Cover

Image provided courtesy of computational science company Accelrys (www.accelrys.com). An electron density isosurface mapped with the electrostatic potential for an organometallic molecule. This shows the charge distribution across the surface of the molecule with the red area showing the positive charge associated with the central metal atom. Research carried out using Accelrys' Materials Studio[®].

Promotion Effects in Co-based Fischer-Tropsch Catalysis	1
<i>Fernando Morales and Bert M. Weckhuysen</i>	
1 General Introduction	1
1.1 Fischer-Tropsch Synthesis	1
1.2 Scope of the Review Paper	5
2 Fischer-Tropsch Catalysis	6
2.1 Gas-to-Liquid Technology, Economic Impact and its Relevance to Society	6
2.2 Fischer-Tropsch Catalysts	8
3 Co-based Fischer-Tropsch Catalysts	9
3.1 Promotion Effects	10
3.2 Overview of the Promoter Elements Used in Co-based F-T Catalysts	16
4 Mn-promoted Fischer-Tropsch Catalysts	21
4.1 Mn-promoted Fe-based Fischer-Tropsch Catalysts	22
5 Concluding Remarks and Outlook	30
6 Acknowledgments	32
References	32

The Catalysis of Biodiesel Synthesis 41
*Edgar Lotero, James G. Goodwin, Jr., David A. Bruce,
Kaewta Suwannakarn, Yijun Liu and Dora E. Lopez*

1	Introduction	41
2	Overview	43
2.1	Vegetable Oils and Animal Fats	43
2.2	Reactions	44
2.3	Physicochemical Properties of Biodiesel	46
2.4	The Feedstock Issue	47
2.5	Processing Methodologies	48
3	Homogeneous Catalysis	49
3.1	Base-Catalyzed Synthesis	49
3.2	Acid-Catalyzed Synthesis	55
3.3	Integrated Acid-Base Biodiesel Synthesis	60
3.4	Existing Problems with Homogeneous Catalysts	62
4	Heterogeneous Catalysis in Biodiesel Synthesis	63
4.1	Catalysis by Metals, Metal Compounds and Supported Metal Complexes	64
4.2	Catalysis by Solid Bases	67
4.3	Catalysis by Solid Acids	72
4.4	Potential Problems with Heterogeneous Catalysts	77
5	Conclusions and Future Perspectives	78
	References	80

Catalysis with Nitrides and Oxynitrides 84
J.S.J. Hargreaves and D. Mckay

1	Introduction	84
2	Preparation of Nitride and Oxynitride Catalysts	85
3	Catalytic Reactions with Nitrides and Oxynitrides	89
3.1	Ammonia Synthesis, Ammonia Decomposition and Hydrazine Decomposition	89
3.2	Amination and Ammoxidation	92
3.3	NO Removal	93
3.4	Hydrotreating and Hydrogenation	94
3.5	Base Catalysis	96
3.6	Photocatalysis	98
3.7	Use as Supports	99

3.8 Hydrogen Storage	102
4 Conclusions and Outlook	102
5 Acknowledgments	103
References	103

Kinetics of Surface Reactions with Lateral Interactions: Theory and Simulations 109

C.G.M. Hermse and A.P.J. Jansen

1 Introduction	109
2 Basics of Lateral Interactions	110
2.1 The Mechanism of Lateral Interactions	110
2.2 Equilibrium Aspects	114
2.3 Effect of Lateral Interactions on the Kinetics	119
3 Theory	120
3.1 Including Lateral Interactions in the Kinetics	121
3.2 Analytical Expressions for Lateral Interactions	133
3.3 Experimental Determination	135
3.4 Calculating Lateral Interactions	137
4 Examples	143
4.1 NO/Rh(111)	143
4.2 Sulfate on Fcc(111) Surfaces	145
4.3 CO/Rh(100)	148
4.4 O/Pt(111)	151
4.5 Tartaric Acid on Cu(110)	153
5 Outlook	155
6 Acknowledgments	157
References	157

Methane Decomposition: Production of Hydrogen and Carbon Filaments 164

T.V. Choudhary and D.W. Goodman

1 Introduction	164
2 Hydrogen Production	166
2.1 Catalytic Decomposition of Methane for Hydrogen Production	166
2.2 Step-wise Methane Reforming: Regeneration Issues	172

3	Production of Carbon Filaments by Catalytic Methane Decomposition	176
3.1	Ni-based Catalysts	176
3.2	Fe and Co-based Catalysts	179
4	Concluding Remarks	180
	References	181

Catalytic Reforming of Liquid Hydrocarbon Fuels for Fuel Cell Applications 184

Dushyant Shekhawat, David A. Berry, Todd H. Gardner and James J. Spivey

1	Introduction	184
1.1	Demands for Fuel Reforming Technology	184
1.2	Applications/Types of Reforming	185
1.3	Issues	188
1.4	Scope of this Chapter	190
2	Deactivation	190
2.1	Carbon Deposition	190
2.2	Sulfur Poisoning	203
3	Steam Reforming	206
3.1	Thermodynamics	207
3.2	Catalysts	210
4	Partial Oxidation	214
4.1	Thermodynamics	215
4.2	Catalysts	215
5	Autothermal Reforming	218
5.1	Thermodynamics	218
5.2	Catalysts	221
5.3	Exhaust Gas Reforming	231
6	Pyrolysis/Cracking	232
7	Plasma-Assisted Reforming	235
7.1	Non-Thermal Plasma	235
8	Supercritical Reforming	235
9	Prereforming	237
10	Kinetics	239
10.1	Reactivity of Hydrocarbons	242
11	Concluding Remarks	243
	References	244
