

Not all chemists wear white coats

This marine chemist may look like she's on holiday on a Caribbean island. In fact she's working. Working to protect endangered species of sea-life. Indeed, the studies she's carrying out may mean the difference between future generations being able to see whales and other animals in our ocean, or having to learn about them from books because they are extinct.

A chemical science qualification can take you a lot further than the Caribbean. It can take you to almost any career you care to mention.

From the media and marketing to food testing and computing - the list is endless.

Chemistry and the chemical sciences can open up a world of possibilities to you - both above and beneath the world's oceans. Find out more about careers using chemistry by writing to The Education Department, Royal Society of Chemistry, Burlington House, Piccadilly, London W1J 0BA or email education@rsc.org
