.4	Structural Tuning of Metal Oxide Layer	226
4.5	Halogen-involved Alkane Activation Mechanism	229
5	Conclusions	230
6	Acknowledgement	230
7	References	231
<b>Chapter 7</b>	<b>Selective Catalytic Reduction of Nitrogen Oxides by Ammonia</b>	<b>236</b>
	<i>By Sung-Won Ham and In-Sik Nam</i>	
1	Introduction	236
2	Reactions Involved	238
3	SCR Catalysts	239
3.1	V <sub>2</sub> O <sub>5</sub> -based Catalysts	239
3.2	Zeolite Catalysts	243
3.3	Newly Proposed Catalysts	244
4	Catalyst Poisoning and Deactivation	247
4.1	Sulfur Tolerance of SCR Catalysts	248
4.2	SO <sub>2</sub> Oxidation	250
5	Reaction Mechanism and Kinetics	252
6	Characteristics of an SCR Catalyst	254
6.1	Surface Acidity	254
6.2	State of the Vanadia Phase	255
7	Reactor Modeling and Process Characteristics	258
7.1	Low Pressure-drop Reactor	258
7.2	SCR Process Characteristics	261
8	Alternative Technology to NH <sub>3</sub> -SCR	262
9	Conclusions and Future Prospects	264
10	References	265

<b>Chapter 8 Recent Advances in Selective Conversion of Polycyclic Hydrocarbons into Specialty Chemicals over Zeolites</b>	<b>272</b>
<i>By Chunshan Song</i>	
1 Introduction	272
2 Selective Synthesis for Polycyclic Specialty Chemicals	275
2.1 Ring-shift Isomerization	276
2.2 Shape-selective Alkylation of Naphthalene	279
2.3 Shape-selective Alkylation of Biphenyl	287
2.4 Conformational Isomerization	288
2.5 Selective Hydrogenation of Naphthalene	291
2.6 Regio-selective Hydrogenation of Quinoline and Naphthol	292
3 Effects of Mordenite Dealumination on Naphthalene Isopropylation	293
3.1 Characterization of the Mordenite Catalysts	294
3.2 Selectivity and Activity of the Catalysts	299
3.3 Structure–Selectivity Relationships	303
3.4 Effect of Reaction Conditions and Catalyst Loading	304
3.5 Effects of Mordenite Dealumination on Further Conversion of 2,6-DIPN	307
3.6 Conformational Analysis of Shape-selective Isopropylation	310
3.7 Factors Affecting Shape-selective Naphthalene Alkylation	312
4 Considerations on Environmentally Friendly Synthesis of Chemicals over Zeolites	315
5 Conclusions	317
6 Acknowledgements	318
7 References	319
