

## Cumulative Index to December 2010

<b>Topic</b>		<b>Brief No.</b>	<b>Topic</b>		<b>Brief No.</b>
$\sigma_p$	see target value	-	Calibration	with reference materials	10
Accreditation	and proficiency testing	11	Calibrators	evenly spaced	27
Accuracy etc	definitions	13	Calibrators	logarithmically spaced	27
Aflatoxin M1	in milk	4	Certification	MCERTs scheme for	33
Aflatoxins	total aflatoxins	30	Characterisation	Of nanoparticles	48
AMC Recommendation	recovery factors	21A	Chicken	nitrogen factors for	7
Analysers	elemental	29	CHNS	analysers	29
Analysis	non-destructive	21	Collaborative trial	and Horwitz function	17
Antibodies	Structure, monoclonal, polyclonal	44	Collaborative trials	and uncertainty	15
Arguments	for and against recovery correction	21A	Complex statistics	and the bootstrap	8
Asbestos	Optical properties, identification	43	Concentration	near zero	26A
Assigned value	bias in	11	Concentration	of uncertainty	11
Assigned value	in GMO proficiency testing	18	Confidence limits	'inverse'	22
Autocorrelation	In continuous monitoring	47	Confidence limits	by the bootstrap	8
Baseline	interference	37	Confidence limits	fiducial limits	22
Bayesian statistics	example	14	Confidence limits	on estimated concentrations	22
Beef	nitrogen factors for	7	Confounding	factors	36
Bias	in assigned value	11	Continuous monitoring	strategy	47
Bias	long-term in z-scores	11	Control charts	in proficiency testing	11
Bias	sampling	31	Control charts	multiple univariate	16
Bias between methods	and functional relationship	10	Control charts	trends, and the J-chart	12
Binomial distribution	in GMO proficiency testing	18	Control limits	setting	46
Blocking	and experimental design	26	Control materials	Choice of type and number	46
Bootstrap	estimators	8	Correction	for recovery	21A
Calibration	and uncertainty	22	Correlation coefficient	and covariance	30
Calibration	calibration design	27 3	Correlation coefficient	and independence	30
Calibration	calibration function	27	Correlation coefficient	and linearity	3
Calibration	calibration set	27	Correlation coefficient	and uncertainty	30
Calibration	heteroscedastic	27	Costs	of measurement	32 20
Calibration	in a regulated environment	28	Covariance	and correlation	30
Calibration	lack of fit	3	Covariance	taking account of	30
Calibration	linearity	3	Crocidolite		43
Calibration	log range	27	Cusum charts	J-chart as alternative	12
Calibration	minimising uncertainty of <i>c</i>	22	Data redundancy	In continuous monitoring	47
Calibration	short range	27	Decisions	involving uncertainty	32 20 42
Calibration	standard additions	22	Decisions	optimal	20
			Definitions	accuracy, precision and uncertainty	13

<b>Topic</b>		<b>Brief No.</b>
Design	see experimental design	-
Detection limit	definition	5
Detection limit	degradation of	27
Detection limit	results near	5
DNA	basics, for the analyst	35
DNA	in GMO proficiency testing	18
Duplicate method	to determine sampling uncertainty	31 40
Duplicated results	control chart for	9
EDXRF	principles, instrumentation	21
Elemental analysers	CHNS	29
ELISA	Basic principles	44 45
EM algorithm	for mixture models	23
Empirical methods	of analysis	21A
End-users	of analytical data, needs of	19A
Energy-dispersive x-ray fluorescence	see EDXRF	
Environment Agency	and certification	33
Enzyme-linked immunosorbent assay	See ELISA	
Estimation	of uncertainty from sampling	40
Eurachem	Guide	31
Experimental design	and optimisation	24 26A 36
Experimental design	basics	24
Experimental design	factorial, fractional factorial	24
Experimental design	in HPLC	36
Experimental design	Screening design	36
Factors	controlled, additive, interactive	24
Factors	uncontrolled, confounding	26 36
False compliance	and uncertainty	32
False non-compliance	and uncertainty	32
Fearn test	for sufficient homogeneity	17A
Fitness for purpose	and Horwitz function	17
Fitness for purpose	and measurement costs	32
Fitness for purpose	and sampling	32 31 16A
Fitness for purpose	and $z_L$ -score	2 11
Fitness for purpose	control chart for	9
Fitness for purpose	in a regulated environment	28
Fitness for purpose	in environmental studies	33
Fitness for purpose	in GMO analysis	18
Fitness for purpose	specification with a fitness function	19A

