	Introduction and Review of the Year	1
	<i>By Andrew Gilbert</i>	
Part I	Physical Aspects of Photochemistry	
	Photophysical Processes in Condensed Phases	13
	<i>By Anthony Harriman</i>	
	1 Introduction	13
	2 General Aspects of Photophysical Processes	13
	3 Theoretical and Kinetic Considerations	15
	4 Photophysical Processes in Liquid or Solid Media	18
	4.1 Detection of Single Molecules	18
	4.2 Radiative and Nonradiative Decay Processes	18
	4.3 Amplitude or Torsional Motion	22
	4.4 Photophysics of Fullerenes	23
	4.5 Quenching of Excited States	25
	4.5.1 Energy-transfer Reactions	26
	4.5.2 Electron-transfer Reactions	27
	5 Applications of Photophysics	29
	6 Advances in Instrument Design and Utilization	30
	6.1 Instrumentation	30
	6.2 Data Analysis	32
	<i>References</i>	33
Part II	Organic Aspects of Photochemistry	
Chapter 1	Photolysis of Carbonyl Compounds	59
	<i>By William M. Horspool</i>	
	1 Norrish Type I Reactions	59
	2 Norrish Type II Reactions	61
	2.1 1,5-Hydrogen Transfer	61
	2.2 Other Hydrogen Transfers	62
	3 Oxetane Formation	64

Photochemistry, Volume 30

© The Royal Society of Chemistry, 1999

4	Miscellaneous Reactions	65
4.1	Decarbonylation and Decarboxylation	65
4.2.	Reactions of Miscellaneous Haloketones	70
4.3.	Photo Reactions of Esters and Photodeprotection	71
4.4.	Other Fission Processes	74
	<i>References</i>	75
Chapter 2	Enone Cycloadditions and Rearrangements: Photoreactions of Dienones and Quinones	78
	<i>By William M. Horspool</i>	
1	Cycloaddition Reactions	78
1.1	Intermolecular Cycloaddition	78
1.1.1	Open-chain Systems	78
1.1.2	Additions to Cyclopentenones and Related Systems	82
1.1.3	Additions to Cyclohexenones and Related Systems	83
1.2	Intramolecular Additions	84
1.2.1	Intramolecular Additions to Cyclopentenones	84
1.2.2	Additions to Cyclohexenones and Related Systems	85
2	Rearrangement Reactions	88
2.1	α,β -Unsaturated Systems	88
2.1.1	Hydrogen Abstraction Reactions	88
2.1.2	Radical Addition Reactions	89
2.1.3	Miscellaneous Processes	92
2.2	β,γ -Unsaturated Systems	94
2.2.1	The Oxa Di- π -methane Reaction and Related Processes	94
2.2.2	Miscellaneous Processes	95
3	Photoreactions of Thymines and Related Compounds	97
3.1	Photoreactions of Pyridones	97
3.2	Photoreactions of Thymines <i>etc.</i>	98
4	Photochemistry of Dienones	101
4.1	Cross-conjugated Dienones	101
4.2	Linearly Conjugated Dienones	101
5	1,2-, 1,3- and 1,4-Diketones	103
5.1	Reactions of 1,2-Diketones	103
5.2	Reactions of 1,3-Diketones	105
5.3	Reactions of 1,4-Diketones	106
5.3.1	Phthalimides and Related Compounds	107
5.3.2	Fulgides and Fulgimides	109

6	Quinones	110
6.1	<i>o</i> -Quinones	110
6.2	<i>p</i> -Quinones	110
	<i>References</i>	114
Chapter 3	Photochemistry of Alkenes, Alkynes and Related Compounds	119
	<i>By William M. Horspool</i>	
1	Reactions of Alkenes	119
1.1	<i>cis,trans</i> -Isomerization	119
1.1.1	Stilbenes and Related Compounds	120
1.2	Miscellaneous Reactions	122
1.2.1	Addition Reactions	122
1.2.2	Electron Transfer Processes	123
1.2.3	Other Processes	124
2	Reactions Involving Cyclopropane Rings	126
2.1	The Di- π -methane Rearrangement and Related Processes	126
2.2	Other Reactions Involving Cyclopropane Rings	128
2.2.1	SET Induced Reactions	128
2.2.2	Miscellaneous Reactions Involving Three-membered Ring Compounds	129
3	Reactions of Dienes and Trienes	130
3.1	Vitamin D Analogues	135
4	(2+2)-Intramolecular Additions	137
5	Dimerization and Intermolecular Additions	138
6	Miscellaneous Reactions	141
6.1	Miscellaneous Rearrangements and Bond Fission Processes	141
	<i>References</i>	144
Chapter 4	Photochemistry of Aromatic Compounds	149
	<i>By Alan Cox</i>	
1	Introduction	149
2	Isomerisation Reactions	149
3	Addition Reactions	157
4	Substitution Reactions	163
5	Cyclisation Reactions	166
6	Dimerisation Reactions	171

