<b>Chapter 1 The Electrochemistry of Porous Electrodes: Flow-through and Three-phase Electrodes</b>	<b>1</b>
<i>By N. A. Hampson and A. J. S. McNeil</i>	
<b>1 Introduction</b>	<b>1</b>
<b>2 Flow-through Electrodes</b>	<b>2</b>
Introduction	2
Cell Dispositions	2
Factors affecting Reaction Rates	2
Hydrodynamics	2
Electrochemistry	4
Theory of Porous Flow Electrodes	4
Flow-by Porous Electrodes	5
Flow-through Porous Electrodes	6
Comparison of Flow-through and Flow-by Porous Electrodes	11
Applications	12
Electrochemical Concentration	13
Trickle-bed Reactors	15
Fluidized-bed Electrodes	17
<b>3 Three-phase Electrodes</b>	<b>21</b>
Introduction	21
Soviet Studies of Three-phase Electrodes	23
Introduction	23
Electrode Structure	24
Capillary Equilibrium	27
The Electrochemistry of Gas Electrodes	33
Specific Materials	45
Liquid-Reagent Electrodes	49
Matrix Cells	53
Flow-through Gas Electrodes	59
Western Work	59
<b>Chapter 2 Semiconductor Electrochemistry</b>	<b>66</b>
<i>By L. M. Peter</i>	
<b>1 Introduction</b>	<b>66</b>
<b>2 Progress in the Theory of the Illuminated Semiconductor/Electrolyte Junction</b>	<b>68</b>
The Gärtner Theory	68

Quasi-equilibrium Theories of Space-Charge	
Recombination	69
The Albery Theory	72
Surface Recombination and Surface States	74
Fermi-level Pinning <i>versus</i> Inversion	78
Other Topics	79
Thermodynamic and Kinetic Aspects	79
<b>3 Experimental Studies of Semiconductor Electrodes</b>	<b>81</b>
Cadmium Chalcogenides and Related Compounds	81
III–V Compounds	83
Laser-type Transition-metal Dichalcogenides and	
Related Compounds	87
Transition-metal Oxides	92
Silicon	96
Other Semiconductor Materials	98
Experimental Methods	99
<b>Chapter 3 Spectroelectrochemistry</b>	<b>101</b>
<i>By J. Robinson</i>	
<b>1 Introduction</b>	<b>101</b>
<b>2 Transmission Methods</b>	<b>102</b>
Optically Transparent Electrodes	102
Semi-infinite Linear-diffusion Regime	103
Optically Transparent Thin-layer Electrodes	110
Other Transmission Techniques	113
Closure	114
<b>3 Reflectance Methods</b>	<b>114</b>
Attenuated Total Internal Reflectance Spectroscopy	114
Ellipsometry	117
Ellipsometers and Ellipsometric Techniques	119
Modelling the Electrode/Electrolyte-solution	
Interface	122
Applications of Ellipsometry	123
Future Developments	126
Ultraviolet—Visible Reflectance Spectroscopy	127
Solution Free Species	130
The Electroreflectance Effect	131
Adsorption Studies	135
Underpotential Deposition	137
Surface Conductance	138
Infrared Reflectance Spectroscopy	139
Surface-plasmon Spectroscopy	140
<b>4 Laser Raman Spectroscopy</b>	<b>144</b>
Resonance Raman Spectroscopy	146
Surface-enhanced Raman Scattering (SERS)	147
Electrochemical Applications of SERS	149

<i>Contents</i>	ix
<b>5 Photothermal and Photoacoustic Spectroscopies</b>	152
<b>6 Mössbauer Spectroscopy</b>	153
<b>7 Electron Spin Resonance</b>	156
<b>8 Concluding Remarks</b>	160
<b>Chapter 4 The Electrochemistry of Transition-metal Complexes</b>	<b>162</b>
<i>By C. J. Pickett</i>	
<b>1 Introduction</b>	162
<b>2 Titanium, Zirconium, and Hafnium</b>	163
<b>3 Vanadium, Niobium, and Tantalum</b>	164
<b>4 Chromium, Molybdenum, and Tungsten</b>	165
Introduction	165
Aqueous Electrochemistry	166
Oxo-ligand Complexes	167
Arene, Cyclopentadienyl, and Tropylium Complexes	170
Carbonyls and Isocyanides	172
Nitrosyl Complexes	174
Dinitrogen, Diazenido-, and Related Complexes	175
Electron-transfer Catalysis of Ligand-substitution Reactions	176
Other Studies of Group 6 Metal Complexes	180
Modified Electrodes	181
<b>5 Manganese, Technetium, and Rhenium</b>	181
Introduction	181
Manganese	182
Axial Ligand Speciation	182
Electrode-catalysed Substitution of Ligands	182
Other Studies of Manganese Complexes	182
Technetium and Rhenium	183
<b>6 Iron</b>	184
Introduction	184
The Cyanides: Prussian Blue Electrodes	184
Pyridine, Bipyridyl, Schiff's Base, and Other <i>N</i> -Ligand Complexes: Porphyrins	185
Oxidation of Complexes in Liquid SO <sub>2</sub>	185
Spin-state Dependence of Heterogeneous Electron-transfer Kinetics	186
Porphyrins	186
The Cytochromes	188
Cytochrome <i>c</i>	188
Other Cytochromes	189
Bioelectrocatalysis	190

