<i>Nanofood for Thought—Thinking about Nanochemistry, Nanoscience, Nanotechnology and Nanosafety</i>	<b>lii</b>
<b>Chapter 1 Nanochemistry Basics</b>	<b>3</b>
1.1 The Roots of Nanochemistry in Materials Chemistry	3
1.2 Synthesis of Materials and Nanomaterials	5
1.3 Materials Self-Assembly	9
1.4 Big Bang to the Universe	10
1.5 Why Nano?	10
1.6 What Do we Mean by Large and Small Nanomaterials?	11
1.7 Do it Yourself Quantum Mechanics	12
1.8 What is Nanochemistry?	13
1.9 Molecular vs. Materials Self-Assembly	13
1.10 What is Hierarchical Assembly?	14

## **Chapter 6 Nanocrystal Synthesis and Self-Assembly 335**

6.1	Building-Block Assembly	335
6.2	When is a Nanocrystal a Nanocluster or a Nanoparticle?	336
6.3	Synthesis of Capped Semiconductor Nanocrystals	336
6.4	Electrons and Holes in Nanocrystal Boxes	339

6.5	Nanocluster Phase Transformations	342
6.6	Watching Nanocrystals Grow	343
6.7	Nanocrystals in Nanobeakers	345
6.8	Capped Gold Nanocrystals – Nanonugget Rush	346
6.9	At Last a Single Crystal X-Ray Diffraction Structure of a Thiolate Ligand-Capped Gold Nanocluster	348
6.10	Alkanethiolate Capped Nanoclusters Diagnostics	350
6.11	Periodic Table of Capped Nanocrystals	351
6.12	There’s Gold in Them Thar Hills!	352
6.13	Capped Nanocrystal Architectures and Morphologies	353
6.14	Alkanethiolate Capped Silver Nanocrystal Superlattice	353
6.15	Active Plasmonics – Tunable Silver Nanocrystal Superlattices	355
6.16	Crystals of Nanocrystals	357
6.17	Getting Nanocrystal Superlattices to Conduct	358
6.18	Synergy in Nano	360
6.19	What if you Don’t Like Organics?	360
6.20	Beyond Crystals of Nanocrystals – Binary Nanocrystal Superlattices	362
6.21	Capped Magnetic Nanocrystal Superlattice – High Density Data Storage Materials	363
6.22	Soft Lithography of Capped Nanocrystals	364
6.23	Organizing Nanocrystals by Evaporation	365
6.24	Pot of Gold at the Bottom of the Nanofunnel	366
6.25	Electroluminescent Semiconductor Nanocrystals	368
6.26	Full Color Nanocrystal-Polymer Composites	370
6.27	Flipping a Nanocrystal Switch	372
6.28	Photochromic Metal Nanocrystals	373
6.29	Water-Soluble Nanocrystals	374
6.30	Capped Semiconductor Nanocrystal Meets Biomolecule	377
6.31	Hot Nanorods Cure for Cancer	380
6.32	Origin of the Color of Nanoscopic Gold	381
6.33	Nanocrystal DNA Sensors – Besting the Best	383
6.34	Fingering Nanocrystals	385
6.35	DNA-Gold Senses Mercury	387
6.36	Nanocrystal Semiconductor Alloys and Beyond	387
6.37	Alloying Core-Shell Magnetic Nanocrystals	389
6.38	Nanocrystal Grows a Hole	390
6.39	Semiconductor Nanocrystals Extend and Branch Out	391

7.26	Cracking Controversy	466
7.27	Synthesizing a Full Photonic Band Gap	468
7.28	Escape from the Dielectric Microsphere Prison – Bottom-Up and Top-Down Synthesis of Monodispersed Metal Microspheres	469
7.29	Writing Defects	470
7.30	Getting Smart with Planar Defects	472
7.31	Getting Even Smarter with Planar Defects	474
7.32	Switching Light with Light	476
7.33	Thermochromic Colloidal Photonic Crystal Switch	477
7.34	Liquid Crystal Photonic Crystal	477
7.35	Internal Light Sources	480
7.36	Photonic Inks	481
7.37	Full-Color Photonic Crystal Display	482
7.38	Elastically Tunable Photonic Crystals – From Color Fingerprinting to Anti-Counterfeiting	484
7.39	Magnetically Tuneable Photonic Crystals – Magnetic Liquid Color	485
7.40	Electric Field Color Tuned Colloidal Crystal	487
7.41	Color Oscillator	488
7.42	Photonic Crystal Sensors	490
7.43	Colloidal Crystal Chromatography	491

## **Chapter 8 Microporous and Mesoporous Materials from Soft Building Blocks 521**

8.1	Escape from the Zeolite Prison	521
8.2	A Periodic Table of Materials Filled with Holes	522
8.3	Modular Self-Assembly of Microporous Materials	523
8.4	Hydrogen Storage Coordination Frameworks	525
8.5	Crystalline Organic Frameworks, COFs	526
8.6	Overview and Prospects of Microporous Materials	527
8.7	Mesoscale Soft Building Blocks	528

