Chapter 1 Theoretical Organometallic Chemistry

By A.J. Bridgeman

- 1 Introduction
- 2 s- and p-Block Metals
 - 2.1 Structural and Spectroscopic Studies
 - 2.2 Mechanistic Studies
- 3 d- and f-Block Metals
 - 3.1 Structural and Spectroscopic Studies
 - 3.2 Mechanistic Studies

References

Chapter 2 Groups 1 and 11: The Alkali and Coinage Metals

By S.R. Boss and A.E.H. Wheatley

- 1 Alkali Metals
 - 1.1 Introduction
 - 1.2 Alkyl Derivatives
 - 1.3 Alkenyl, Allyl, Vinyl, Alkynyl and Related Derivatives
 - 1.4 Aryl Derivatives
 - 1.5 Cyclopentadienyl and Related Derivatives
- 2 Copper, Silver and Gold
 - 2.1 Introduction
 - 2.2 Copper Compounds
 - 2.3 Silver Compounds
 - 2.4 Gold Compounds

References

Chapter 3 Group 2 (Be–Ba) and Group 12 (Zn–Hg)

By Christopher M. Pask and Dominic S. Wright

- 1 Scope and Organisation of the Review
- 2 Group 2
- 3 Group 12

References

Chapter 4 Scandium, Yttrium and the Lanthanides

By John G. Brennan and Andrea Sella

- 1 Introduction
- 2 New Compounds – Structure and Reactivity

- 2.1 Cyclopentadienyl (Cp) and Lightly Substituted Cp Compounds
 - 2.2 Cp* and Related Per-substituted Ancillaries
 - 2.3 Functionalized Cp Ligands
 - 2.4 Linked and Ansa-Cp Ligands
 - 2.5 Indenyl and Fluorenyl Ancillaries
 - 2.6 Heterocyclic Ancillaries
 - 2.7 Amido and other Nitrogen-based Supports
 - 2.8 Carborane and other Boron-containing Ligands
 - 2.9 Aluminates
 - 2.10 Other Ancillaries
 - 3 Theoretical Studies
 - 4 Gas Phase Chemistry
 - 5 Polymerization Catalysis
 - 5.1 Olefin Polymerization
 - 5.2 Butadiene
 - 5.3 Acrylates
 - 5.4 Polar Monomers
 - 6 Applications in Organic Synthesis
- References

Chapter 5 Carboranes, Including Their Metal Complexes

By Paul A. Jelliss

- 1 Introduction
 - 2 Theoretical and Computational Studies
 - 3 Carboranes
 - 3.1 {CB₈} and {CB₉}
 - 3.2 {CB₁₀}
 - 3.3 {CB₁₁}
 - 3.4 {C₂B₃}
 - 3.5 {C₂B₇}
 - 3.6 {C₂B₈}
 - 3.7 {C₂B₉}
 - 3.8 {C₂B₁₀}
 - 3.9 {C₃B₃} and {C₄B₂}
 - 4 Metallocarboranes
 - 4.1 {MCB₁₀}
 - 4.2 {*exo*-MCB₁₁}
 - 4.3 {MC₂B₄}
 - 4.4 {MC₂B₈}
 - 4.5 {MC₂B₉}
 - 4.6 {MC₂B₁₀}
 - 4.7 {*exo*-MC₂B₁₀}
 - 5 Biological Carborane Chemistry and BNCT
 - 6 Crystal Engineered Supramolecular and Polymeric (Metalla)carborane Materials
- References

Chapter 6 Group III – B, Al, Ga, In and Tl

By Simon Aldridge

- 1 General
 - 2 Boron
 - 2.1 $B(C_6F_5)_3$ and Related Boranes
 - 2.2 Borate Anions
 - 2.3 Boron Hydrides
 - 2.4 Boratabenzenes and Related Systems
 - 2.5 Boron-containing Materials
 - 2.6 Boron-based Sensors
 - 2.7 Boron-based Ligand Systems
 - 2.8 Boronic Acids and Suzuki Type Coupling Reactions
 - 2.9 Diboron(4) Reagents
 - 2.10 Borane Functionalized Cyclopentadienyl Ligands
 - 2.11 Miscellaneous
 - 3 Aluminium
 - 3.1 Sub-valent Aluminium and Aluminium Clusters
 - 3.2 Aluminoxanes, MAO Models and Aluminium in Olefin Polymerization
 - 3.3 Aluminium Derivatives Containing Bonds to Group 15 Elements
 - 3.4 Aluminium Derivatives Containing Bonds to Group 16 Elements
 - 3.5 Aluminium Organometallics in Organic Synthesis
 - 3.6 Miscellaneous Examples
 - 4 Gallium
 - 4.1 Sub-valent Gallium Species and Clusters
 - 4.2 Complexes Containing Subvalent Gallium Species as Ligands
 - 4.3 Gallium Derivatives Containing Bonds to Group 15 Elements
 - 4.4 Gallium Derivatives Containing Bonds to Group 16 Elements
 - 4.5 Gallium Hydrides
 - 4.6 Miscellaneous
 - 5 Indium
 - 5.1 Subvalent Indium and Indium Clusters
 - 5.2 Indium Derivatives Containing Bonds to Groups 15 or 16
 - 5.3 Indium Organometallics in Organic Synthesis
 - 5.4 Miscellaneous Examples
 - 6 Thallium
- References

