

Preface

The format adopted in previous volumes of this series is continued in the present collection of reports on various aspects of NMR. The literature appearing between June 1992 and May 1993 forms the basis of the contributions contained herein. As usual the procedures employed are somewhat procrustean; this arises mainly from the requirement of covering an ever expanding volume of literature in a rather restricted volume size. Nonetheless the reports presented redound to the credit of the authors.

It gives me very great pleasure to welcome to the team of reporters two married couples. Drs. J. Fisher and J. Arnold are reporting on Natural Macromolecules, and Drs. J. Barber and B. Wood are covering conformational analysis. I am also delighted to have Drs. M. Yamaguchi and M. Prior as new members of the group of reporters. Unfortunately the reporter dealing with Heterogeneous Systems has been unable to fulfil his commission on time; thus this report will be held over to Volume 24. I would like to extend my thanks to Dr. K.D.M. Harris, who is retiring from the reporting team, for his contribution to this series. In addition I would like to take this opportunity to thank all of the other reporters for their continued hard work which forms the bed rock of the success of the present series of Specialist Periodical Reports.
