

Supergen Energy Storage: Progress and the Way Ahead

An invitation to a one-day meeting on
21st August 2008

Peter Hall and Bob Towers

The Department of Chemical Engineering
University of Strathclyde Glasgow G1 1XJ

The Supergen Energy Storage consortium was founded in April 2006 and is due to last until March 2010. The consortium consists brings together the Universities of St Andrews, Strathclyde, Queen's Belfast, Bath and Surrey to work on the development of Li-ion batteries and Supercapacitors for automotive and electrical grid applications with funding from two substantial research grants from EPSRC.

With over 20 researchers, we're the largest research group in electrochemical storage in the UK and one of the largest in Western Europe.

At the mid point of our work we would like to issue a personal invitation to you to attend a one-day meeting in Glasgow. The objectives of our meeting are to make you aware of our research progress and more importantly to discuss future developments of electrochemical energy storage. This will be achieved through short presentations in the morning followed by breakout discussion groups in the afternoon. The discussion groups are your opportunity to influence the research agenda in the UK as we move to our renewal process.

Electrification of the transport system is probably the quickest and easiest method of reducing the CO₂ emissions of the UK and we hope that you will be able to participate in this informative and important event.

Please indicate your interest in participating by replying to this electronic communication to:

p.j.hall@strath.ac.uk or bob.towers@strath.ac.uk

We look forward to welcoming you to Glasgow on 21st August.

Peter and Bob
