

P04

Novel and highly selective inhibitors of Fibroblast activation protein (FAP)

- ✓ **FAP:** Serine protease
Target in oncology
Talabostat, failed in phase II trials
- ✓ **Problem to solve:** Talabostat is **not selective** => side effects?
Selective inhibitor needed to validate FAP
as target in oncology and other disease areas
- ✓ **Poster presentation:**

The first selective and potent FAP inhibitor
with drug-like properties!

- ✓ **ADDN:** Antwerp Drug Discovery Network
@ University of Antwerp
=> (Serine) protease research platform
