

The Government Chemist

Third press notice and invitation

REACH and CLP compliance in the construction and vehicle sectors

Free all day event

Heritage Motor Museum, Gaydon, Warwickshire
11:00-15:00, Wednesday 8 February 2012

REACH dossiers, CLP notifications, safety data sheets and high quality regulatory services all have one thing in common - they rely on the effective use of scientific inputs, including sound measurement strategies and complementary techniques. Coherent data sourcing and interpretation have a vital part to play. To offer the widest possible networking opportunities in this field, we bring together scientists and business planners from companies of all sizes, REACH and CLP specialists and regulatory stakeholders.

Funded by the UK National Measurement Office, this event will be hosted at the Heritage Motor Museum by the Government Chemist.

- 1100 **Registration and coffee**