8.8	Mesogrowth – Interfaces and Mesoepitaxy	530
8.9	Mesogrowth and Topological Defects	532
8.10	Mesogrowth and the Micelle <i>vs</i> Liquid Crystal Templating Paradox	534
8.11	Meso-Opals	535
8.12	Mesoporous Materials by Design	538
8.13	Tuning Length Scales	538
8.14	Mesostructure and Dimensionality	540
8.15	Stand Up and Be Counted	541
8.16	Making Mesochannels Stand Up	543
8.17	When It Rains It Pours Vertical Mesochannels	543
8.18	Shock'em to Stand Up – Electrochemically Assisted Assembly of Periodic Mesoporous Silica Film with Orthogonal Channels	545
8.19	Mesomorphology – Spheres, Other Shapes	545
8.20	PMOs Shape Up for High Performance HPLC	548
8.21	Mesomorphology – Morphosynthesis of Curved Form	549
8.22	Mesomorphology – Chiral Mesoporous Silica	551
8.23	Mesomorphology – Patterned Films, Soft Lithography, Micromolding	552
8.24	Mesocomposition – Nature of Precursors	555
8.25	Sidarm Mesofunctionalization	555
8.26	Organics in the Backbone	557
8.27	One-Pot Synthesis of Periodic Mesoporous Polyphenolformaldehyde Materials and Carbon Copies	560
8.28	Mesopore Replication	560
8.29	Plastic Clones of Periodic Mesoporous Silica Shapes	563
8.30	Mesotexture	565
8.31	Nearly Crystalline Pore Walls In Periodic Mesoporous Silica	565
8.32	Guests in Mesopores	568
8.33	Mesoporous Silica Nanoparticles Smart Drug Delivery	569
8.34	Permeating the Impermeable	571
8.35	Capped Nanocrystal Meets Surfactant Mesophase	571
8.36	Marking Time in Mesostructured Silica – New Approach to Optical Data Storage	573
8.37	Periodic Mesoporous Silica–Polymer Hybrids	575
8.38	Mesochemistry – Synthesis in “Intermediate” Dimensions	576
	References	577

## Chapter 9 Self-Assembling Block Copolymers 595

9.1	Polymers, Polymers Everywhere in Nanochemistry	595
9.2	Block Copolymer Self-Assembly – Chip Off the Old Block	595
9.3	Assembling Inorganic Polymers	598
9.4	Block Copolypeptides	598
9.5	Block Copolymer Biofactories	601
9.6	Block Copolymer Thin Films	602
9.7	Electrical Ordering	603
9.8	Spatial Confinement of Block Copolymers	604
9.9	3-D Block Copolymer Spatial Confinement	605
9.10	Nanoepitaxy	607
9.11	Making Micelles	608
9.12	Living Block Copolymers Give Birth to Living Block Copolymer Cylindrical Micelles	611
9.13	Nanoporous Antireflection Coatings Made by Layer-By-Layer Self-Assembly of Block Copolymer Micelles	612
9.14	Supramolecular Assemblies	613
9.15	Supramolecular Mushrooms	616
9.16	Structural Color from Lightscale Block Copolymers	618
9.17	1-D Block Copolymer Spatial Confinement – Hierarchical Bragg Mirrors	619
9.18	Color Tunable Block Copolymer Gel Bragg Mirror	620
9.19	Harnessing Rigid Rods	622
9.20	Nanostructured Ceramics	623
9.21	Nano-objects	624
9.22	Block Copolymer Lithography	626
9.23	Decorating Block Copolymers	627
9.24	A Case of Wettability	628
9.25	Nanowires from Block Copolymers	631
	References	632

## Chapter 10 Biomaterials and Bioinspiration 643

10.1	Nature did it First	643
10.2	To Mimic or to Use?	644
10.3	Faux Fossils	646
10.4	Nature's Siliceous Sculptures	647

10.5	Ancient to Modern Synthetic Morphology	647
10.6	Biomimicry	648
10.7	Biological Lessons in Materials Design	650
10.8	Biom mineralization and Biomimicry Analogies	650
10.9	Morphosynthesis – Inorganic Materials with Complex Form	652
10.10	Morphosynthesis-Echinoderm <i>vs.</i> Block Copolymer	655
10.11	Aluminophosphates Shape Up	656
10.12	Better Bones Through Chemistry	657
10.13	Mineralizing Nanofibers	659
10.14	Mimicking the Mosquito Eye – Synthetic Antifogging Surface	659
10.15	Bioinspiration-Chemically Driven Nanorod Motors	662
10.16	Bioinspiration-Learning from Nature	666
10.17	Bioinspiration-Viral Cage Directed Synthesis of Nanoclusters	667
10.18	Biomaterials – Using Nature for our Own Means	668
10.19	Viruses that Glitter	669
10.20	Polynucleotide Directed Nanocluster Assembly	669
10.21	DNA Coded Nanocluster Chains	671
10.22	Building with DNA	673
10.23	A Smile Written in your DNA	675
10.24	Bacteria Directed Materials Self-Assembly	676
10.25	Using a Virus that is Benign, to Align	678
10.26	Magnetic Spider Silk	680
10.27	Protein S-layer Masks	681
10.28	Fishy Top-Down Photonic Crystals	683
10.29	Polymer Life-Forms	685
10.30	Surface Binding Through Directed Evolution	686
10.31	Nanowire Evolution	688
10.32	Biomolecular Motors – Nanomachines Everywhere	689
10.33	How Biomotors Work	691
10.34	Kinesin – Walk Along	693
10.35	Muscle Powered Nanomachines	696
10.36	Bacteria Power	697
10.37	ATPase – Biomotor Nanopropellers	700
10.38	(Bio) Inspiration	701
	References	702
	<i>Nanofood for Thought – Organic Matrix, Biom mineralization, Biomimetics, Bioinspiration</i>	714

## Chapter 11 Self-Assembly of Large Building Blocks 719

11.1	Self-assembling Supra-micron Shapes	719
11.2	Synthesis Using the “Capillary Bond”	720
11.3	Crystallizing Large Polyhedral-Shaped Building Blocks	721
11.4	Self-Assembling 2D and 3D Electrical Circuits and Devices	721
11.5	Crystallizing Micron-Sized Planar Building Blocks	722
11.6	Polyhedra with Patterned Faces that Autoconstruct	725
11.7	Large Sphere Building Block Self-Assemble into 3D Crystals	727
11.8	Synthetic MEMS?	728
11.9	Contact Electrification – Charging the Balls to Order	729
11.10	Magnetic Self-Assembly	730
11.11	Dynamic Self-Assembly	732
11.12	Autonomous Self-Assembly	735
11.13	Self-Assembly and Synthetic Life	736
	References	737
	<i>Nanofood for Thought – Static and Dynamic, Capillary Bond, Shape Assembly</i>	740

## Chapter 12 Nano and Beyond 743

12.1	Assembling the Future	743
12.2	Do-It-Yourself Microfluidics	744
12.3	One Wire – One Solar Cell	744
12.4	Stretchy Silicon	744
12.5	Inhibiting HIV with Gold	745
12.6	Many-Face Nanocubes	746
12.7	Nanominerals	748
12.8	NanoRockets	748
12.9	Galvanized Nanostructures	749
12.10	Moving Cargoes at the Nanoscale	750
12.11	Writing 3D Goopy Inks	750
12.12	A Mask of Nanowires	751
12.13	Liquid Lasers	752
12.14	Remediating with Nanowires and Nanocrystals	752
12.15	Assembling Nanocrystals via DNA	754
12.16	Graphene – The Prince of Electronics?	754
12.17	Self-Healing Materials	755
12.18	Multiferroics Down Below	755

12.19	Materials Retro-assembly	756
12.20	Matter that Matters – Materials of the “Next Kind”	758
	References	761
	<i>Nanofood for Thought – Nano Potpourri</i>	763
<b>Chapter 13 Nanochemistry Nanolabs</b>		<b>767</b>
13.1	Luminescent Nanoring Array	768
13.2	Ferromagnetic Nanocrystal Array	769
13.3	Zeolite Membrane	769
13.4	Electrochromic Device	769
13.5	Size Reduction Soft-Lithography	769
13.6	Self-assembly of Barcoded Magnetic Nanorods	769
13.7	Carbon Nanotube Field Emitting Display	769
13.8	Photoconducting Selenium Nanowires	770
13.9	Metal Colloids	770
13.10	Metal–Nonmetal Transition	770
13.11	Near Infrared Emitting Quantum Dots	770
13.12	Nanocrystals in Nanobeakers	770
13.13	Colloidal Photonic Crystal Fingerprinting	770
13.14	Colloidal Crystal Capillary Column	771
13.15	Low Dielectric Constant Film	771
13.16	Block Copolymer Lithography	771
13.17	Virus Mineralization	771
13.18	Biological Structures and Templates	771
13.19	Mesoscopic Self-Assembly	772
13.20	Colloidal Crystal Shapes	772
<b>Appendix A: Origin of the Term “Self-Assembly”</b>		<b>773</b>
<b>Appendix B: Origin of the Nanochemistry</b>		<b>779</b>
<b>Appendix C: Cytotoxicity of Nanoparticles</b>		<b>781</b>
<b>Subject Index</b>		<b>785</b>
