<b>PART I</b>	<b>PHYSICAL ASPECTS OF PHOTOCHEMISTRY</b>	
	<b>Photophysical Processes in Condensed Phases</b>	<b>3</b>
	<i>By R.B. Cundall</i>	
1	General	
2	Singlet State Processes	7
2.1	Electron-Transfer Processes and Exciplexes	10
2.2	Dyes and Related Systems	13
2.3	Photoisomerization and Related Processes	15
2.4	Electron Excitation Energy Transfer	16
2.5	Polymeric Systems	18
2.6	Colloidal and Heterogeneous Systems	19
3	Triplet State Processes	21
4	Other Chemical Systems	29
5	Biological Systems	31
	References	
<b>PART II</b>	<b>PHOTOCHEMISTRY OF INORGANIC AND ORGANOMETALLIC COMPOUNDS</b>	
<b>Chapter 1</b>	<b>The Photochemistry of Transition-metal complexes</b>	<b>57</b>
	<i>By A. Cox</i>	
1	Introduction	57
2	Titanium	57
3	Vandium and Niobium	58
4	Chromium, Molybdenum, and Tungsten	59
5	Rhenium	63
6	Iron	65
7	Ruthenium	67
8	Osmium	75
9	Cobalt	76

10	Rhodium	77
11	Iridium	78
12	Nickel	79
14	Copper	82
15	Lanthanides	84
16	Uranium	86
17	Actinides	87
18	Miscellaneous	88
	References	89
<b>Chapter 2</b>	<b>The Photochemistry of Transition-metal Organometallic Compounds</b>	<b>108</b>
	<i>By A. Cox</i>	
1	Introduction	108
2	Titanium	108
3	Tantalum	108
4	Chromium, Molybdenum, and Tungsten	109
5	Manganese and Rhenium	114
6	Iron	116
7	Ruthenium	122
8	Osmium	123
9	Cobalt	124
10	Rhodium and Iridium	125
11	Nickel	127
12	Palladium and Platinum	127
13	Copper	128
14	Miscellaneous	128
	References	129
<b>Chapter 3</b>	<b>The Photochemistry of Compounds of the Main Group Elements</b>	<b>139</b>
	<i>By A. Cox</i>	

1	Introduction	139
2	Aluminium and Indium	139
3	Silicon, Germanium, and Tin	139
4	Nitrogen and Phosphorus	141
5	Oxygen and Sulphur	143
6	Halogens	143
7	Miscellaneous	144
	References	145
 <b>PART III ORGANIC ASPECTS OF PHOTOCHEMISTRY</b>		
<b>Chapter 1</b>	<b>Photolysis of Carbonyl Compounds</b>	<b>151</b>
	<i>By W.M. Horspool</i>	
1	Norrish Type I Reactions	151
2	Norrish Type II Reactions	157
3	Oxetan Formation	159
4	Miscellaneous Reactions	162
	References	165
<b>Chapter 2</b>	<b>Enone Cycloadditions and Rearrangements: Photoreactions of Dienones and Quinones</b>	<b>168</b>
	<i>By W.M. Horspool</i>	
1	Cycloaddition Reactions	168
	Intramolecular	168
	Intermolecular	174
	Dimerization	180
2	Rearrangement Reactions	182
	$\alpha, \beta$ -Unsaturated Systems	182
	$\beta, \gamma$ -Unsaturated Systems	188
	$\delta, \epsilon$ -Unsaturated Systems	197
3	Photoreactions of Thymines and Related Compounds	197
4	Photochemistry of Dienones	203
	Linearly Conjugated Dienones	203
	Cross-conjugated Dienones	203
5	1,2-, 1,3-, and 1,4-Diketones	206
6	Quinones	217
	References	222

