Chapter 1 Nuclear Shielding

By W. T. Raynes

1 Introduction	1
2 Chemical Shift Scales	2
3 Basic Aspects of Nuclear Shielding	5
A Magnetic Field-dependent Chemical Shifts	5
B Developments in Theory	6
4 Calculations of Nuclear Shielding	10
A <i>Ab Initio</i> Calculations	10
B Semi-empirical Calculations	14
5 Transmissions of Shielding Effects within Molecules	16
A Introduction	16
B Inductive and Resonance Effects	17
C Magnetic Anisotropy Effects	21
D The Ring Current Effects	25
E Electric Field Effects	34
F Intramolecular Dispersion Forces	38
G Steric Effects	40
H Intramolecular Hydrogen-bonding	41
I Isotope Shifts	42
J Shielding Anisotropies	43
6 Shieldings of Particular Nuclear Species	45
A Introduction	45
B Proton Chemical Shifts	45
C Carbon Chemical Shifts	46
D Fluorine Chemical Shifts	48
E Nitrogen Chemical Shifts	49
F Chemical Shifts of Nuclei Other Than H, C, F, and N	49

Chapter 2 Nuclear Spin–Spin Coupling

By R. Grinter

1 Introduction	51
-----------------------	----

2 Basic Theory	51
A Ramsey's Equations	51
B The Average Energy Approximation	53
C Useful General Expressions	53
D The Finite Perturbation Theory (FPT)	54
E Coupling by π -Electrons	55
F The Variation Method	55
G SI Units	55
3 Recent Theoretical Work	56
A Calculations on H ₂ or HD	56
B <i>Ab Initio</i> Calculations of Coupling in Small Molecules	59
C Semi-empirical Calculations	59
D Theoretical Work on π -Electron Coupling	61
E The Anisotropy of Electron-coupled Nuclear Spin Interactions	63
F Solvent Effects on Coupling	64
4 Coupling of Directly Bonded Nuclei	65
A Coupling between ¹³ C and ¹ H	65
B Coupling between ¹⁵ N and ¹ H	67
C Coupling between ³¹ P and ¹ H	68
D Coupling between ¹ H and Other Nuclei	69
E ¹ J(¹³ C ¹³ C) and ¹ J(¹³ C ¹⁴ / ¹⁵ N)	70
F Coupling between ¹³ C and ³¹ P	70
G Coupling between ¹³ C and ¹⁹ F	71
H ¹ J(¹³ CM) where M is a Metal	72
I Couplings to ¹⁹ F, except ¹ J(¹⁹ F ³¹ P)	72
J Couplings between ³¹ P and ¹⁹ F	73
K Other One-bond Couplings involving ³¹ P	74
5 Coupling between Atoms Separated by Two Chemical Bonds, ²J	77
A Geminal Proton-Proton Coupling across Carbon	78
B Geminal Proton-Proton Coupling across Other Elements	81
C ² J(¹³ CCH)	82
D Coupling of Other Elements to Hydrogen through Carbon	82
E ² J(¹⁹ FP ¹⁹ F) and ² J(¹⁹ FPH)	85
F ² J(¹⁹ FM ¹⁹ F), where M is a Metal	85
G ² J(¹⁹ FC ¹⁹ F)	87
H ² J(¹³ CO ³¹ P) and ² J(¹³ CC ³¹ P)	87

<i>Contents</i>	xi
I ${}^2J({}^{31}\text{PO}^{31}\text{P})$ and ${}^2J({}^{31}\text{PS}^{31}\text{P})$	87
J ${}^2J({}^{31}\text{PM}^{31}\text{P})$, where M is a Metal	87
K Other Two-bond Couplings	88
6 Coupling between Atoms Separated by Three Chemical Bonds, 3J	88
A Coupling of Hydrogen Atoms through Two Carbon Atoms	88
B ${}^3J(\text{HNCH})$ and ${}^3J(\text{HOCH})$	94
C ${}^3J({}^{13}\text{CCCH})$	95
D Coupling to Fluorine through Two Carbon Atoms. ${}^3J(\text{HCC}^{19}\text{F})$, ${}^3J({}^{13}\text{CCC}^{19}\text{F})$, and ${}^3J({}^{19}\text{FCC}^{19}\text{F})$	95
E Three-bond Couplings involving ${}^{31}\text{P}$ and ${}^1\text{H}$	97
F Miscellaneous Three-bond Couplings	99
7 Coupling between Nuclei Separated by Four or More Chemical Bonds	99
A Long-range Coupling between Protons	100
Long-range H–H Coupling in Saturated Systems	100
Long-range H–H Coupling in Unsaturated Systems	101
B Long-range Couplings involving at least One Nucleus other than H	106
Saturated Systems—Coupling between ${}^1\text{H}$ and ${}^{19}\text{F}$	106
Saturated Systems—Coupling between Other Nuclei	106
Unsaturated Systems	106
C ‘Through-space’ Coupling	108
8 Experimental Work of Significance for the Measurement or Interpretation of Spin–Spin Coupling Constants	111
A Multiple-resonance Experiments	111
B Bandshape Analyses	111
C Effects of Paramagnetic Materials	112
D Other Experimental Techniques	112