7	Lateral Nuclear Shifts	173
8	Miscellaneous Photochemistry	174
	<i>References</i>	178
Chapter 5	Photo-reduction and -oxidation	188
	<i>By Alan Cox</i>	
1	Introduction	188
2	Reduction of the Carbonyl Group	188
3	Reduction of Nitrogen-containing Compounds	198
4	Miscellaneous Reductions	202
5	Singlet Oxygen	206
6	Oxidation of Aliphatic Compounds	207
7	Oxidation of Aromatic Compounds	209
8	Oxidation of Nitrogen-containing Compounds	213
9	Miscellaneous Oxidations	219
	<i>References</i>	220
Chapter 6	Photoreactions of Compounds Containing Heteroatoms Other than Oxygen	230
	<i>By Albert C. Pratt</i>	
1	Introduction	230
2	Nitrogen-containing Compounds	230
2.1	<i>E,Z</i> -Isomerisations	230
2.2	Photocyclisations	232
2.3	Photoadditions	241
2.4	Rearrangements	249
2.5	Other Processes	251
3	Sulfur-containing Compounds	265
4	Compounds Containing Other Heteroatoms	277
4.1	Silicon and Germanium	277
4.2	Phosphorus	282
4.3	Other Elements	284
	<i>References</i>	285
Chapter 7	Photoelimination	296
	<i>By Ian R. Dunkin</i>	
1	Introduction	296

2	Elimination of Nitrogen from Azo Compounds and Analogues	296
3	Elimination of Nitrogen from Diazo Compounds and Diazirines	298
3.1	Generation of Alkyl and Alicyclic Carbenes	298
3.2	Generation of Aryl Carbenes	300
3.3	Photolysis of α -Diazo Carbonyl Compounds	302
4	Elimination of Nitrogen from Azides and Related Compounds	302
4.1	Aryl Azides	303
4.2	Heteroaryl Azides	305
5	Photoelimination of Carbon Monoxide and Carbon Dioxide	305
5.1	Photoelimination of CO and CO ₂ from Organometallic Compounds	306
6	Photoelimination of NO and NO ₂	310
7	Miscellaneous Photoeliminations and Photofragmentations	312
7.1	Photoelimination from Hydrocarbons	312
7.2	Photoeliminations from Organohalogen Compounds	313
7.3	Photofragmentations of Organosilicon and Organogermanium Compounds	316
7.4	Photofragmentations of Organosulfur and Organoselenium Compounds	317
7.5	Photolysis of <i>o</i> -Nitrobenzyl Derivatives	318
7.6	Other Photofragmentations	320
	<i>References</i>	322
Part III	Polymer Photochemistry	331
	<i>By Norman S. Allen</i>	
1	Introduction	331
2	Photopolymerisation	331
2.1	Photoinitiated Addition Polymerisation	332
2.2	Photocrosslinking	336
2.3	Photografting	341
3	Luminescence and Optical Properties	342
4	Photodegradation and Photooxidation Processes in Polymers	354
4.1	Polyolefins	354
4.2	Poly(vinyl halides)	355
4.3	Poly(acrylates) and (alkyl acrylates)	355
4.4	Polyamides and Polyimides	355
4.5	Poly(alkyl and aromatic ethers)	356

4.6	Polyesters	358
4.7	Silicone Polymers	358
4.8	Polystyrenes and Copolymers	358
4.9	Polyurethanes and Rubbers	359
4.10	Photoablation of Polymers	360
4.11	Natural Polymers	361
4.12	Miscellaneous Polymers	361
5	Photostabilisation of Polymers	362
6	Photochemistry of Dyed and Pigmented Polymers	363
	<i>References</i>	363
Part IV	Photochemical Aspects of Solar Energy Conversion	389
	<i>By Alan Cox</i>	
1	Introduction	389
2	Homogeneous Photosystems	389
3	Heterogeneous Photosystems	391
4	Photoelectrochemical Cells	393
5	Biological Systems	394
	<i>References</i>	395
	Author Index	398