<b>Topic</b>		<b>Brief No.</b>
Fitness function		19A
Fractional	Factorial designs	36
Functional relationship	with error on both variables	10
Games	training	20
Genetically modified organism	and proficiency testing	18
GMO	see genetically modified organism	
<i>Goldmine</i>	game to investigate analytical strategy	20
Gravimetric methods	precision of	25
Hand-held	analysers	41
Harmonised Protocol	$z_L$ -score	2
Heterogeneity	of sampling targets	31
Histogram	problems with	4
Homogeneity	sufficient	17A
Horwitz	'trumpet'	17
Horwitz	Dr William	17
Horwitz function	and fitness for purpose	17 19A
Huber's H15 method	for robust mean and standard deviation testing	6
Hypothesis	testing	38
Immunoanalysis	And antibodies	44
Importance	in statistical testing	38
Increments	in sampling	32 31 19
Informative prior	in Bayesian inference	14
In-situ analysis	XRF, applications	41
Interaction	between factors	36
Interlaboratory studies	Fairbairn (1951) data	25
Interlaboratory studies	proficiency testing	18
Internal quality control	and duplicated results	9
Internal quality control	failings in	11
Internal quality control	In routine analysis, setting control limits	46
Interpolation	in calibration	22
IQC	See internal quality control	
J-chart	and cusum charts	12
J-chart	for detecting trends in control charts	12
J-charts	multiple univariate	16
Kernel density	to represent data	4
Lack of fit	in linear calibration	3
Lack of fit	near zero concentration	5
Lagrange multiplier	and fitness for purpose in sampling	32
Lamb	nitrogen factors for	7
Latin squares	and experimental design	26

<b>Topic</b>		<b>Brief No.</b>
LC-MS	instrumentation for	34
Less than results	and reporting	5
Lettuce	nitrate content of	32
Limits, natural	and uncertainty	26A
Linearity	and correlation coefficient	3
Linearity	in standard additions	37
Linearity	of calibration	3
Liquid chromatography	coupled with MS	34
Lognormal distribution	in GMO proficiency testing	18
Log-transformation	in GMO proficiency testing	18
Losses	long- and short-term	32
Lower level of interest	and fitness for purpose	19A
Marginal	recovery	21A
Mass spectrometry	coupled with LC	34
Maximum likelihood	in functional relationship	10
Maximum likelihood	in mixture models	23
MCERTS	Environment Agency	33
Measurement	sampling and analysis	16A
Median-MAD method	for robust mean and standard deviation	6
Microscopy	Of asbestos	43
Mixture models	to represent features in data	23
Modes	number of in data	4 23
Monitoring	continuous	47
Multimodal distributions	mixture models for	23
Multiplicative errors	in GMO analysis	18
Mutton	nitrogen factors for	7
Nanoparticles	Definition, properties, sources, characterisation, toxicology	48
Natural limits	confidence intervals and uncertainty near	26A
Negative results	recording and reporting	5
Nitrate	in lettuce	32
Nitrogen factors	and protein content	7
Nucleotides	in DNA	35
Optimising	uncertainty	32
Outliers	and robust estimation	39
Outliers	and robust statistics	6 39
Outliers	how to tackle	39
PCR	see polymerase chain reaction	18
PDF	see probability	
Polymerase chain reaction	in GMO analysis	18