Chapter 3 Nuclear Spin Relaxation

By N. Boden

1 Introduction	115
2 Nuclear Spin Relaxation in Gases	116
A Introduction	116
B Theoretical Developments	117

C Diatomic Gases	118
D Polyatomic Gases	119
Pure Gases	119
Stepped T_1/ρ vs. ρ Plot	119
CH ₄ -O ₂ and CH ₄ -NO Mixtures	120
E Self-diffusion Measurements	121
3 Spin Relaxation in Liquids	121
A Pure Liquids	121
Molecular Rotation	121
Studies of Anisotropic Rotation	125
Relaxation by internal rotation of functional groups	126
Relaxation in water	127
Determination of nuclear quadrupole coupling constants	128
Studies of Scalar Relaxation	129
Relaxation in glasses and viscous liquids	129
B Molecular Motion and Association in Mixtures of Liquids	131
C Electrolyte Solutions	134
Diamagnetic Solutions	134
Paramagnetic Solutions	135
D Studies of Critical Phenomena in Liquids	137
E ¹³ C Relaxation Studies	138
F Methods for Selective Measurement of T_1 and T_2	140
4 Spin-echo Experiments in Liquids	142
A Self-diffusion Measurements	142
B Spin-echo Studies of Fluid Flow	143
C Carr-Purcell Spin-echo Experiments	143
5 Nuclear Spin Relaxation and Diffusion in Liquid Crystals	144
A Thermotropic Liquid Crystals	144
B Lyotropic Liquid Crystals	146
6 Spin Relaxation in Solids	147
A N.M.R. Saturation in Solids	147
B Nuclear Dipolar Relaxation	148
C Relaxation by Rotational Motion	149
D Spin-Lattice Relaxation by Spin-Rotational and Anisotropic Chemical Shielding Interactions	150

E Spin-Lattice Relaxation due to Paramagnetic Impurities	151
F Spin-Lattice Relaxation by Nuclear Quadrupole Interaction	152
G Spin-Lattice Relaxation Time Measurements in	
Miscellaneous Solids	153
Molecular Solids	153
Ionic Solids	155
Antiferromagnetic Solids	156
Metallic Hydrides	156
Hexagonal Ice	156
Molecules Bound to Surfaces	156
H Self-diffusion in Molecular Crystals	157
I Ferroelectric Phase Transitions	159
7 Pulsed N.M.R. in Solids	161
A Application of Multiple-pulse Experiments to Linenarrowing in Solids	161
B Application of Multiple-pulse Experiments to the Study of Molecular Motion	164
C Pulsed Double Nuclear Magnetic Resonance Experiments	165

Chapter 4 Experimental Techniques

By D. G. Gillies

1 Introduction	169
2 The Magnet	170
A Permanent Magnets	170
B Electromagnets	170
C Superconducting Magnets	170
D Control of Homogeneity	170
E Stability	171
3 Sensitivity	171
4 Frequency Generation	171
A Single Resonance	171
B Double Resonance	174
Homonuclear	174
Heteronuclear	175
Noise	175
Universal Shift Reference	176

5 The Probe	176
A Single-coil Systems	176
B Crossed-coil Systems	177
C Double Resonance	178
D Field-Frequency Lock	178
E General Construction	178
F Field Modulation	179
G Variable-temperature Operation	179
H Rapid Sample Spinning	180
6 The Preamplifier	180
7 The Receiver	180
8 Modulation Schemes	182
9 Computer Techniques	184
10 Pulsed Spectrometers	185
11 Measurement of Relaxation Times	188
A Values of T_1	188
C.W. Methods	188
Pulse Methods	189
B Values of T_2	190
C.W. Methods	190
Pulse Methods	190
12 Miscellaneous Topics	190
A Stochastic Resonance	190
B Fourier Difference Spectroscopy	190

Chapter 5 Spectral Analysis

By R. G. Jones

1 New Spin Systems Studied	191
Analysis of N.M.R. Spectra of the Type $[AMX]_2$ with $J(XX') = 0$	191
2 New Methods of Tackling Known Spin Systems	195
A Superoperator Direct Method Least-squares Analysis of N.M.R. Spectra	195
B A Systematic Approach to the $[AB]_2$, $[AB]_2MX$, and Derived Systems	196

