

ONE DAY WORKSHOP ON TECHNICAL WRITING

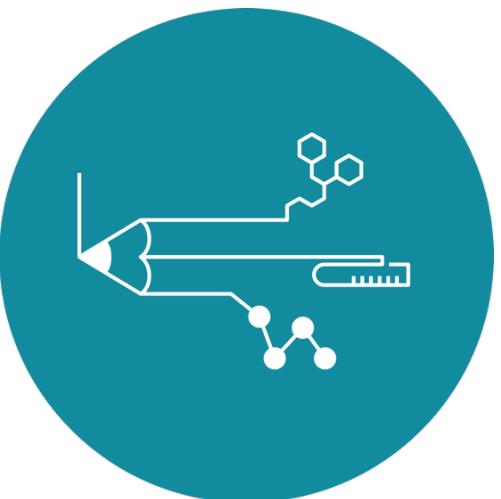

November 21, 2019

Organized by Department of Chemistry, University of Sargodha, Sargodha

Venue: Pharmacy Hall, UoS

A comprehensive, systematic and updated literature survey is a backbone for a high-quality scientific research. A *scientific writing* so called *technical writing* is a systematic knowledge gained based upon and /or derived from observation, deductions, hypotheses, results obtained from experimentation. The art of publishing good quality scientific articles comes with practice and by studying good examples and models. A range of scientific writings such as original research article, review article, short communication, synopsis, technical report, thesis, patent, monograph, book (edited book, text book and proceedings) etc. have been reported. The present training workshop focuses on the significance and usefulness of literature survey relating to designing a sound research proposal and thereby successful accomplishment of the research work planned. Furthermore, an overview of different types of literature sources and scientific writings is presented. The detailed design and composition of original research article and review articles is explicated. Important tips for preparation of a well-designed manuscript and its fruitful outcomes in the form of good impact publication are also presented. The ethics of scientific writings along with other related issues such as *plagiarism* is also covered.

Focused Areas:
