

Cover

Image provided courtesy of computational science company Accelrys (www.accelrys.com). An electron density isosurface mapped with the electrostatic potential for an organometallic molecule. This shows the charge distribution across the surface of the molecule with the red area showing the positive charge associated with the central metal atom. Research carried out using Accelrys' Materials Studio[®].

Preface

7

James J. Spivey and Kerry M. Dooley

Fischer-Tropsch synthesis on cobalt catalysts: the effect of water

 13

Edd Anders Blekkan, Øyvind Borg, Vidar Frøseth and Anders Holmen

Introduction	13
Deactivation	14
Activity and kinetics	20
Selectivity	25
Mechanistic considerations	26
Summary and conclusion	29

Catalytic strategies for improving specific fuel properties

 33

Phuong T. M. Do, Steven Crossley, Malee Santikunaporn and Daniel E. Resasco

Introduction	33
Prediction of fuel properties	35
Catalytic strategies to optimize fuel properties	43
Implementation of the catalytic strategies	49
Concluding remarks	61

Advances in catalysis and processes for hydrogen production from ethanol reforming 65

Velu Subramani and Chunshan Song

Introduction	65
Ethanol as a hydrogen source	68
Hydrogen production from ethanol	70
Catalyst deactivation	98
Comparison of ethanol reforming processes	100
Summary and research opportunities	102

A CO and H₂ space time yield comparison of recent literature on methanol decomposition 107

J. S. J. Hargreaves and G. Ormsby

Introduction	107
Reaction pathways	107
Space time yields	109
Conclusions	119

Low temperature water-gas shift catalysts 122

G. Jacobs and B. H. Davis

Introduction	122
Homogeneous catalysis and heterogenized applications of homogeneous catalysis	123
Heterogeneous low temperature shift	179
Conclusions	272

Chemical mapping of chemical conversion in heterogeneous catalytic reactors using MRI 286

Lynn F. Gladden, Michael D. Mantle and Andrew J. Sederman

Introduction	286
Introduction to magnetic resonance imaging	287
More advanced pulse sequences: RARE and SPRITE	291
Obtaining chemical information in magnetic resonance images	294
Chemical mapping in heterogeneous catalytic reactors	299
Concluding remarks	307

Mechanistic studies of electrocatalytic reactions	309
<i>Matthew P. Hyman and J. Will Medlin</i>	
Introduction	309
The electric double layer	310
Electrode kinetics	313
Structure of water and protons at electrode surfaces	317
UHV simulation of the EDL	320
Theoretical simulation of the EDL	324
Case studies of electrode reactions	327
Conclusion	333
Abbreviations	333

Non-precious metal oxygen reduction catalysts for PEM fuel cells	338
<i>Paul H. Matter, Elizabeth J. Biddinger and Umit S. Ozkan</i>	
Introduction	338
Cathode issues	339
Characterization of non-precious metal cathode electrocatalysts	341
Groups of catalysts	345
Mechanism	360
Conclusions	361

Nano-architecture and reactivity of Titania catalytic materials.	367
<i>Quasi-1D nanostructures</i>	
<i>Gabriele Centi and Siglinda Perathoner</i>	
Introduction	367
<i>Quasi</i> one-dimensional (1D) nanostructures	370
Conclusions	387
