# Preface

**G.A Webb**

**DOI: 10.1039/b719474a**

It is my great pleasure to introduce Volume 37 of the *SPR on NMR*. Like its predecessors the current volume aims to provide comprehensive coverage of the NMR literature. In the present case, the relevant literature appearing between June 2006 and May 2007.

Compared to earlier volumes in the series there are three apparent omissions in this one. The first concerns the chapter on Multiple Resonance which has appeared regularly for many years. It is considered that due to various changes in the extent of coverage in other chapters a separate account of multiple resonance is no longer required. The other two omissions relate to the accounts of Liquid Crystals and Micellar Solutions and that on NMR Imaging. Unfortunately due to personal problems, the reporters for these chapters are unable to fulfil their commissions this year. It is proposed to include a two year coverage of these research areas in Volume 38.

There have been two changes in the membership of the reporting team during the past year. T. Kameda has replaced N. Asakawa as a member of the group reporting on Applications of Nuclear Shielding, and the chapter NMR of Proteins and Nucleic Acids is presented by P. J. Simpson. I offer a very warm welcome to these recent additions to the reporting team and offer them, and the more established reporters, my sincere thanks for their support of this series and for a job well done.