Iron–Sulphur Compounds and the Ferredoxins	191
Introduction	191
Synthetic Fe–S and Fe–S–Mo Compounds	192
Electroreduction of Carbon Dioxide, Dinitrogen, and Nitrogenase Substrates in the Presence of Iron–Sulphur Clusters	193
Ferredoxins	195
Organometallic Compounds	195
Ferrocenes, Ferrocenophanes, Ferroles, and Ferrocaboranes	195
Arene, Alkyl, Acyl, and Aryl Complexes	197
Carbonyls, Phosphine, Phosphite, Isocyanide, and Nitrosyl Complexes	200
Other Studies	201
<b>7 Ruthenium and Osmium</b>	202
Introduction	202
Ruthenium	202
Mononuclear Complexes	202
Dinuclear Complexes	204
Ligand Transformation at Ru Sites	205
Organometallic Complexes	206
Modified Electrodes	206
Osmium	207
<b>8 Cobalt, Rhodium, and Iridium</b>	208
Introduction	208
Cobalt	208
Schiff's-base and Porphyrin-ligated Complexes	208
Studies of the Cobalamins	210
Organometallic Compounds	211
Other Studies	213
Rhodium and Iridium	214
<b>9 Nickel, Palladium, and Platinum</b>	216
Introduction	216
Nickel	216
Schiff's-base and Macrocyclic Ligand Complexes	216
Organometallic and Tertiary Phosphine Complexes	218
Other Studies of Nickel Complexes	219
Palladium and Platinum	220
<b>Chapter 5 Organic Electrochemistry – Synthetic Aspects</b>	<b>222</b>
<i>By J. Grimshaw</i>	
<b>1 Introduction</b>	222
<b>2 Reduction</b>	225
Hydrocarbons	225
Halogen-containing Compounds	225

Carbonyl Compounds	227
Activated Olefins	229
Nitrogen Compounds	231
Sulphur Compounds and Carbon Dioxide	234
<b>3 Oxidation</b>	<b>235</b>
Alkanes and Alkenes	235
Aromatic Hydrocarbons, Ethers, and Phenols	237
Alkanes bearing Oxygen Functions	241
Nitrogen Compounds	243
<b>Chapter 6 State Gas Sensors and Monitors</b>	<b>246</b>
<i>By D. E. Williams and P. McGeehin</i>	
<b>1 Introduction</b>	<b>246</b>
<b>2 Solid-electrolyte Galvanic Cells</b>	<b>247</b>
General	247
An Example – Solid Electrolyte Devices for Engine Control	251
Reducing Electrolyte Resistance – Thick-film Devices	257
Non-equilibrium Phenomena at Electrodes	258
Electrode Kinetics on Oxide Electrolytes	259
Electrode Phenomena on Oxygen Sensors	261
Mixed-potential Devices	262
An Oxygen Sensor utilizing Change in Electrode Impedance	264
Reference Electrodes	265
Amperometric Devices	267
Solid-electrolyte Transistors	269
<b>3 Gas Sensors using Conductivity Changes</b>	<b>270</b>
Changes in Bulk Conductivity in Semiconducting Oxides	270
Surface-conductivity Devices	273
Moisture Detection	273
Detection of Reducing Gases	279
<b>4 Catalytic Gas Detectors</b>	<b>285</b>
<b>5 Semiconductor Junction Devices</b>	<b>286</b>
Schottky Diodes	287
MOS Capacitors and Field-effect Transistors	288
<b>6 Conclusions</b>	<b>289</b>
