

H-index ranking of living chemists

This list of living chemists has been compiled by Henry Schaefer, of the University of Georgia, US, together with colleague Amy Peterson. The pair assessed the h-index of around 2000 chemists; this list includes those with a score greater than 50.

The h-index was devised by physicist Jorge Hirsch in 2005 to measure research impact. A scientist's h-index is the highest number of papers they have published which have each amassed at least that number of citations: G. M. Whitesides, with an h of 155, has published 155 papers which have each received at least 155 citations, for example.

A full *Chemistry World* news story on the list first appeared here: www.rsc.org/chemistryworld/News/2007/April/23040701.asp

And in the May 2007 edition of Chemistry World magazine.

The latest update is 11 March 2010.