C Use of Double Quantum Transitions	198
Double Resonance: Perturbation of Double Quantum Transitions	198
Effect of Double Irradiation (Tickling) of Single Quantum Transitions or Double Quantum Transitions in Systems Simplified by Double Resonance	199
3 Studies of Known Spin Systems	200
A Systems involving Protons Only	200
Aliphatic Systems	200
Olefinic Systems	200
Heterocyclic Systems	202
Aromatic Systems	202
B Compounds containing Fluorine	203
2,2'-, 3,3'-, and 4,4'-Dihalogenobiphenyl Compounds ABCD, ABCDX	203
Pyridine Compounds	204
Pentafluorophenol, (AM) ₂ X	204
Benzene, Naphthalene, Phenanthrene, and Biphenyl Compounds	204
Tetrafluorodichlorocyclopropanes, [AX] ₂ , A ₄	204
1,1,2,2-Tetrafluoroethane [AMX] ₂	205
C Compounds containing Phosphorus	205
Bis(dialkylphosphines)	205
The [AMX _{1.8}] ₂ System	206
Tri-(3-furyl)phosphine, ABCX	206
1-Phospha-2,6-dioxacyclohexanes	206
1-Phospha-2,5-dioxa(diaza, dithia)cyclopentanes	207
Bis-(5,5-dimethyl-1-phospha-2-oxo-6-thionocyclohexane)	208
D Organometallic Compounds	208
Triphenyl Group IV Element Lithium Compounds, [AB] ₂ C	208
Allenic Derivatives of Tin, Lead, and Mercury AB ₂ X	208
Cycloheptatrienyl Manganese Tricarbonyl Compounds, A[BCXY] ₂ , ABCDEXYZ	208
Aryl Derivatives of Mercury, [AB] ₂ C, [AB] ₂ X, [AB] ₂	209
4 General Comments	209
Books and Reviews	209
Computer Programs	210

Chapter 6 Bandshape Phenomena for Fluids*By R. K. Harris*

1 General Introduction	211
A Current Developments	211
B Coverage of the Report	212
C Nomenclature, Notation, and Units	213
D Reviews and Symposia	214
2 Experimental Features	215
Miscellaneous	218
3 Exchange of Magnetic Sites	218
A Theoretical Work	218
B Examples of Intramolecular Exchange	226
Hindered Internal Rotation	226
Nitrogen Inversion	230
Ring Inversion	231
Phosphorus-containing Compounds	233
Metal Complexes	236
C Examples of Intermolecular Exchange	237
Studies of Ligand Exchange (The Swift-Connick Approach)	238
Other Studies of Intermolecular Exchange	240
4 Effects of Quadrupolar Nuclei	242
A Theoretical Work	242
B Resonance of Spin- $\frac{1}{2}$ nuclei Coupled to Quadrupolar Nuclei	245
C N.M.R. Spectra of Quadrupolar Nuclei	246
Nitrogen	246
Other Nuclei	247
D Effects of Magnetic Site Exchange on N.M.R. Spectra for Spin Systems containing Quadrupolar Nuclei	248
5 Relaxation Effects — Linewidths	250
A Theoretical Work	250
B Paramagnetic Effects	251
C Gas-phase Studies	252
D Miscellaneous Width Studies	253
6 Relaxation Effects—Saturation	253
7 Bandshapes in Multiple Resonance	254
Cases including Exchange	255

Chapter 7 Multiple Resonance*By D. Shaw*

1 Introduction	257
2 Theory of Multiple Resonance	257
3 Double Resonance in the Presence of Chemical Exchange	260
4 Chemical Applications of Multiple-resonance Techniques	262
Spin Decoupling	262
Generalized Overhauser Effect	264
INDOR	264
Nuclear Overhauser Effect (NOE)	265
Transient Phenomena	266
5 Relaxation Effects in Multiple Resonance	267
Relaxation in the Presence of Incoherent Decoupling	267
Overhauser Studies	268
6 Conclusion	271

Chapter 8 Macromolecules and Solids*By E. G. Finer*

1 Introduction	273
2 N.M.R. Studies of Macromolecules	273
A Lipid–Water and Soap–Water Systems	273
Pulse and Wide-line Methods	273
High-resolution Methods	276
B Polyamino-acids, Peptides, and Proteins	278
Proton Studies	278
¹³ C Studies	282
¹⁹ F Studies	283
C Synthetic Polymers	283
D Other Macromolecules	285
3 N.M.R. Studies of Solids	286
4 N.M.R. Studies of Small Molecules Interacting with Macromolecules or Solids	289
A Bound Water	289
B Bound Ions	292
C Other Small Molecules	293

Chapter 9 Medium Effects*By M. I. Foreman*

1 Introduction	295
2 Hydrogen-bonding Effects	295
A Proton Shifts	295
B Heteronuclear Shifts	297
3 Ions in Solution	300
4 Aromatic Solvent-induced Shifts (ASIS Effects)	303
5 N.M.R. Shift Reagents	310
A Cobalt(II) and Nickel(II) Complexes	310
B Lanthanide Metal Complexes	315

Chapter 10 Oriented Molecules*By P. Diehl and P. M. Henrichs*

1 Introduction	321
2 Structure Determination	321
3 Orientation Parameters	324
4 Anisotropies in Indirect Couplings	326
5 Anisotropies of Chemical Shifts	327
6 Relaxation	329
7 Determination of Nuclear Quadrupole Coupling Constants	330
8 The Structure of the Liquid Crystal Phase	331
9 Miscellaneous	332