<b>Topic</b>		<b>Brief No.</b>
Polyunsaturated fatty acids	in cooking oil	4
Pork	nitrogen factors for	7
Portable	EDXRF	41
Posterior distribution	in Bayesian inference	14
Power	calculations	38
Power	in statistical testing	38
Precision	and calibration	27
Precision	and concentration	9
Precision	in standard additions	37
Precision	sampling	31
Precision	Within-run, between-run, intermediate definitions	46
Precision etc		13
Prior distribution	in Bayesian inference	14
Probability	density function	18
Proficiency test	GeoPT	25
Proficiency testing	and accreditation	11
Proficiency testing	assessing z-scores in the long term	16
Proficiency testing	diagnostic tests in	11
Proficiency testing	do-it-yourself scoring	2
Proficiency testing	log transformation	18
Proficiency testing	summary scores	16
Proficiency testing	z <sub>L</sub> -score	2
Proficiency tests	and uncertainty	15
Proportional	interference	37
Pure error	in calibration	3
Qualification, validation	in a regulated environment	28
Quality control	in sampling	31
Randomisation	and experimental design	26
Rational methods	of analysis	21A
Realistic	uncertainty estimates	15
Recovery	correction for, factors	21A
Reference materials	G1 and W1	25
Reference prior	in Bayesian inference	14
Regression	'inverse'	22
Regression	and calibration	22 27
Regression	simple	22
Regression	violation of assumptions	10
Regression	weighted	27
Regulated environment	instruments and systems in	28
Regulatory decisions	And sampling	42
Relative standard deviation	of skewed distributions	18
Repeatability	control chart for	9
Reporting	'less than' results	5

<b>Topic</b>		<b>Brief No.</b>
Representative	sample	16A 19
Representative	sample	19
Reproducibility	and Horwitz function	17
precision		
Residuals	in regression	3
Robust mean	in GMO proficiency testing	18
Robust statistics	and outliers	6
Rotational	interference	37
RSD	see relative standard deviation	18
Sample	composite	19
Sample	representative	16A 42
Sampling	bias	31
Sampling	definitions	19
Sampling	number of increments	32
Sampling	precision	31
Sampling	stratified	31
Sampling	target	31 16A 19
Sampling	theory of Pierre Gy	31
Scampi	nitrogen factors for	7
Shewhart charts	and J-charts	12
Significance	in statistical testing	38
Significance tests	for outliers	39
Silicate rocks	analysis of	25
Skewed distribution	in GMO proficiency testing	18
Spike	recovery	21A
Standard additions	and linearity	37
Standard additions	and precision	37
Standard additions	method of	37
Standard additions	standard paradigm	37
Standard additions	uncertainty of concentration	22
Standard deviation	for proficiency, see target value	
Standard deviation	of a sum	30
Standard errors	by the bootstrap	8
Strategy	sampling and analytical	20
Sufficient homogeneity	Test for	17A
Summary scores	in proficiency testing, misuse of	16
Suspect values	how to tackle	39
Target	heterogeneity of	31 16A
Target	in sampling	31 16A 19
Target value	and fitness functions	19A
Target value	in GMO proficiency testing	18
Target value	inappropriate	11
Target value	$z_L$ -score	2
$t$ -distribution	truncated, near zero	26A

<b>Topic</b>		<b>Brief No.</b>
Terminology	accuracy, precision and uncertainty in sampling	13
Terminology		19
Test portion		19
Tin	in fruit juice	4
Toxicity	Of nanoparticles	48
Traceability	In IQC	46
Translational	interference	37
<i>Trumpet</i>	Horwitz	17
Uncertainty	analytical	32 26A
Uncertainty	and calibration	22 27
Uncertainty	concentration dependence	11 26A
Uncertainty	empirical, in sampling	31
Uncertainty	from sampling	32 31 16A 42
Uncertainty	GUM method in sampling	31
Uncertainty	is it realistic?	15
Uncertainty	latent contributions to	15
Uncertainty	modification of	32
Uncertainty	near natural limits	26A
Uncertainty etc	definitions	13
Uncertainty from sampling	and regulation	42
Uncertainty from sampling	duplicate method	40
Uncertainty from sampling	software	40
Uncontrolled factors	and experimental design	26
Underestimation	of uncertainty	15
Utility	of an analytical result	20
Variance	of a sum	30
Watson-Crick	model of DNA	35
X-ray fluorescence	energy-dispersive	21
XRF	in situ analysis, performance	41
XRF	portable analysers	41
Zero concentration	and reporting	5
Zeta-score	$z_L$ -score	2 11
$z_L$ -score	fitness for purpose	2
Zone chart	see J-chart	-
$z$ -score	and $z_L$ -score	2
$z$ -Scores	investigation of poor	11
$z$ -Scores	long-term assessment	16
$z$ -Scores	long-term bias in	11