<b>Chapter 3</b>	<b>Photochemistry of Alkenes, Alkynes, and Related Compounds</b>	<b>229</b>
	<i>By W.M. Horspool</i>	
1	Reactions of Alkenes	229
	Addition Reactions	229
	<i>cis-trans</i> Isomerization	229
	Group Migration and Hydrogen Abstraction Reactions	231
	Miscellaneous Reactions	233
2	Reactions Involving Cyclopropane Rings	235
3	Reactions of Dienes, Trienes, and Higher Polyenes	240
4	(2+2) Intramolecular Additions	242
5	Dimerization and Intermolecular Additions	247
6	Miscellaneous Reactions	250
	References	253
<b>Chapter 4</b>	<b>Photochemistry of Aromatic Compounds</b>	<b>258</b>
	<i>By A.C. Weedon</i>	
	Introduction	258
1	Isomerisation Reactions	258
2	Addition Reactions	266
3	Substitution Reactions	284
4	Intramolecular Cyclisation Reactions	298
5	Dimerisation Reactions	308
6	Lateral Nuclear Rearrangements	319
7	Peripheral Photochemistry	326
	References	335
<b>Chapter 5</b>	<b>Photo-reduction and -oxidation</b>	<b>341</b>
	<i>By A. Cox</i>	
1	Introduction	341
2	Reduction of Carbonyl Groups	341
3	Reduction of Nitrogen-containing Compounds	346
4	Miscellaneous Reductions	350

<i>Contents</i>		xvii
5	Singlet Oxygen	350
6	Oxidation of Aliphatics	351
7	Oxidation of Aromatic Compounds	354
8	Oxidation of Nitrogen-containing Compounds	357
9	Miscellaneous Oxidations	359
	References	359
<b>Chapter 6</b>	<b>Photoreactions of Compounds containing Heteroatoms other than Oxygen</b>	<b>370</b>
	<i>By S.T. Reid</i>	
1	Nitrogen-containing compounds	370
	Rearrangements	370
	Addition Reactions	388
	Miscellaneous Reactions	396
2	Sulphur-containing Compounds	399
3	Compounds containing other Heteroatoms	407
	References	416
<b>Chapter 7</b>	<b>Photoelimination</b>	<b>421</b>
	<i>By S.T. Reid</i>	
1	Elimination of Nitrogen from Azo-compounds	421
2	Elimination of Nitrogen from Diazo-compounds	429
3	Elimination of Nitrogen from Azides	434
4	Photoelimination of Carbon Dioxide	443
5	Fragmentation of Organosulphur Compounds	443
6	Miscellaneous Decomposition and Elimination Reactions	446
	References	453
<b>PART IV</b>	<b>POLYMER PHOTOCHEMISTRY</b>	<b>459</b>
	<i>By N.S. Allen</i>	
1	Introduction	459
2	Photopolymerisation	459
	2.1 Photoinitiated Addition Polymerisation	460
	2.2 Photografting	469

2.3	Photocrosslinking	470
3	Optical and Luminescence Properties of Polymers	474
4	Photodegradation and Photooxidation Processes	482
4.1	Polyolefins	483
4.2	Polystyrenes	483
4.3	Polyamides	484
4.4	Elastomers/Rubbers	484
4.5	Polyurethanes	485
4.6	Polyacrylates	485
4.7	Poly(vinylhalides)	485
4.8	Polyesters	487
4.9	Natural Polymers	487
4.10	Miscellaneous Polymers	489
5	Photostabilisation Processes	489
6	Photochemistry of Dyed and Pigmented Polymers	492
	References	495
<b>PART V</b>	<b>PHOTOCHEMICAL ASPECTS OF SOLAR ENERGY CONVERSION</b>	<b>509</b>
	<i>By A. Harriman</i>	
1	Introduction	509
2	Photoredox Reactions	511
3	Homogeneous Photosystems	514
	Valence Isomerism	514
	Hydrogen Production	515
	Related Reduction Processes	518
	Oxygen Evolving Photosystems	520
	Related Oxidation Processes	522
4	Heterogeneous Photosystems	522
	Titania	522
	Titariates and other Oxides	527
	Sulphides and Selenides	528
	Miscellaneous Semiconductors	530
5	Photoelectrochemical Cells	531
6	Luminescence Solar Concentrators	534
	References	535
