<b>PART I</b>	<b>PHYSICAL ASPECTS OF PHOTOCHEMISTRY</b>	
	<b>Photophysical Processes in Condensed Phases</b>	<b>3</b>
	<i>By R.B. Cundall</i>	
1	General	3
2	Singlet Processes	10
2.1	Electron and Proton Transfer Reactions and Exciplexes	15
2.2	Dyes	18
2.3	Photoisomerization and Related Processes	21
2.4	Electronic Excitation Energy Transfer	23
2.5	Polymeric Systems	26
2.6	Colloidal and Heterogeneous Systems	27
3	Triplet State Processes	30
4	Other Processes	37
4.1	Chemiluminescence	37
4.2	Photochromism	38
4.3	Photochemical Reactions	38
	References	41
<b>PART II</b>	<b>ORGANIC ASPECTS OF PHOTOCHEMISTRY</b>	
<b>Chapter 1</b>	<b>Photolysis of Carbonyl Compounds</b>	<b>59</b>
	<i>By W.M. Horspool</i>	
1	Norrish Type I Reactions	59
2	Norrish Type II Reactions	68
3	Oxetan Formation	73
4	Miscellaneous Reactions	80
	References	91

<b>Chapter 2</b>	<b>Enone Cycloadditions and Rearrangements: Photoreactions of Dienones and Quinones</b>	<b>96</b>
	<i>By W.M. Horspool</i>	
1	Cycloaddition Reaction	96
	Intermolecular	96
	Intramolecular	108
2	Rearrangement Reactions	115
	$\alpha$ , $\beta$ -Unsaturated Systems	115
	$\beta$ , $\gamma$ -Unsaturated Systems	124
3	Photoreactions of Thymines, etc.	133
4	Photochemistry of Dienones	135
	Cross-conjugated Dienones	135
	Linearly Conjugated Dienones	137
5	1,2-, 1,3-, and 1,4-Diketones	139
6	Quinones	153
	References	161
<b>Chapter 3</b>	<b>Photochemistry of Alkenes, Alkynes, and Related Compounds</b>	<b>169</b>
	<i>By W.M. Horspool</i>	
1	Reactions of Alkenes	169
	<i>cis-trans</i> Isomerization	169
	Hydrogen Abstraction Reactions	172
	Addition Reactions	172
	Rearrangement Reactions	174
	Halogenated Alkenes	176
2	Reactions involving Cyclopropane Rings	178
3	Reactions of Dienes, Trienes, and Higher Polyenes	190
4	[2+2] Intramolecular Additions	200
5	Dimerization and Intermolecular Additions	202
6	Miscellaneous Reactions	204
	References	212

<b>Chapter 4</b>	<b>Photochemistry of Aromatic Compounds</b>	<b>221</b>
	<i>By A.C. Weedon</i>	
	Introduction	221
1	Isomerization Reactions	222
2	Addition Reactions	226
3	Substitution Reactions	239
4	Intramolecular Cyclization Reactions	250
5	Dimerization Reactions	260
6	Lateral Nuclear Rearrangements	266
7	Peripheral Photochemistry	272
	References	281
<b>Chapter 5</b>	<b>Photo-reduction and -oxidation</b>	<b>295</b>
	<i>By A. Cox</i>	
1	Introduction	295
2	Reduction of the Carbonyl Groups	295
3	Reduction of Nitrogen-containing Compounds	300
4	Miscellaneous Reductions	302
5	Singlet Oxygen	303
6	Oxidation of Aliphatic Compounds	304
7	Oxidation of Aromatic Compounds	309
8	Oxidation of Nitrogen-containing Compounds	313
9	Miscellaneous Oxidations	315
	References	316
<b>Chapter 6</b>	<b>Photoreactions of Compounds Containing Heteroatoms Other than Oxygen</b>	<b>329</b>
	<i>By S.T. Reid</i>	
1	Nitrogen-containing Compounds	329
	Rearrangements	329
	Addition Reactions	347
	Miscellaneous Reactions	355
2	Sulphur-containing Compounds	355
3	Compounds Containing Other Heteroatoms	360
	References	368

<b>Chapter 7</b>	<b>Photoelimination</b>	<b>375</b>
	<i>By S.T. Reid</i>	
1	Elimination of Nitrogen from Azo-compounds	375
2	Elimination of Nitrogen from Diazo-compounds	380
3	Elimination of Nitrogen from Azides	388
4	Photoelimination of Carbon Dioxide	394
5	Fragmentation of Organosulphur Compounds	395
6	Miscellaneous Decomposition and Elimination Reactions	398
	References	402
<b>PART III</b>	<b>POLYMER PHOTOCHEMISTRY</b>	<b>411</b>
	<i>By N.S. Allen and M. Edge</i>	
1	Introduction	411
2	Photopolymerization	411
2.1	Photoinitiated Addition Polymerization	413
2.2	Photografting	432
2.3	Photocrosslinking	433
3	Optical and Luminescence Properties of Polymers	443
4	Photodegradation and Photooxidation of Polymers	460
4.1	Polyolefins	461
4.2	Polyvinylhalides	462
4.3	Polystyrenes	464
4.4	Polyacrylates	467
4.5	Polyesters	468
4.6	Polyamides/Polyimides	469
4.7	Natural Polymers	469
4.8	Polymer Ablation	472
4.9	Miscellaneous Polymers	474
5	Photostabilization of Polymers	476
6	Dyes and Pigments	479
	References	482

<b>PART IV</b>	<b>PHOTOCHEMICAL ASPECTS OF SOLAR ENERGY CONVERSION</b>	505
	<i>By A. Cox</i>	
1	Introduction	505
2	Homogeneous Photosystems	505
3	Heterogeneous Photosystems	507
4	Photoelectrochemical Cells	509
5	Luminescent Solar Concentrators	510
	References	510
<b>AUTHOR INDEX</b>		514
