HISTORICAL DEVELOPMENT AND PRESPECTIVES OF THE SERIES	v
PREFACE TO VOLUME 6	vii
CONTRIBUTORS TO VOLUME 6	xvii
TITLES OF VOLUMES 1–44 IN THE <i>METAL IONS IN BIOLOGICAL SYSTEMS</i> SERIES	xix
CONTENTS OF VOLUMES IN THE <i>METAL IONS IN LIFE SCIENCES</i> SERIES	xxi
<b>1 ORGANOMETALLIC CHEMISTRY OF B<sub>12</sub> COENZYMES</b> <i>Bernhard Kräutler</i>	<b>1</b>
Abstract	2
1. Introduction	3
2. Structure of B <sub>12</sub> derivatives in the Crystal and in Solution	5
3. Redox Chemistry of B <sub>12</sub> Derivatives	19
4. Reactivity of B <sub>12</sub> derivatives in Organometallic Reactions	24
5. Organometallic B <sub>12</sub> derivatives as Cofactors and Intermediates in Enzymes	34
6. Concluding Remarks and Future Directions	40
Acknowledgments	41
Abbreviations	41
References	42

<b>2</b>	<b>COBALAMIN- AND CORRINOID-DEPENDENT ENZYMES</b>	<b>53</b>
	<i>Rowena G. Matthews</i>	
	Abstract	54
	1. Introduction. what is a Corrinoid?	54
	2. Corrinoid-dependent Methyltransferases	56
	3. Adenosylcobalamin-Dependent Rearrangements and Eliminations	84
	4. Concluding Remarks	106
	Acknowledgments	107
	Abbreviations and definitions	107
	References	107
<b>3</b>	<b>NICKEL-ALKYL BOND FORMATION IN THE ACTIVE SITE OF METHYL-COENZYME M REDUCTASE</b>	<b>115</b>
	<i>Bernhard Jaun and Rudolf K. Thauer</i>	
	Abstract	116
	1. Introduction	116
	2. Nickel-Carbon Bond Formation in Free Coenzyme F <sub>430</sub>	119
	3. Nickel-Alkyl Bond Formation in Mcr Upon Inactivation with Alkyl Halides	120
	4. Methyl-nickel Bond Formation in Methyl-coenzyme M Reductase During Catalysis?	123
	5. Observations to be Followed up	129
	Acknowledgments	129
	Abbreviations	129
	References	130
<b>4</b>	<b>NICKEL-CARBON BONDS IN ACETYL-COENZYME A SYNTHASES/CARBON MONOXIDE DEHYDROGENASES</b>	<b>133</b>
	<i>Paul A. Lindahl</i>	
	Abstract	133
	1. Introduction	134
	2. Redox and Catalytic Properties of the A- and C-clusters	137
	3. Evidence for a Ni-CO bond in the A <sub>red</sub> -CO State of the A-cluster	139

4. Evidence for a Ni-CH <sub>3</sub> bond in the Methylated intermediate of the A-cluster	139
5. Evidence for a Ni-C(O)CH <sub>3</sub> bond in the Acetyl intermediate of the A-cluster	140
6. Evidence for a Ni-CO Bond in the C-Cluster	141
7. Evidence for a Ni-C(O)O-Fe Bond in the C-cluster	143
8. Conclusions and Future studies	144
Acknowledgment	147
Abbreviations and Definitions	147
References	147
<b>5 STRUCTURE AND FUNCTION OF [NiFe]-HYDROGENASES</b>	<b>151</b>
<i>Juan C. Fontecilla-Camps</i>	
Abstract	152
1. Introduction	152
2. Hydrogenase Structure	153
3. Hydrogenase Maturation and Active Site Assembly	160
4. Electron Transfer	165
5. Proton Transfer	166
6. Oxidized Inactive States of the [NiFe]-hydrogenase active site	168
7. Substrate Binding and Catalysis	172
8. Concluding Remarks	173
Acknowledgments	174
Abbreviations	174
References	174
<b>6 CARBON MONOXIDE AND CYANIDE LIGANDS IN THE ACTIVE SITE OF [FeFe]-HYDROGENASES</b>	<b>179</b>
<i>John W. Peters</i>	
Abstract	180
1. Introduction	180
2. [FeFe]-Hydrogenase Structure	181
3. [FeFe]-Hydrogenase Spectroscopic Studies	192
4. H-Cluster Model Complexes	195
5. H-Cluster Biosynthesis	199
6. Future Directions	206
Acknowledgments	207

