<b>1</b>	<b>Particle–Wave Duality</b>	<b>1</b>
1.1	Introduction	1
1.2	Particle Properties of Electromagnetic Waves	3
1.3	Wave Properties of Matter	12
1.4	Matter Waves	18
<b>2</b>	<b>Particle in a One-dimensional Box</b>	<b>26</b>
2.1	Allowed Wavefunctions and Energies	26
2.2	Normalization	28
2.3	Probability Distributions of the Wavefunctions	29
2.4	Semiconductor Quantum Wells	30
2.5	$\pi$ Electrons in Conjugated Molecules	31
<b>3</b>	<b>Uncertainty Arising from the Wave Nature of Matter</b>	<b>38</b>
3.1	Uncertainty in the Diffraction of Particles	38
3.2	Diffraction of Electrons through Double Slits	41
3.3	Uncertainty with a Particle-in-a-box	42
3.4	Statement of the Heisenberg Uncertainty Principle	42
3.5	Application to an Electron Beam	43
3.6	The Wavefunction of a Localized Electron	45

---

<b>4</b>	<b>The One-dimensional Schrödinger Wave Equation and Some of its Applications</b>	<b>48</b>
4.1	The One-dimensional Schrödinger Equation	48
4.2	The One-dimensional Harmonic Oscillator	50
4.3	Quantum Mechanical Tunnelling	58
<b>5</b>	<b>Rotational Motion</b>	<b>68</b>
5.1	Circular Motion in a Fixed Plane	68
5.2	Rotation in Three Dimensions	74
5.3	Spin	82
<b>6</b>	<b>The Hydrogen Atom</b>	<b>92</b>
6.1	Introduction	92
6.2	The Hydrogen Spectrum and the Quantization of Energy	93
6.3	The Bohr Theory	94
6.4	Formulation of the Schrödinger Wave Equation for Hydrogen-like Atoms	95
6.5	The Radial Wave Equation	96
6.6	The Full Hydrogen Atom Wavefunctions	102
<b>7</b>	<b>Further Concepts in Quantum Mechanics and their Application to Many-electron Atoms</b>	<b>114</b>
7.1	The Hamiltonian Operator	115
7.2	Application to the Motion of a Single Particle	116
7.3	Eigenfunctions and Eigenvalues	116
7.4	The Wave Equation for the Helium Atom	117
7.5	Electron Spin	120
7.6	The Orbital Approximation for Lithium	124
7.7	Electron Shielding of the Nuclear Charge in Many-electron Atoms	125
7.8	The Use of Self-consistent Field Methods to Obtain Atomic Orbitals	127
7.9	Electron Correlation Energy	128
7.10	The Elements of the Periodic Table	128
7.11	Hund's Rule	130
7.12	Ionization Energies of the Elements	131

---

<b>8</b>	<b>The Structure of Molecules</b>	<b>136</b>
8.1	Introduction	137
8.2	Trial Wavefunctions and their Associated Energies	137
8.3	The Variation Principle	138
8.4	The Hamiltonian Operator for the Hydrogen Molecule-ion	139
8.5	The Born–Oppenheimer Approximation	140
8.6	Molecular Orbitals for the Hydrogen Molecule-ion	141
8.7	The Hydrogen Molecule	145
8.8	Molecular Orbitals for Other Diatomic Molecules	149
8.9	Molecular Orbitals for Homonuclear Diatomic Molecules	152
8.10	Application of MO Theory to Heteronuclear Diatomic Molecules	157
8.11	Hybridization in Polyatomic Molecules	159
8.12	Bonding in the Water Molecule	163
8.13	Hückel Molecular Orbital Theory	166
	<b>Answers to Problems</b>	<b>178</b>
