Supplementary Information

General Remarks. All manipulations of oxygen- and moisture-sensitive materials were conducted with a standard Schlenk technique under a purified argon atmosphere. Nuclear magnetic resonance spectra were taken on a JEOL EX-270 (1H, 270 MHz; 13C, 67.8 MHz) spectrometer or a JEOL Lambda-400 (1H, 400 MHz; 13C, 99.5 MHz) spectrometer using residual chloroform (1H) or CDCl_3 (13C) as an internal standard. High-resolution mass spectra were obtained with a Hitachi M–80B spectrometer. The preparative recycling gel permeation chromatography was performed with GL Science PU 614 equipped with Shodex GPC H-2001L and -2002L columns (chloroform as an eluent). Column chromatography was carried out using Merck Kieselgel 60. Unless otherwise noted, commercially available reagents were used without purification. THF was distilled from sodium/benzophenone ketyl. 18-Crown-6 was recrystallized from distilled MeCN. KF (spray-dried) was vacuum dried at 100 °C for 12 h.

Aryne Precursors. 2-(Trimethylsilyl)phenyl triflate (1a), 3-(trimethylsilyl)-2-naphthyl triflate (1b), 4,5-dimethyl-2-(trimethylsilyl)phenyl triflate (1c), 6-(trimethylsilyl)-5-indanyl triflate (1d), and 3,6-dimethoxy-2-(trimethylsilyl)phenyl triflate (1e) were prepared according to literature procedures. 3-methoxy-2-(trimethylsilyl)phenyl triflate (1f) and 4-methyl-2-(trimethylsilyl)phenyl triflate (1g) were prepared according to literature procedures.

β-Dicarbonyl Compounds. All β-dicarbonyl compounds were commercially available, except for 2e and 2f, which were synthesized from the corresponding diols and malonyl dichloride by a literature method.

Reaction of Arynes with β-Dicarbonyl Compounds. A General Procedure. To a THF solution (4.0 mL) of 18-crown-6 (0.127 g, 0.48 mmol), 1 (0.24 mmol) and 2 (0.20 mmol) was added KF (0.028 g, 0.48 mmol), and the resulting mixture was stirred at room temperature for the time specified in Schemes 1 and 2. The mixture was diluted with ethyl acetate, filtered through a Celite plug, washed three times with brine and dried over MgSO_4. Evaporation of the solvent followed by silica-gel column chromatography or gel permeation chromatography gave the corresponding product.