Abbreviations and Definitions	208
References	209
<b>7 CARBON MONOXIDE AS INTRINSIC LIGAND TO IRON IN THE ACTIVE SITE OF [Fe]-HYDROGENASE</b>	<b>219</b>
<i>Seigo Shima, Rudolf K. Thauer, and Ulrich Ermler</i>	
Abstract	220
1. Introduction	220
2. Physiology	222
3. The Iron Guanylylpyridinol Cofactor in The Enzyme-Free State	223
4. Structure of [Fe]-Hydrogenase with and Without The Iron Guanylylpyridinol Cofactor Bound	227
5. Ligands To Iron in The Active Site of [Fe]-Hydrogenase	229
6. Proposed Catalytic Mechanisms	235
7. Concluding Remarks	237
Acknowledgements	237
Abbreviations	237
References	238
<b>8 THE DUAL ROLE OF HEME AS COFACTOR AND SUBSTRATE IN THE BIOSYNTHESIS OF CARBON MONOXIDE</b>	<b>241</b>
<i>Mario Rivera and Juan C. Rodríguez</i>	
Abstract	242
1. Introduction	243
2. The Biosynthesis of Carbon Monoxide	247
3. Heme Oxygenase Favors Heme Hydroxylation Over Ferryl Formation. The Nature of the Ferric Hydroperoxide Complex in Heme Oxygenase	259
4. Heme Oxygenase Dynamics and Heme Breakdown. The Distal Ligand Has a Profound Effect in the Dynamic Behavior of Heme Oxygenase	268
5. The Regioselectivity of Heme Hydroxylation	276
6. Conclusion and Outlook	284
Acknowledgments	285
Abbreviations	286
References	286

<b>9</b>	<b>COPPER-CARBON BONDS IN MECHANISTIC AND STRUCTURAL PROBING OF PROTEINS AS WELL AS IN SITUATIONS WHERE COPPER IS A CATALYTIC OR RECEPTOR SITE</b>	<b>295</b>
	<i>Heather R. Lucas and Kenneth D. Karlin</i>	
	Abstract	296
	1. Introduction	297
	2. Binuclear Copper Proteins	298
	3. Heterobimetallic Copper-Containing Enzymes	317
	4. Non-Blue Copper Oxidases	334
	5. Blue, Green, and Purple Copper Proteins	337
	6. Copper(I) Recognition Sites or Receptors	344
	7. Miscellaneous	346
	8. General Conclusions	349
	Acknowledgments	350
	Abbreviations	351
	References	352
<b>10</b>	<b>INTERACTION OF CYANIDE WITH ENZYMES CONTAINING VANADIUM, MANGANESE, NON-HEME IRON, AND ZINC</b>	<b>363</b>
	<i>Martha E. Sosa-Torres and Peter M. H. Kroneck</i>	
	Abstract	364
	1. Introduction	364
	2. Vanadium Enzymes	368
	3. Manganese Enzymes	373
	4. Non-Heme Iron Enzymes	377
	5. Zinc Enzymes	383
	6. Conclusions	388
	Acknowledgments	388
	Abbreviations	388
	References	389
<b>11</b>	<b>THE REACTION MECHANISM OF THE MOLYBDENUM HYDROXYLASE XANTHINE OXIDOREDUCTASE: EVIDENCE AGAINST THE FORMATION OF INTERMEDIATES HAVING METAL-CARBON BONDS</b>	<b>395</b>
	<i>Russ Hille</i>	
	Abstract	396
	1. Introduction	396

2. Electron-Nuclear Double Resonance Studies of the “Very Rapid” Species	400
3. X-Ray Crystal Structures Relevant to The Reaction Mechanism	404
4. General Conclusions	413
Acknowledgments	414
Abbreviations And Definitions	414
References	414
<b>12 COMPUTATIONAL STUDIES OF BIOORGANOMETALLIC ENZYMES AND COFACTORS</b>	<b>417</b>
<i>Matthew D. Liptak Katherine M. Van Heuvelen and Thomas C. Brunold</i>	
Abstract	418
1. Introduction	419
2. Computational Approaches to Bioorganometallic Chemistry	420
3. Formation and cleavage of the Co–C bond of Cobalamin in Enzyme Active Sites	426
4. Organometallic Chemistry and Catalytic Cycle of Methyl-Coenzyme M Reductase	435
5. Geometric and Electronic Structures of The Carbon Monoxide Dehydrogenase/Acetyl-Coenzyme A Synthase Active Site Clusters	442
6. Magnetic Properties of the Active Site Cluster of Iron-only Hydrogenases	447
7. Concluding Remarks and Future Directions	450
Acknowledgements	452
Abbreviations	452
References	454
<b>SUBJECT INDEX</b>	<b>461</b>