Chapter 7 Group 14: Silicon, Germanium, Tin and Lead

By Richard A. Layfield

- 1 Overview
 - 2 Silylenes
 - 3 Germylenes, Stannylenes and Plumbylenes
 - 4 Multiple Bonds to Main Group Elements
 - 5 Homoaromatics and Related Compounds
 - 6 π -Bonded Compounds
 - 7 Transition and Main Group Metal Complexes
- References

Chapter 8 Group 15: Phosphorus, Arsenic, Antimony and Bismuth

By Matthew D. Francis

- 1 Phosphorus
- 2 Arsenic
- 3 Antimony
- 4 Bismuth

References

Chapter 9 Organo-Transition Metal Cluster Complexes

By Mark G. Humphrey and Marie P. Cifuentes

- 1 Introduction
- 2 General Reviews
- 3 Spectroscopic Studies
- 4 Theory
- 5 Structural Studies
- 6 Large Clusters
 - 6.1 Homonuclear High-nuclearity Clusters
 - 6.2 Heteronuclear High-nuclearity Clusters
- 7 Group 6
- 8 Group 7
 - 8.1 Rhenium
- 9 Group 8
 - 9.1 Iron
 - 9.2 Ruthenium
 - 9.3 Osmium
 - 9.4 Mixed-metal Clusters Containing Only Group 8 Metals
- 10 Group 9
 - 10.1 Cobalt
 - 10.2 Rhodium
 - 10.3 Iridium
 - 10.4 Group 9 Mixed Metal Clusters
 - 10.5 Group 9 Clusters as Catalysts
- 11 Group 10
 - 11.1 Nickel
 - 11.2 Palladium
 - 11.3 Platinum
- 12 Group 11

	12.1	Copper
	12.2	Silver
	12.3	Gold
13		Group 12
	13.1	Mercury
14		Mixed Metal Clusters
	14.1	Group 5
	14.2	Group 6
	14.3	Group 7
	14.4	Group 8
	14.5	Group 9
	14.6	Group 10
	14.7	Group 11
	14.8	Clusters Containing Three Different Metals

Chapter 10 Complexes Containing Metal–Carbon σ -Bonds of the Groups Iron, Cobalt and Nickel, Including Carbenes and Carbynes

By Philip J. King

1		Introduction
2		Reviews and Articles of General Interest
3		Metal–Carbon σ -Bonds Involving Group 8, 9 and 10 Metals
	3.1	The Iron Triad
	3.2	The Cobalt Triad
	3.3	The Nickel Triad
4		Carbene and Carbyne Complexes of Groups 8, 9 and 10
		References

Chapter 11 Reactions of Transition Metal π -Complexes of Alkenes, Alkynes and Dienes

By Gregory A. Solan

1		Introduction
2		Reviews
3		Complexes Containing π -Coordinated Alkenes
	3.1	Well-defined π -Coordinated Alkenes
	3.2	π -Coordinated Alkenes Generated In-situ
4		Complexes Containing π -Coordinated Alkynes
	4.2	π -Coordinated Alkynes Generated In-situ
5		Complexes Containing π -Coordinated Dienes (Chain and Cyclic)
	5.1	Well-defined π -Coordinated Conjugated Dienes
	5.2	Well-defined π -Coordinated Non-conjugated Dienes
	5.3	π -Coordinated Dienes Generated In-situ
6		Bimetallic Complexes Containing π -Coordinated Alkenes, Alkynes or Dienes
	6.1	Homobimetallic
	6.2	Heterobimetallic

Chapter 12 Transition Metal Complexes of Cyclopentadienyl Ligands

By Ian R. Butler

- 1 General Introduction
- 2 Main Group, Lanthanides and Actinides
- 3 Titanium, Zirconium and Hafnium
- 4 Vanadium, Niobium and Tantalum
- 5 Chromium, Molybdenum and Tungsten
- 6 Manganese, Rhenium and Technetium
- 7 Iron, Ruthenium and Osmium
 - 7.1 General Ferrocene and Synthetic Chemistry
 - 7.2 Electrochemistry
 - 7.3 Polymer Chemistry
 - 7.4 Schiff Bases Ligand/Complexes
 - 7.5 NMR
 - 7.6 Materials Chemistry
 - 7.7 Liquid Crystals
 - 7.8 Complexes/Coordination
 - 7.9 Carbon-based Structures
 - 7.10 Dppf as a Ligand
 - 7.11 Theoretical
 - 7.12 Miscellaneous Ferrocene Chemistry
- 8 Cobalt
- 9 Nickel

Chapter 13 Organic Aspects of Organometallic Chemistry

By Steven D. R. Christie and Jon J. Shotton

- 1 Introduction
- 2 Methods for C–C Bond Formation
- 3 Methods for C–X Bond Formation
- 4 Metathesis Reactions
- 5 Metal Mediated Cyclisation and Cycloisomerisation Reactions
- 6 Metal Mediated Cycloadditions
- 7 Pauson–Khand Type Reactions
- 8 Nicholas Reactions
